## MANAGEMENT SUMMARY

---

From August through October 2007 Chrysalis Archaeological Consultants (Chrysalis) undertook the monitoring of infrastructural upgrades at Dyckman Farmhouse (Dyckman), New York, New York (Figure 01) on behalf of Quigg Development (Quigg), the City of New York Department of Parks and Recreation (Parks) and the Historic House Trust of New York City (HHT). Quigg was contracted by Parks to undertake all work defined in Project Number: MG6-07M.

The Cultural Resource Request for Proposal called for archaeological monitoring of subsurface excavation work due to the historic nature of the property and the sensitivity demonstrated by previous archaeological investigations.

The purpose of the investigation was to: 1) determine whether the project area contained prehistoric and/or historic resources, 2) determine if additional archaeological work was needed for any resources located during the monitoring; 3) develop a historical and archaeological context(s) for interpretation and evaluation of any archaeological resources that may have been present within the areas of potential effect (APE); and 4) provide all necessary services related to the cultural resource process during the overall project at the Dyckman Farmhouse.

All work was conducted in accordance with the National Historic Preservation Act of 1966, as amended, and the Advisory Council on Historic Preservation's "Protection of Historic and Cultural Properties" (36 CFR 800). This study was conducted pursuant to the *Standards for Cultural Resources Investigations and the Curation of Archaeological Collections in New York State* (NYAC 1994) and the City of New York - Landmarks Preservation Commission's (LPC) Guidelines for Archaeology. Alyssa Loorya, M.A., R.P.A. served as Principal Investigator for the project.

Two areas, A and B, were excavated for infrastructural improvements. A small amount of historic material remains were uncovered from disturbed contexts. The material remains cannot be directly related to the occupation and/or activities at the Dyckman house. Rather, they appear to have been redeposited due to previous ground disturbances.

Based on the stratigraphic record and the material remains recovered, no further archaeological testing should occur in the areas that this project excavated. However, if future excavations are proposed in areas that were not monitored as part of this project, monitoring and/or testing should occur.

## ACKNOWLEDGEMENTS

---

The authors wish to thank Quigg Development Corporation, the New York City Department of Parks and Recreation and the Historic House Trust of New York City for the opportunity to work on this project. We would also like to thank Dr. H. Arthur Bankoff, Archaeological Advisor to the Chair at the New York City Landmarks Preservation Commission for advice, comments and consultation.

## I. Introduction

From August through October 2007 Chrysalis Archaeological Consultants (Chrysalis) undertook the monitoring of infrastructural upgrades at Dyckman Farmhouse (Dyckman), New York, New York (Figure 01) on behalf of Quigg Development (Quigg), the City of New York Department of Parks and Recreation (Parks) and the Historic House Trust of New York City (HHT). Quigg was contracted by Parks to undertake all work defined in Project Number: MG6-07M.

**Figure 01: Dyckman Farmhouse**

The Cultural Resource Request for Proposal called for archaeological monitoring of subsurface excavation work due to the historic nature of the property and the sensitivity demonstrated by previous archaeological investigations.

The purpose of the investigation was to: 1) determine whether the project area contained prehistoric and/or historic resources, 2) determine if additional archaeological work was needed for any resources located during the monitoring; 3) develop a historical and archaeological context(s) for interpretation and evaluation of any archaeological resources that may have been present within the areas of potential effect (APE); and 4) provide all necessary services related to the cultural resource process during the overall project at the Dyckman Farmhouse.

All work was conducted in accordance with the National Historic Preservation Act of 1966, as amended, and the Advisory Council on Historic Preservation's "Protection of Historic and Cultural Properties" (36 CFR 800). This study was conducted pursuant to the *Standards for Cultural Resources Investigations and the Curation of Archaeological Collections in New York State* (NYAC 1994) and the City of New York - Landmarks Preservation Commission's (LPC) Guidelines for Archaeology. Alyssa Loorya, M.A., R.P.A. served as Principal Investigator for the project.

## II. The Project

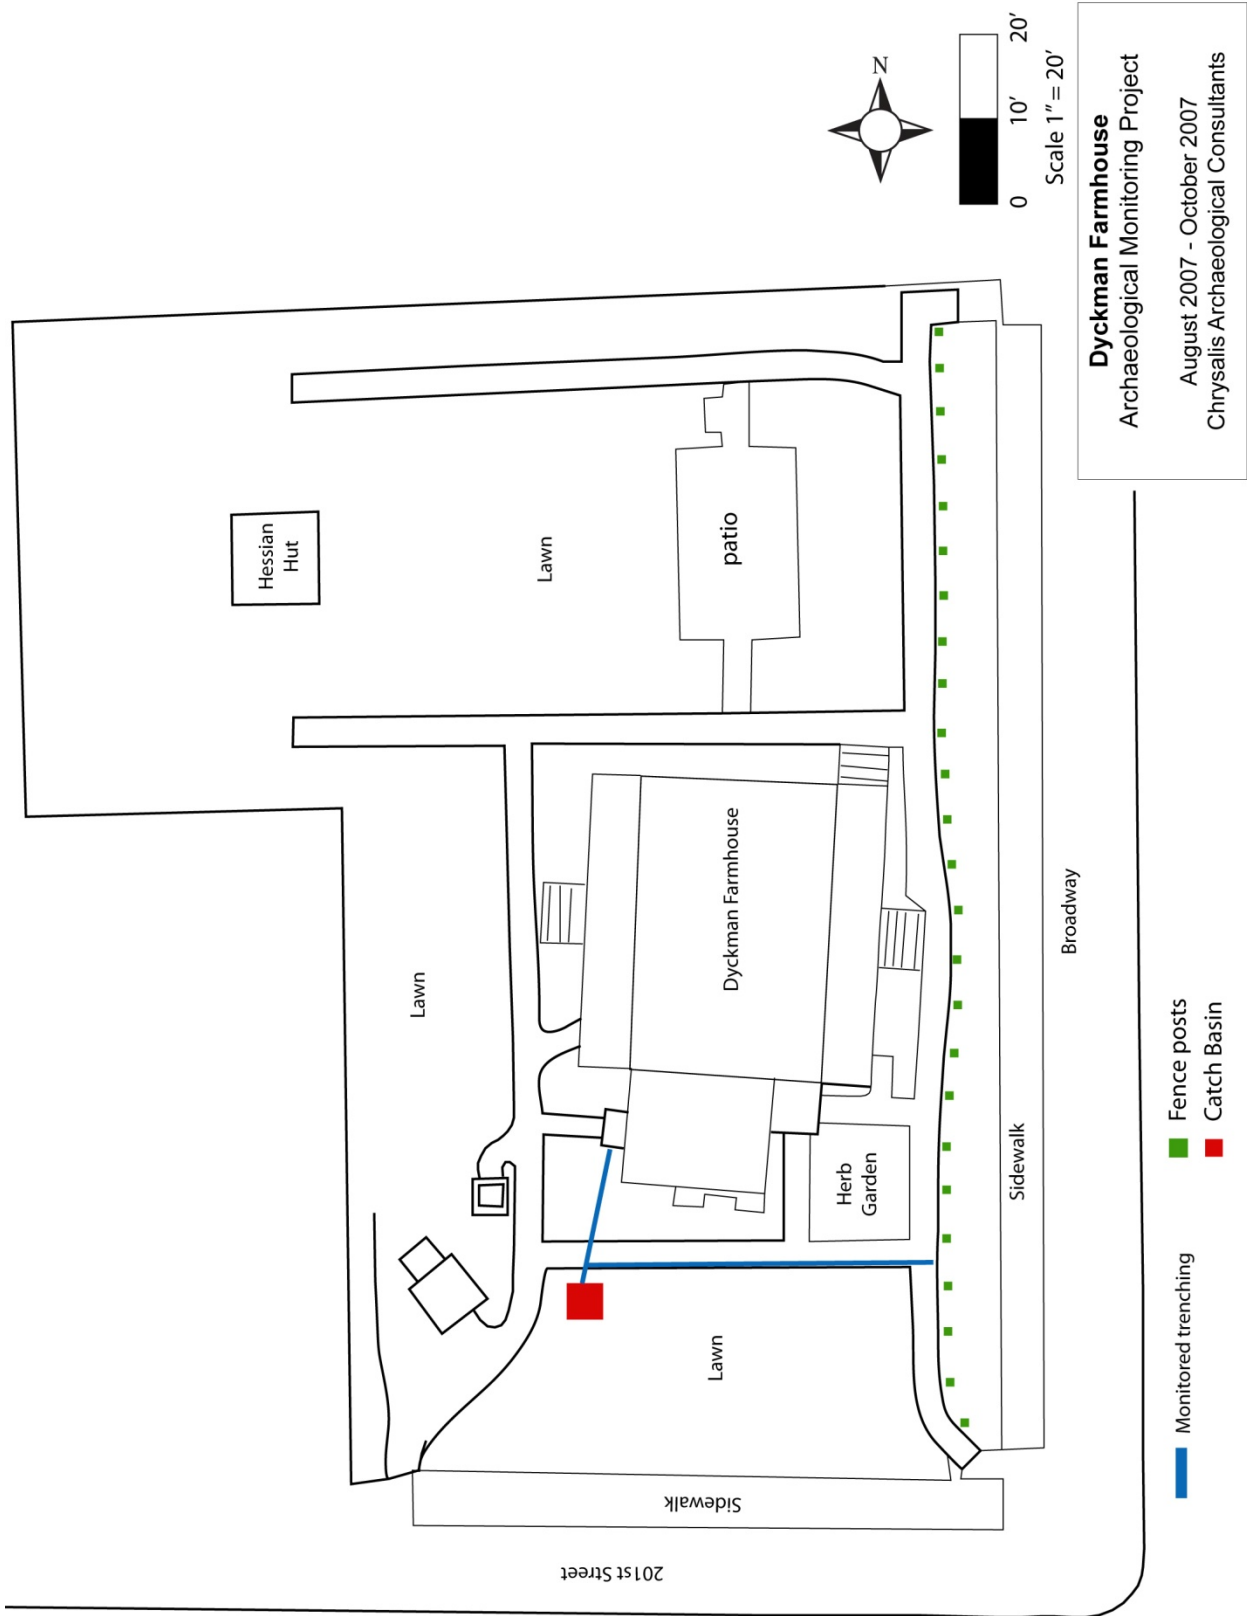

The Dyckman Farmhouse/Park is located at West 204th Street and Broadway in New York (New York County), New York (Figure 02). The project plans called for irrigation improvements to the property and the installation of a new barrier fence (Figure 03).

The proposed irrigation line was installed from the Farmhouse to the Broadway property line and included a catch basin adjacent to the brick path along the southern side of the house. A barrier fence was installed along the outer perimeter of the brick path on the Broadway side of the property. This would provide added safety and security from the current steep incline to street level.

Figure 02: Dyckman Farmhouse/Park location

**Figure 03: Project Map**

### **III. Previous Archaeological Undertakings**

A Phase I Documentary Study and Field Monitoring Report was completed by Linda Stone (Stone 2003).

Stone's brief report documented the prehistoric and historic history of the site. Her report concluded that there is a high potential for the recovery of prehistoric and historic materials (Stone 2003).

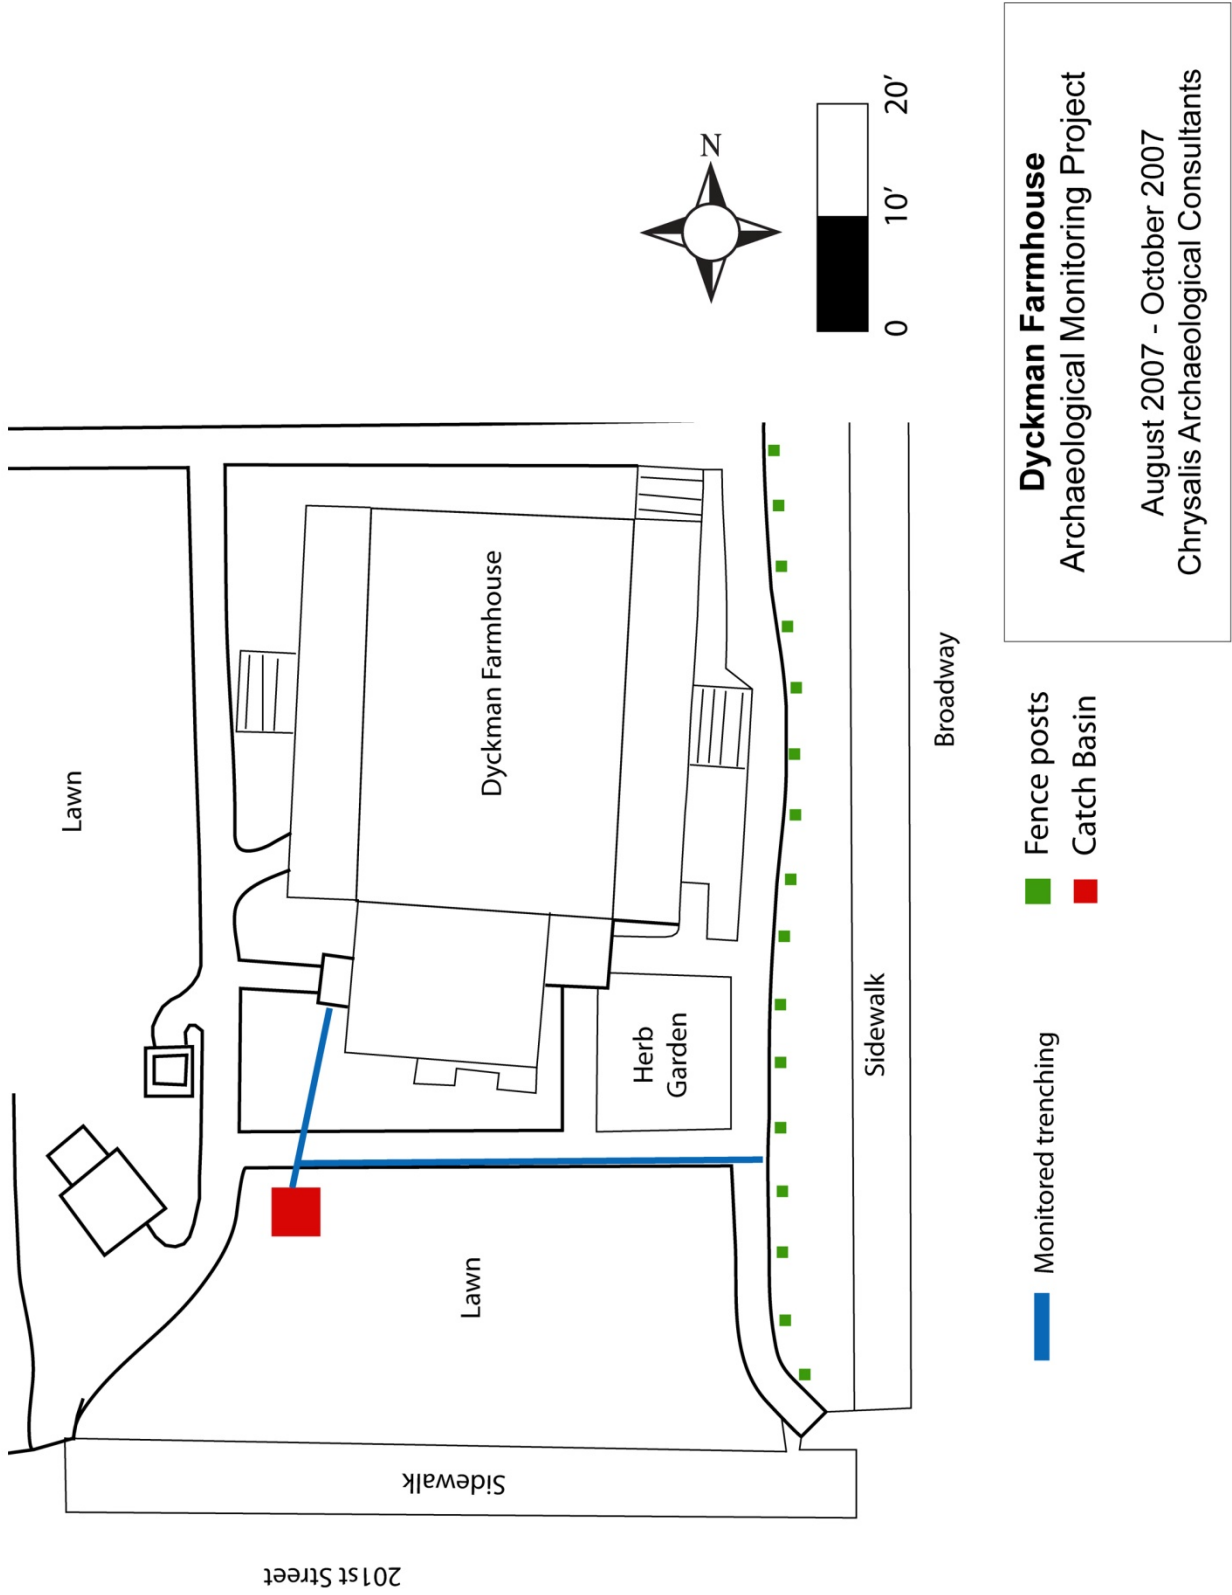

The area was widely occupied during the prehistoric period. Several documented Native American sites lie within a half mile of the project area. During the American Revolutionary War, several skirmishes took place in the area and enemy soldiers encamped nearby. In 1784, William Dyckman constructed the Dyckman Farmhouse (Figure 04). It was once part of a large farm of more than 250 acres. The house has been a public museum since 1916 (Stone 2003).

**Figure 04: Shed to Dyckman House**

Stone monitored the installation of new utility lines between the house and street in 2003. Although no significant artifacts were uncovered, she concluded that any future subsurface excavation(s) should be monitored due to the high potential for the recovery of prehistoric and historic materials as based on the documentary study (Stone 2003).

The current contract did not require additional documentary research.

**Figure 05 – Detailed site map of excavated areas**

#### **IV. Archaeological Monitoring**

Archaeological monitoring occurred in two phases. Phase 1 monitored excavation for the new irrigation line (Area A) and the second monitored excavation for the proposed fence footings (Area B) (see Figure 03 – the overall site map and Figure 05 – close-up site map of the monitored area)<sup>1</sup>.

##### *Area A*

The trench for the new irrigation line measured approximately eight-five feet long (85') and approximately one foot (1') wide. It was excavated to an approximate depth of eighteen to twenty-four inches (18" – 24"). The depth was modified in some areas to obtain the proper pitch for the irrigation. All excavation was undertaken manually (Figure 06).

Overall, excavation of this area was without incident. The first ten to twelve inches (10" – 12") was composed of dark grey organic topsoil (10YR 3/1). This layer appears to have been repeatedly turned over due to the extensive plantings that form the landscape of Dyckman. Plantings include shrubs, particularly lavender with has a dense root system, and bulbs. The second stratum consisted of lighter brown loamy subsoil (10YR 4/3).

No artifacts were recovered from this portion of the excavation.

**Figure 06: Area A excavation**

---

<sup>1</sup> See Appendix C for additional images of field monitoring.

As part of this new installation two areas required slightly more substantial excavation. Adjacent to the rear of the house a larger two by two foot (2' x 2') area was excavated to install and upgrade the water connection. This area was previously excavated for earlier utility connections. As such, there was no impact to primary contexts (Figure 07). No artifacts were present in this area.

**Figure 07: Water connection – concrete junction box**

The connection of this area to the new irrigation trench crossed the brick path along the southern side of the house. Quigg tunneled under the path to avoid disturbing the ornamental brick work (Figure 08). The two strata were identical to those discussed above.

**Figure 08: Tunneling underneath the brick path**

An area for a catch basin, measuring four by four feet (4' x 4') was excavated on the southern side of the brick path. This area was excavated to an approximate depth of four feet (4'). Three distinct strata (Figure 09) and an ash lens (Figure 10) embedded in stratum II were uncovered in this trench (Figure 11).

- |             |   |
|-------------|---|
| Stratum I   | dark grey organic topsoil (10YR 3/1).                                     |
| Stratum II  | a brown loamy surface (10YR 4/3).   |
| Stratum III | a lighter brown clayey loam (10YR 4/6)                                    |
| Ash Lens    | a thick ashy lens imbedded in Stratum II (2.5Y 2.5/1 mixed with 2.5Y 6/1) |

**Figure 09: Catch basin excavation**

**Figure 10: Catch basin excavation showing the ash lens**

Dyckman Farmhouse  
Catch Basin

Figure 11: Stratigraphic record of catch basin pit

Within stratum II, and in association with the ash lens, a small number of artifacts were recovered (Table 01). These included a shard of salt-glazed stoneware, a green edge-ware shard (1775-1840), blue painted pearlware (1775-1820) and clam shell.

<b>Amount</b>	<b>Type</b>	<b>Date Range</b>
2	Clam Shell	
2	Fire Cracked Rock	
1	Coal	
1	Earthenware - Redware - Flower Pot Rim	17th-20th Century
1	Earthenware - Whiteware - Body	1850-1900
1	Earthenware - Ironstone - base	1840-1860
1	Earthenware - Pearlware - Shell Edged Green rim	1800-1820
1	Earthenware - Pearlware - Painted Blue body	1792-1820
1	Stoneware - Salt Glazed with Incised Blue lettering "ARD STO"	1700-1750
1	Porcelain - base	19th-20th century

**Table 01: Material Remains recovered from Area A: Catch Basin**

**Figure 12: Area B set up**

*Area B*

This area was excavated for the installation of footings for the proposed barrier fence. Footings were installed along the entire length of the brick pathway on the Broadway side of the property (Figure 12).

Postholes for the footings were placed six feet (6') apart for a total of twenty-five postholes. Measuring one by one foot (1' x 1') the postholes were excavated to a depth of thirty inches (30"). All excavation occurred manually (Figure 13).

**Figure 13: Area B – excavation of post holes**

A few of the postholes had one or two artifacts. All of these artifacts were out of context and likely the result of the repeated turnover of soil due to the extensive landscaping in parts of the property. Among the artifacts recovered were a shard from a nineteenth century embossed water/soda bottle, a piece of slate, a shard of porcelain and blue transfer-print shard (1800-1840) (Table 02).

Amount	Type	Date Range
1	Slate	
1	Bone	
1	Glass – purple molded bottle glass fragment	19th Century
1	Glass – clear molded bottle glass rim fragment	19th Century
1	Earthenware - Pearlware – transferprinted blue cup body	1790-1820
1	Earthenware - Whiteware – Body - polychrome	Post 1860
1	Earthenware - Whiteware – Body	Post 1860
1	Porcelain – cup body molded	19th-20th century

**Table 02: Material Remains from within Area B**

In posthole # 10 a yellow PVC gas line was uncovered (Figure 14). This line extended alongside the path appearing in postholes #10 through #18.

**Figure 14: PVC gas line uncovered in Posthole #10**

Further indicative of the disturbance due to repeated plantings, several of the postholes exhibited vastly different soil types, and none exhibited more than two strata. All the posthole units had the same dark organic topsoil as their first stratum. Others had light brown sandy soil (Figure 15) or dark grayish subsoil (Figure 16). The variation is likely due to soil preparation for the various shrubs that line the walkway. Among the plantings are several lavender, naturalized blue hyacinth, rose and thyme.

Although excavation for the installation of shrubbery was included in the overall project Scope of Work, based on the location and in-field results (i.e. the uncovering of the PVC gas line), it was the determination of Quigg, Parks and HHT that no further monitoring of that area was required. Chrysalis remained on call during that period in case questions arose during excavation.

**Figure 15: Typical soil stratum within the Postholes**

**Figure 16: Typical soil stratum within the Postholes**

#### V. Conclusions and Recommendations

During this project, no intact, stratigraphic and/or archaeological material cultural level(s) were uncovered. The material remains were clearly disturbed and indicates previous ground disturbance has occurred on site.

The history of the Dyckman property, and the area in general, dates back beyond the Contact and post-Contact period of New York City. Although monitoring during this particular project, as with Stone's work, did not reveal substantial buried cultural resources, the possibility still exists that undisturbed buried cultural material remains, features and/or stratigraphic levels may still present on site and could be disturbed by future excavation(s).

The areas tested during this project are devoid of significant cultural deposits. However, it is recommended that cultural resource monitoring continue to be required for all future excavation work in the areas of the property that were not subjected to monitoring during this project to insure that potential in situ/undisturbed areas are recorded and/or mitigated.

Re: Proposal - Phase IB Cultural Resource Monitoring of the Dyckman Farmhouse Project (MG607M) City of New York - Department of Parks and Recreation, Broadway and 208th Street, New York (New York County), New York.

Dear Ms. Quigg:

My name is Alyssa Loorya, President of Chrysalis Archaeological Consultants, Incorporated (CAC). My firm is a fully licensed and insured, female owned, small business holding membership with the Register of Professional Archaeologists (RoPA). We are listed on the approved list of Cultural Resource Management (CRM) firms for the New York City Landmarks Preservation Commission (LPC) and the New York State Office of Parks, Recreation and Historic Preservation (NY SHPO).

Thank you for contacting Dr. Christopher Ricciardi and myself, with regard to the Request for Proposal (RFP) for a Phase IB Cultural Resource Monitoring Project at the Dyckman Farmhouse in New York, New York (City of New York - Department of Parks and Recreation's Project Number: MG6-07M). Having worked within the field of CRM for over a decade, CAC has completed numerous projects for both LPC and NY SHPO. More recently, we worked with Quigg Development Corporation (Quigg) at Wyanda Park in Queens, New York.

As outlined in the Archaeological Monitoring Specifications, sent to CAC by Quigg, and detailed by the City of New York - Department of Parks and Recreation (Parks), the following tasks are required:

1. Review of previous Phase IA Documentary Report(s) - to be supplied by Parks
2. Produce an Archaeological Monitoring Proposal (Research Design) based upon the projected construction project - project information to be supplied by Parks and Quigg
3. Monitor the excavation portion of the overall project
4. If necessary, conduct laboratory analysis on material remains that may be recovered
5. If necessary, specific specialists will be called upon to assist in excavation, conservation and analysis material remains
6. Produce a draft and final report, including a Mylar map of the archaeological project area

4110 Quentin Road Brooklyn, New York 11234-4322  
Phone/Fax: (718) 645-3962 • Mobile: (347) 922-5581  
info@chrysalisarchaeology.com • www.chrysalisarchaeology.com

---

#### Schedule:

Based on our phone conversation from August 8, 2007, the project is to commence next week. CAC is prepared to be on site for excavation, however Item 2: Archaeological Monitoring Proposal/Research Design the RFP states that a monitoring plan must first be approved by the LPC prior to work commencing. We can have the document ready for LPC review within a day or two, as soon as a contract between CAC and Quigg is signed and project plans/maps are provided by Quigg and Parks so that information can be included in the overall archaeological plan.

CAC staff will be available for field monitoring during the project, including future work. Based on our conversation, and the RFP, the projects calls for a trench to be excavated to a depth of approximately eighteen (18) inches and approximately eighty-five (85) feet long.

CAC is willing to serve "on-call" for any potential future excavation. CAC and Quigg can work on this scheduling as the need arises. Generally, CAC requests 48 hours notice, if possible, prior to scheduled future fieldwork, however, it is understood that, at times, emergency situations do arise.

#### Field Work/Personnel:

I will serve as the Principal Investigator for the Project. CAC also maintains an on-call staff of Field Technicians and Specialists if required. Based on my knowledge of the site, and the proposal, I do not anticipate the need to bring in either Field Technicians or Specialists. However, as requested in the RFP, the following staff is listed so that you are fully informed.

Principal Investigator/Project Manager:	Alyssa Loorya, M.A, R.P.A.
Field Technician(s):	Staff (if required)
Specialist(s)	Various (if required)

CAC has two on call specialists, Dr. Sophia Perdikaris, a Physical Anthropologist and Gary McGowan from CPR Conservation, a conservator. Both have worked with CAC and with Parks in the past and meet the qualifications set for in the RFP. Our Field Technicians have worked for several years and are either R.P.A. or R.P.A. Certifiable. I am enclosing a copy of my resume for your review. It contains the names of references for previous projects completed and currently underway. If you require the resumes of my Field Technicians and/or Specialists, please let me know and I will provide those as well.

Again, at this time, I do not see a need beyond myself on this project.

CAC will prepare draft and final versions of the Phase IB Report upon completion of all field-work and, if necessary, laboratory analysis. It is recommended, although not required, that Quigg review the draft report prior to submission to LPC for official review. Generally Parks does not review the draft report, but if they wish, a digital copy will be sent to them. If LPC has any comments they will be incorporated into the final report. During this phase of the project, CAC will also provide two (2) official copies of the final report and Mylar maps to Quigg for final submission to Parks. Two (2) copies are required by LPC and Quigg will also receive a copy of the final report for your records. Digital copies will also be created for LPC, Parks and Quigg.

If artifacts are recovered, they are the property of Parks and must be returned to them upon completion of the project. The artifacts will be bagged, recorded and placed in archival storage boxes.

If you have any questions with regard to this proposal please contact me at the number(s) listed above.

Once again, thank you for the opportunity to submit this proposal and I hope that we can work together on this project.

Sincerely,

*Alyssa Loorya*

Alyssa Loorya, M.A., R.P.A.  
President

Re: Scope of Work - Phase IB Field Archaeological Monitoring Plan - Dyckman Farmhouse  
Project, New York (New York County), New York - Project Number: MG6-07M

Date: August 13, 2007

**INTRODUCTION:**

The following Scope of Work describes the tasks that will be performed for the Phase IB Field Monitoring Project at the Dyckman Farmhouse Park, New York (New York County), New York. The purpose of this investigation is to: 1) determine whether the project area contains prehistoric and/or historic resources, 2) determine if additional archaeological work is needed for any resources located during the investigation; 3) develop a historical and archaeological context(s) for interpretation and evaluation of any archaeological resources that are or may be present within the areas of potential effect (APE); and 4) provide all necessary services related to the cultural resource process during the overall construction project at the Dyckman Farmhouse.

The proposed investigation will consist of four primary tasks: 1) Monitoring of specified construction areas, 2) archaeological testing, in the event that buried cultural resources are uncovered, 3) all necessary laboratory analysis of material remains, if any are uncovered and, 4) report preparation.

All work will be conducted in accordance the National Historic Preservation Act of 1966, as amended, and the Advisory Council on Historic Preservation's "Protection of Historic and Cultural Properties" (36 CFR 800). This study will also be conducted pursuant to the *Standards for Cultural Resources Investigations and the Curation of Archaeological Collections in New York State* (NYAC 1994) and the City of New York - Landmarks Preservation Commission's (LPC) Guidelines for Archaeology. The cultural resources specialist who will perform this work satisfies the qualifications specified in 36 CFR 61, Appendix A. The Principal Investigator for the project will be an archaeologist certified by the Register of Professional Archaeologists (RPA).

#### PROJECT DESCRIPTION:

A Phase IB Archaeological undertaking is required at Dyckman Farmhouse. The overall project plans call for excavation for a new irrigation pipe from the Farmhouse to Broadway. The trench will be excavated using various mechanical equipment and will be approximately eight-five (85) feet long and two (2) feet deep. The trench will extend around the house and terminate in the garden. Portions of the excavation will be undertaken with a pneumatic drill to avoid disturbing surface features such as concrete and walkways.

#### SUMMARY OF ARCHAEOLOGICAL SENSITIVITY:

LPC determined that the overall project area may be archaeologically sensitive based on previous reports.

#### ARCHAEOLOGICAL MONITORING:

The Scope of Work from the City of New York - Department of Parks and Recreation (Parks) calls for monitoring the excavation of the water line trench. Chrysalis will be on site to monitor the excavation and will be on call if any potential cultural resource is uncovered in an area that was not slated for monitoring.

Excavation trenches will be monitored, recorded, digitally photographed. In the event that cultural materials are uncovered, Chrysalis will temporarily halt excavation, in that area, document and remove the material(s).

If an area of concentrated buried, *in situ*, cultural remains are uncovered, Chrysalis will temporarily halt the excavation in that area and conduct a limited Phase IB Field Test of that area. This will consist of opening a limited number of small test pits approximately one meter (1m) square. The test pits will be excavated by natural strata to the maximum depth of anticipated construction impacts, or where possible, to sterile subsoil. If natural strata cannot be clearly identified, then 10-centimeter arbitrary levels will be used. Soil from each stratum will be screened through 1/4-inch hardware mesh and described in standard USDA terminology, with soil color recorded in reference to the Munsell standard. Soil profiles, if discernible, will be drawn of each shovel test once excavation has reached the limit of the construction impact or sterile soil. Recovered artifacts from excavated contexts will be bagged and labeled according to their unique provenience and transported to the laboratory for processing and analysis. Digital photographs will be taken to document the project area.

Human skeletal remains, if encountered, will not be disturbed. If encountered, Chrysalis will halt construction and notify the City of New York - Departments of Police, Parks, LPC and the New York State Office of Parks, Recreation and Historic Preservation (NY SHPO).

#### FIELDWORK, IF NECESSARY:

Any newly identified sites will be documented as completely as possible. An attempt will be made to define the boundaries of identified sites. However, the Scope of Work from Parks does not allow for full Phase II Archaeological Field Testing. Field work undertaken as part of this Scope of Work would identify the presence and boundaries of the potential site and outline a recommendation for a Phase II field investigation.

#### ARTIFACT ANALYSIS/LABORATORY WORK, IF NECESSARY:

Processing of cultural materials recovered from this Phase IB investigation will commence after fieldwork is completed. All artifacts will be washed, labeled, and catalogued. Recommendations will be made for any artifacts that may require additional conservation efforts. Prehistoric artifacts will be catalogued in terms of material type, form, function and if possible, cultural affiliation.

Historical artifacts will be analyzed in terms of type of material, form, function, and temporal attributes (e.g. Noël Hume 1969, South 1977, and Miller 1991). Detailed analysis will include the identification of the Terminus Post Quem (TPQ) of artifacts for each context. This information will be used to establish which contexts and strata were from the same time periods as well as which assemblages represent primary versus secondary deposits.

All artifacts will be cataloged in a Microsoft Excel database. Final curation of the archeological collection, which includes all associated documentation as well as the artifacts, will be the responsibility of Parks. Any material remains recovered will be packaged and boxed in archival safe materials and returned to Parks upon the completion of the project. It is the legal responsibility of Parks to properly curate the material remains.

#### REPORT:

Upon completion of research, Chrysalis will prepare a comprehensive Phase IB Archaeological Monitoring report that meets the standards and guidelines as set forth by the LPC. This report will be prepared providing details of the results of the field work, an analysis of the collected data, if any, and an assessment of impacts. The report will be fully illustrated with all necessary maps, images and database (if necessary) and will include a bibliography of references.

*Alyssa Loorya*
