The Archaeology of Civil War Era Water Control Systems on the Lower East Side of Manhattan

Data Recovery and Mitigation of the Mid 19th Century Cistern Complex and Associated Features within Lots 58 and 59, Block 378, PSA 4 Project, New York, N.Y.(CEQR 95CHA001M)

I. Preface: Executive Summary:

A. Introduction

This New York City mandated archaeological rescue and CEQR environmental compliance effort has resulted in the unexpected discovery of a well preserved, structurally complex, and otherwise undocumented example of a Civil War era cistern and drain water control system which was found buried and sealed beneath three to five feet of 20 century demolition debris on the Lower East Side of Manhattan. Encountered as part of a staged archaeological sensitivity evaluation process mandated by the New York City Landmarks Preservation Commission, this discovery both highlighted the potential for encountering important archaeological remains beneath modern Manhattan, and provided a unique vertically stratified record of early to mid 19th century history within the Lower East side which simply is not otherwise available through surviving documentary records.

The integrity of the stratigraphic sequence recorded, together with the quantity and quality of the well preserved historic artifacts, has provided an otherwise unavailable and previously undocumented "time capsule" of early New York life, as well as a rich graphic and photographic record which can readily be adopted to provide an educationally appealing museum exhibition and display materials.

The discovery of this large, finely made dry laid stone cistern complex from the pre Croton Reservoir era is also of significance to the broader technical history of potable water supply in Manhattan prior to the installation of municipal water lines. The lack of mortar in the cistern itself and the precision engineering of the associated cut stone and brick drains represent otherwise undocumented examples of sophisticated pre Civil War era water control construction techniques.

The construction of earlier 17th and 18th century cisterns has been well documented archaeologically as a result of numerous excavations into Colonial and Revolutionary War era deposits in Lower Manhattan. Likewise, the technology of late 19th - early 20th century cisterns and privies is well known from the surviving official City archival and documentary

records as key elements in the evolving health history and municipal services of Manhattan. However, in contrast to examples from earlier and later periods, this pre Civil War era cistern complex represents a category of historic water supply technology which was almost completely undocumented in both the historic archival and archaeological records.

The discovery of this early water control structure is not, in retrospect, inconsistent with the archivally based early 19th century land use history of the Lower East side of Manhattan. The former 18th century coastal and tidal meadowlands which bordered the Stuyvesant estate was initially landfilled in the first quarter of the century, reported to have been raised to within circa four feet of modern grade by 1833, was "officially confirmed" as being open for development as of 1834, and reported to have been connected to the Croton Reservoir system through in-street water pipes as of 1852 (Moehring 1981:48; in Rubinson 1993). The archaeology suggests otherwise. Not only did the landfilling process appear to have continued for at least another decade after being 'officially' completed, but the Croton water lines documented in the street as of 1852, do not appear to have been connected to the extant building in this area until after the Civil War.

Specifically, given the reconstructed dates for the sequence of deposits identified below and above the cistern complex, as well as the dates of the artifacts recovered from within the cistern and its associated drains, it has been possible to fix the dates of construction, use, and abandonment for the cistern as being between ca. 1840 and 1867. The entire excavated sequence spanned from the date of the initial filling of the Colonial meadows in the 1820's up through the twentieth century. This tightly refined stratigraphically based chronological sequence has provided a strong basis for pinpointing the historic and technological placement and significance of the Civil War era cistern complex within the history of municipal water use in New York. In essence, not only were the dates of construction and use, as determined by the associated artifacts, significantly earlier than the record had indicated for this section of Manhattan, but the carefully made brick and stone water control and collection system was proven to have been present decades after the published accounts suggested for the initial installation of piped potable water supply systems in this area.

The inconsistency between the purported dates for the installation of piped water versus the archaeological dates established for the site suggests strongly that water was not connected to residences in this area until after the Civil War, at least a decade after the documentary record had previously suggested. In addition to rectifying the ill-defined document based time frame for the advent of piped water on the Lower East Side, the level of preservation encountered within the exposure of the cistern has provided otherwise unavailable documentation of the level of technical and engineering effort early 19th century inhabitants put into the design and construction of cisterns to guarantee clean water prior to the introduction of potable piped water. Finally, as an archaeological monument to early and mid 19th century water engineering technology, this find, together with the over 25,000 artifacts found associated with it, represents the only such example of a cistern of this type

yet discovered in Manhattan, and the earliest scientifically excavated Civil War era remains yet encountered on the Lower East Side of New York City.

The significance of the cistern and its contents derives directly from the level of integrity of the sequence of naturally stratified deposits found associated with, beneath, and above the historic stone and brick cistern complex. Despite the fact that the cistern was built into a 15 foot deep bedding of early 19th century fill deposits, and was found covered by a three foot thick mantle of post demolition 20th building demolition debris, the mid 19th century layers, features, and structural remains found sandwiched between these two major fill deposits were found intact, without disturbance or mixture which could have clouded the chronology and reconstruction of the thousands of datable and diagnostic artifacts found in association within.

In sum, while the purpose of this evaluation has been focused on the documentation and reconstruction of the stratigraphic sequence and artifact based chronology of the site as a primary framework for additional research, the use of quantified data control in general, and the application of descriptive statistics to the computer tabulated data set in particular, has demonstrated the presence of economically relevant shifts in the availability of different artifacts through time over this ca. 40 year period of mid-19th century history.

B. The Excavation and Analysis Sample

The excavation resulted in the recovery of 24,181 artifacts which spanned in time from the late 18th through to the 20th centuries. Out of this total, 10,348, or 43%, of the artifacts came from the fill of the Civil War era cistern. An additional 2,043, or ca. 8.4%, came from unmixed deposits or features which either predated, or dated to the period of use of the cistern before its abandonment. Seven hundred and seventeen historic artifacts were recovered from the fill of two later, late 19th and early 20 century features, and 49 artifacts were recovered from a contemporary pre Civil War era pit, or privy, feature in Lot 59. The balance of the collection came from earlier or later fill deposits excavated from either below or above the buried Civil War era cistern. Of these, only 1732, or 7%, of the total sample came from the excavation of deep deposits of early landfill which underlay the cistern. The final block of excavated artifacts, 9,273 or 38% of the total sample, was recovered from the uppermost fill deposits, the "Late Fill", which post dated and covered over the cistern. While the total collection of nearly 25,000 artifacts was processed, washed, weighed, measured, inventoried, and computer tabulated by natural stratigraphic associations, twenty percent, 5,084, of the collection proved to be diagnostic and datable.

Out of this large total artifact count, and in addition to the recovery and reconstruction of scores of museum quality glass and ceramic vessels, the now dated collection included the recovery and analysis of 6,396 ceramic sherds, 2,291 glass artifacts, 4,476 specimens of animal bone, 731 examples of historic plant and seed remains, 530 clothing related artifacts, mostly buttons, 203 toys (173 marbles), 58 slate and writing related artifacts, 28 historic

coins, and 3 domino gaming tiles. In addition to the high percentage of diagnostic and datable artifacts, the collection was marked by the recovery of large numbers of preserved organic artifacts which included early wooden "Shaker" clothespins, wooden tops with metal tips, well preserved examples of wooden matches, and wooden sewing bobbins.

This entire data set was analyzed within the context of ten major stratigraphic units of contemporaneity, referred to as Components. The composition of these large primary units of analysis were laboriously constructed and compiled through linking the smaller and more numerous basic units of excavation and recording referred to as Contexts. During the fieldwork these smaller contexts were originally segmented both vertically based on visible stratigraphic differences, and horizontally based on the overlay of an artificial five foot grid established to provide initial spacial control over the relative density and distribution of excavated artifacts. The process of stratigraphic analysis and reconstruction involved linking functionally and/or structurally related individual excavation contexts into groups of larger and relatively contemporary Components, which then served as the primary chronological units of analysis and comparison. Each Component grouping of excavation contexts was distinguished based on being physically isolated and definable as distinct from the other major units or Components. Each component, or larger unit of temporal and spacial analysis, in turn represented a specific period or episode of time, and all artifacts within each component, regardless of their original manufacture date, were presumed to have been laid down or deposited at the same time.

In outline, the analytical framework of components provided the basis for discussing the changes which took place within the site both as vertically or time based, and as horizontally or spatially differentiated features, structures, living surfaces, and fill layers which either underlay or covered the intervening mid-19th century structural remains of the cistern complex. Thus in addition to the designation of a block of upper "Late Fill" deposits which covered the cistern complex, the collection was also represented by a sample taken from the sealed and buried underlying "Early Fill" which was initially laid down to fill in and reclaim the former shoreline marsh and meadows of the Colonial Lower East Side. Between these two major fill deposits (upper "Late Fill", and lower "Early Fill"), a total of five additional major stratigraphic Components were distinguished which ranged in date from the post 1830's through to the 20th century (See Table 1). Components I and II represented deposits and features which either predated or belonged to the time of construction of the Cistern. Component IIIa included those contexts and features which related to the actual time of use and operation of the cistern for the collection and control of potable water. Component IV referred to the a number of early to mid 19th century pit features from Lot 59 which were contemporary with the large cistern, but structurally unrelated. Finally Component V was identified to distinguish a number of excavated features which post dated the cistern complex, and which represented late 19th or 20th century additions to the vertically accumulating deposits of the site matrix long after the Civil War era cistern had been abandoned.

What stands out from this field and laboratory investigation is that despite the large number of artifacts recovered from deposits and features associated with the cistern complex, the critical chronological evidence often hinged on only a handful of dated artifacts which indicated initial manufacture dates later than the vast majority of the recovered materials from any one feature, or deposit, or Component. Together, the major components of cistern related artifacts (Components I, IIIa, and IIIb) yielded a total of 11,387 historic artifacts,or 47% of the total excavation sample of 24,181 artifacts, which were processed, inventoried, and individually evaluated for evidence of origins, function, or age. Of these, only 2076, or 8.5% of the total sample for these three components, yielded explicit dates of production for the sample with sufficient clarity to establish the date of the features or deposits they were recovered from. For any single Component, contemporary feature, or structural element, the number of datable artifacts reflecting the true age of deposition was often limited to a handful of diagnostic items (See Table 3a and 5).

This extreme ratio between excavated versus diagnostic artifacts underscores the need for both large samples, and the need to individually evaluate each item recovered, regardless of its aesthetic qualities or completeness. It was the detailed chronological evaluation of each excavated artifact which has provided the necessary evidence to fix the date of construction, use, and abandonment of the historic cistern complex recovered from within the 160 year long occupation tenure at the site.

II. Scope and Background of the Compliance Process

A. Scope and Purpose of the Compliance Process:

This investigation and report addresses the NYC Landmarks Preservation Commission (LPC) mandate for the mitigation of adverse impacts to the pre-Civil War era stone cistern complex and associated features within Lots 58 and 59, Block 378 on the Lower East Side of Manhattan. The investigation was designed to meet both the CEQR and Federal compliance standards for the mitigation of adverse impacts to a potential National Register eligible cultural resource affected by a Federally funded or licensed development program.

The archaeological testing identified a mid 19th century cistern and drain complex found buried and preserved beneath a 2 - 3 foot cap of modern demolition debris in association with some 25,000 Civil War era artifacts in the rear yard portion of what was once Lot 58 of Block 378 (within and beneath the remains of a 16 ft. by 25 ft. rectangular stone structure). In addition, the investigation also resulted in the excavation and documentation of one late 19th - early 20th century privy feature in Lot 59, and a mid to late 19th century pit feature discovered under 2+ feet of post 1930 "modern" fill and demolition debris.

B. The Stratigraphic and Chronological Context

The pre-Croton Reservoir water control cistern structure was found to be totally intact and undisturbed by the subsequent 150 years of later 19th and 20th century building and

demolition activities at the site. No mixed late 19th or 20th century materials were encountered in association with it, and no later building activities had intruded into, or disturbed, the feature in any way.

In addition to structural and stratigraphic integrity, the buried stone cistern was found to contain of circa 15,000 historic artifacts which dated from the 1840's through 1860's which represent what may be the richest and earliest yet identified find of Pre-Civil War and Civil War era historic artifacts from the Lower East Side of Manhattan. The well preserved Civil War era historic artifacts includes bottles with corks, decorated and generally reconstructable ceramic vessels, wooden and metal children's toys, buttons and clothing fasteners, a large sample of datable coins and tokens, a large collection of decorated stone, ceramic, and glass marbles, and a broad range of preserved organic materials including food remains (bone, shell, nuts, and seeds), as well as intact artifacts of wood, leather, and textiles.

This Stage II/III investigation was designed to incorporate several levels of analysis including the reconstruction of site stratigraphy, spatial and stratigraphic relationships of recovered cultural materials and the detailed descriptive and typological analysis of all historic cultural materials. All analyses were performed under the direction of Dr. Grossman in conjunction with specialists utilized for each phase of analysis. Stratigraphic and spatial information was recorded during the field effort, and incorporated into the ongoing field testing strategy. Following the field effort, the stratigraphic and spatial information was included in the artifact inventory database.

During the "first cut" level of analytical effort the recovered artifacts (24,181) were initially segregated into broad categories (ceramics, glass, metal), to identify the material and cultural range of variation from each naturally stratified unit of association, or context. The second phase of the analysis effort focused on the detailed analysis and description of only the "diagnostic" artifacts; those which could be identified as to date, origin, or function. This second more refined stage of the process provided detailed attribute analysis for a total of 5,084, or 21% of the total excavated sample.

C. Background to the Staged Compliance Process: Identification, Evaluation, and Mitigation

The discovery and documentation of the Pre-Civil War cistern complex represents the final stage of a multi phased compliance effort mandated under CEQR and Federal Section 106 compliance regulations of the National Historic Preservation Act which was conducted as an incremental, three stage, site identification, evaluation and documentation, and mitigation process. Based on the findings of an initial Stage 1A documentary sensitivity study by Rubinson (1993), which identified the potential for survival of undisturbed 19th century historic features in the rear yard portions of six lots within the PSA 4 project area, the Landmarks Preservation Commission mandated the need for subsequent Stage 1B presence or absence subsurface archaeological tests within the project parcel. Subsequent to the initial document based study, all phases of the mandated field investigation were undertaken

by the staff of Grossman and Associates, Inc. The excavation resulted in the recovery of a total of 24,181 Civil War era (pre 1865) historic artifacts which provided critical chronological information on the time frame, or dates of construction, use, and abandonment of the early cistern complex.

The initially mandated Stage 1B presence and /or absence field tests were conducted over a seven day period between July 26 and Aug. 3, 1994, and involved a basic machine assisted subsurface investigation of the rear yard areas of six lots to establish the potential presence or absence of surviving 19th Century remains below a 2 - 3 foot cap of recent 20th century demolition debris. The Stage 1B field effort documented the survival of undisturbed an historic stone building foundation, structural remains, and associated cultural deposits and features in only two of the six lots (Lot 58 and a small section of adjacent Lot 59) which warranted further investigation and documentation. The recovery of an 1823 Dutch coin in the matrix of the rectangular dry laid stone foundation wall in the rear of the Lot 58 (although not represented in the archival or cartographic record) appeared to be considerably earlier in construction date than the Stage 1A sensitivity study had documented for the initial date of historic building construction at the rear portion of Lot 58. The initial construction date projected in the pre-field Stage IA documentary investigation was based on surviving City records and suggested a post-1879 construction date (Rubinson 1993).

III. Initial Site Discovery and Evaluation Procedures

A. Introduction

An initial 6 day Presence and/or Absence field testing program was undertaken by Grossman and Associates between July 26 and August 3, 1994. The effort combined the logistical support of Sparrow Construction heavy equipment and operators in tandem with a 6 person archaeological field crew, and established the presence and undisturbed survival of significant early 19th century, post 1823, building remains within only 1 of the 6 lots evaluated, Lot 58. The Stage IB Archaeological presence and absence field testing provided a sufficient level of definition to establish the presence, location, age, and relative stratigraphic integrity of the surviving early 19th century structural remains and deposits to make concrete recommendations for further resource definition, excavation, and evaluation. With the exception of a small 10 by 12 foot corner section of an earlier 19th century wall element within Lot 17, which was recorded and established to be of little or no research potential, the investigation of the 4 remaining lots, Lots 55, 57, 59, and 62, documented that either, no rear yard areas survived the subsequent 20th century building construction, or if present, that no other high integrity, undisturbed, early historic remains survived within their limits. Regardless of the nature of material encountered within each lot, each was exposed, photographically documented, and metrically recorded with a high resolution computer transit system, that documented precise XYZ locations of all structural elements, regardless to time period.

This preliminary field investigation utilized the initial background information provided by the Stage IA sensitivity evaluation (Rubinson 1993) to focus the field effort on only the projected rear lot portions of 6 potentially archaeologically sensitive 19th century lots. While the initial work plan was based on a projected depth of fill of 18 inches, the availability of deep profile exposure cuts as part of the ongoing construction in the adjacent lots to the east, provided clear evidence that the actual depth of modern demolition rubble and fill extended to some 4 feet below grade. Given this increase in actual versus projected fill depth which had to be penetrated to expose the buried 19th century surfaces, the project contractor provided a large backhoe machine with a 34 inch bucket, onto which a flat steel blade was welded to the teeth to facilitate the careful scraping and horizontal exposure of each rear lot test area.

The first phase of the archaeological investigation, conducted over a 3 day period, was dedicated to establishing of the horizontal location of buried rear lot party walls belonging to the most recent phase of late 19th century structures as depicted on available maps. A series of long north-south trenches were cut across map based projections of each of the rear lot areas to an average depth of 3.5 feet to identify the location of the walls, and the presence or absence of basements within the rear of each lot.

This probing and trenching was necessary because once identified in general horizontal extent, each of the surviving rear lot areas (Lot 17, 57, 58, 59, and 62) was fully exposed between the former building and rear lot line wall over an average lateral extent of 25 to 30 feet. The fill removal procedure utilizing the heavy equipment to cut down to within 3 to 6 inches of the projected historic surface or interface. Subsequent exposure activities were conducted with careful horizontal, machine scraping at 1 inch intervals and combined with the manual use of hoes and shovels to clean the interface and expose any features on it.

When encountered, each feature was carefully exposed with both horizontal and vertical control using standard archaeological procedures to document the size, boundaries, structural characteristics, stratigraphic integrity, and approximate time range of each feature investigated. In order to expedite the review and compliance process, as new data became available, the field director Dr. Joel W. Grossman consulted with and briefed both Mr. Buckley Yung of the New York City Housing Authority (NYCHA), and Mr. Dan Pagano of the Landmarks Preservation Commission (LPC) via an in field cellular phone tele-conference call, which facilitated the rapid evaluation and "clearance" of lot study areas throughout the 6 day field investigation. Each Lot was identified as either archaeologically sensitive or not based on the presence or absence level of disturbance or archaeological integrity. The process documented that Lot 55 had been altered in the 20th century, and the size of the building expanded to the rear of the lot which had obliterated the former rear lot area. The process also documented that the former rear yard zone of Lot 59 had been built over with a 20th century cement slab, with only mixed historic and modern debris encountered beneath it.

B. Lot Specific Results

Two lots (Lots 55 and 57) were found to be devoid of surviving historic cultural material and were "cleared" for construction within days of the study. Four lots (Lots 17, 58, 59, and 62) were each found to contain a surviving historic surface and mid 19th Century features beneath the modern cap of 20th Century fill and demolition debris.

1. Lot 55

This Lot was evaluated with a single north-south trench, measuring 50 feet and extending to a depth of 7 feet below modern grade. Lot 55 was found to be devoid of any buried rear yard surface. Only a modern cement rear party wall was identified, which suggested that the former rear lot area had been destroyed by relatively recent building expansion or alteration activities in the 20th century. Following consultation with LPC it was determined that no additional investigation was warranted, and the trench was immediately backfilled to facilitate ongoing construction and mobilization.

2. Lot 57

The exposure of Lot 57 documented the presence of only late 19th century brick and stone/slate slab structural elements associated with modern artifacts and construction debris. No elements of earlier stone wall construction were exposed, and no 19th century artifacts were encountered within the rear of Lot 57. Based on an on-site conference and inspection by members of NYCHA and LPC, it was determined that, once recorded, no additional data recovery activities were warranted, and the lot was filled in as of Tuesday afternoon, August 2, 1994.

3. Lot 17

Lot 17 was one of the 4 lots (out of the 6 tested) found to contain surviving early 19th century structural remains in the form of a ca. 12 by 12 foot wall section in the northeast corner of the lot, which was capped and built over by poured cement and lot party walls at later date (See Figure 2.6 and Figure 2.7). The identification of this wall element was important because it demonstrated that the late 19th century maps and lot lines had changed significantly from those of the early 19th century building locations. The early stone wall corner section of Lot 17 was aligned north-south, circa 8 to 12 feet west of the later cement lot walls. In other words, the archaeological evidence showed that the late 19th century map depictions were inconsistent with the early 19th century conditions. Deep strata cuts in the adjoining lots (Lot 55 to the south and Lot 16 to the west) established that no rear yard elements, or intact sections of the Lot 17 stone wall element survived to the south (Lot 55) or to the west (Lot 16).

Once exposed down to the buried 19th Century surface the archaeological research potential and relative significance of the historic early 19th century stone wall corner section

was investigated through the use of two, 3 by 3 foot, strata control units on either side of the north-south section of the stone wall. The purpose of these strata control tests was to establish three categories of information or criteria for evaluation: 1) the potential presence and stratigraphic integrity of an interior living surface within the stone wall corner section, 2) the presence and potential chronological utility of a possible builder's trench on the exterior of the wall of the building, which would, through the recovery of datable artifacts, document the date of construction, and 3) the potential presence and possible stratigraphic integrity of a living surface containing contemporary cultural materials, which would have dated to the time period of the stone wall construction. The two manually excavated stratigraphic control tests unequivocally documented that none of these criteria or conditions were encountered or found to survive in association with the buried stone wall of Lot 17.

The interior strata control unit on the west side of the wall was excavated to depth of ca. 2.5 feet and exposed the presence of a laminated series of ash and soil fill layers, which pre-dated the construction of the stone wall, and documented the lack of a surviving interior living surface which could be historically associated with the building and period of use of the stone wall. Likewise, the exterior strata control unit documented both the lack of any builder's trench, and the lack of any well defined living surface associated with the stone wall.

In addition to a large number of datable ceramic pipes, the excavation of the interior strata control unit through the pre construction fill beneath the stone wall resulted in the recovery of a copper coin which was electrolytically cleaned and found to date to 1845. This chronological evidence and its stratigraphic position beneath the 19th Century stone building wall establishes that both the underlying fill and the subsequent stone wall construction had been deposited, and built, after 1845. The only other associated historic feature encountered within Lot 17 consisted of a rectangular brick and cement platform with a long basin, or trough down its center, which appeared, from its structural elements and the presence of a cement top, to significantly post date the era of the stone wall.

Based on an on-site conference call between Dr. Grossman and Mr. Pagano of the Landmarks Preservation Commission, it was recommended that, aside from photographic and measured plan and profile recordation of the stratigraphic context and structural characteristics of these elements within Lot 17, no additional data recovery activities were warranted. All elements within Lot 17 were measured with a computer transit and photogrammetrically documented. Once completed, this lot was "cleared" verbally by LPC, and the Lot 17 exposure was filled and compacted as of 7:00 p.m. Wednesday, August 3, 1994.

4. Lot 62

The exposure of Lot 62 documented the presence of an historic surface at a depth of 4 feet below modern grade, which was heavily disturbed by later 20th century construction ac-

tivities. Historic 19th century artifacts were found mixed with modern plastic materials, which strongly suggested that the majority of the rear lot lacked cultural and chronological integrity sufficient to warrant further investigation.

However, in the rear of Lot 62, the field team identified the presence of a stone and brick privy feature, cutting down from a higher (more recent) surface, which was formerly extant ca. 1 foot below modern grade and ca. 2 feet above the disturbed historic surface. This brick privy was found to contain a stone base and an associated brick drain, running underground to the southeast. At the suggestion of LPC, efforts were made to further evaluate the structural and chronological integrity of this feature as a basis for making recommendations concerning the need for additional work. This expanded feature definition process revealed the presence of a later phase of construction, which involved the placement of a metal pipe within the drain feature connected to a more modern sanitary sewer pipe on its exterior. Although limited in volume, the recovery of ca. 1 cubic feet of interior fill, resulted in the recovery of 2 late 19th century Indian Head pennies. When electrolytically cleaned, these late 19th century coins yielded dates of 1874 and 1882, suggesting that the privy was filled and abandoned sometime after 1882, which is consistent in time with the late 19th Century age of the metal and ceramic pipe alterations which intruded into it. The feature was fully exposed both in plan and profile, photographed, and measured in with a computer transit. Based on the level of information recovered, and the fact that the privy was altered in the late 19th and 20th centuries, no additional data recovery or documentation was recommended.

5. Lot 58

Of the six lots investigated, Lot 58 proved to be the most significant archaeologically. The investigation of Lot 58 established the presence of early 19th century brick and stone features, and unmixed deposits of early 19th century artifacts. Once delimited and exposed, the extent of the rectangular stone wall suggested the exclusive presence of only early to mid 19th Century materials in the rear section of this lot. Because of the density of early 19th century artifacts exposed on the buried historic surface 4 feet below modern grade, this area was divided into a grid of 5 by 5 foot horizontal control units, and two, 5 by 5 foot strata control units were initially excavated to establish the nature and stratigraphic integrity of cultural materials within Lot 58. Based on these preliminary test results, it was recommended that this lot be investigated further and mitigated through controlled excavation, prior to clearance for demolition and construction.

6. Lot 59

Upon removal of the 4 foot cap of recent demolition material and fill, the rear portion of Lot 59 was found to contain a cement slab apparently dating to the 1930's which covered all of the former rear yard areas. Heavy machinery was utilized to smash through and remove this cement slab to expose the underlying deposits for archaeological evaluation and

investigation. Once exposed, cleared, and cleaned, it was found that in addition to scattered historic artifacts, that the "sub-slab" deposits were dominated by the presence of modern plastic debris, bottles, garbage, and structural remains. With the exception of a rectangular brick feature at the rear northeast corner of the lot, all parties concurred that no additional work for the majority of the southern or front section of the lot was warranted and it was back filled as of Tuesday, August 2, 1994. It was recommended that the small rear section (northern 15 by 30 feet) of Lot 59 be evaluated and documented as part of the focused data recovery activities being proposed for Lot 58.

IV. The Data Recovery / Mitigation Program

A. Introduction

Following the preparation of a detailed Data Recovery Plan, and a two day mobilization effort, the LPC approved mitigation plan focused on the excavation and documentation of the otherwise unrecorded early stone building and historic features in the rear portions of Lots 58 and 59. The archaeological data recovery phase was completed in eight days of fieldwork between Aug. 31 and Sept. 9, 1994. This concentrated data recovery effort documented the structural details and stratigraphic context of mid and late 19th century features in the rear of Lot 59, and the otherwise undocumented interior surface and deposits of a ca. 16 by 25 foot, dry laid, stone building foundation in the rear of Lot 58, including an intact conical shaped cobble stone cistern which contained some 20,000 Civil War era historic artifacts (See Figures 2.8 through 2.10).

Following the completion of the initially mandated data recovery tasks (excavated with alternating checkerboard grid pattern of 12, 5 by 5 foot stratigraphic control units) down to, and through, the original interior floor of the building, a final deep probe revealed the unexpected discovery of a well preserved and finely crafted 8 foot wide by ca. 5 ft. deep dry laid stone cobble cistern beginning below the level of the foundation wall, 3.5 ft. below modern grade. The cistern was found associated with two buried and well preserved cut stone and brick inlet and outlet drains connected to it. Given the magnitude of the discovery, the buried stone cistern feature was excavated and recorded as an additional level of effort (Change Order 3) beyond the initially mandated and authorized scope of archaeological investigations for Lots 58 and 59.

In terms of the standards and criteria for evaluating the historic and archaeological significance of this discovery, the Pre-Civil War Cistern Complex and the associated stone and brick inlet and outlet drains had unambiguous stratigraphic and cultural "integrity", and clearly demonstrated the potential for adding significant information to the undocumented history of the Lower East Side of Manhattan. As such, given the quality of the artifactual preservation, and the historic and technological significance of the water control cistern complex documented in association with the unmixed sample of historic artifacts which filled the cistern, these artifactual and structural finds clearly meet the criteria (research

potential, integrity, and local significance) for eligibility for nomination to the State and National Registers of Historic Places. Based on these criteria, the subsequent archaeological mitigation was initiated in accordance with the appropriate NYC Landmarks Preservation Commission and Department of Interior Procedures (36 CFR 800) for the proper documentation, stabilization, and interpretation of significant archaeological resources. Consequently, notwithstanding current efforts by the NYC Housing Authority to avoid any future construction related impacts to the now reburied structure, the completed archaeological data recovery program, in tandem with the laboratory processing, stabilization, curation, and analysis of the archaeological collection, has resulted in the mitigation of potential adverse impacts to the information potential and structural integrity of the pre Civil War cistern complex, and as such, constitutes grounds for a "No Adverse Effect" determination by the involved review agencies.

B. Field Procedures and Data Control:

The excavation and documentation of the cistern complex was conducted within a tightly controlled grid-based network of 5 by 5 foot horizontal excavation units. All discrete naturally stratified surface layers, pit features, and fill deposits were excavated and computer recorded as natural stratigraphic units of deposition and association which guaranteed the recovery and documentation of proper chronological units of cultural association and contemporaneity.

All excavation materials were either dry or water screened on site. In addition, a select sample of waterlogged feature fill from the base of the cistern was subjected to flotation recovery procedures to screen for the presence of often minute faunal and floral materials. This micro-recovery process floats and separates small, and often charred, animal and plant remains to the surface of a water filled container within which the heavier soil drops to the bottom. Although it is commonly applied in the investigation of prehistoric sites, but less so for more recent, but generally equally unknown historic period sites, this process resulted in the recovery of large quantities of domesticated and wild animal remains, fish bones and scales, as well as charred and preserved plant, and seed remains, all of which would have passed through the large spring steel, 1/4 inch metal mesh, oscillating field screens.

In addition to documenting the relative stratigraphic sequence and time frame for all excavation levels, features and structural elements, each was precisely recorded in absolute grid location and elevation (XYZ coordinates) to a resolution of 0.01 inch utilizing our computer transit system. All computer transit recorded provenience measurements were then transferred to desktop mapping software and translated into NY State Plane coordinate and elevation data, as depicted on the most recent "as built" Housing Authority project plans.

In tandem with this high resolution computer transit based recordation, all excavated features and structural elements were also photo-documented in 35mm and medium format color slide and print film, with each formal photographic record scaled with vertical and

horizontal rules and identified with computer compatible excavation context and feature numbers on "menu boards". As a final step in the recordation process, once completely exposed and cleaned, the portable protective rain and sun shelters were removed as of September 16th, and the entire complex was photogrammetrically recorded with a wide angle, flat field, Rolleimetric medium format metric camera which provided an encapsulated film based record of the excavated cistern complex from a range of 3D, or XYZ perspectives. An enlarged set of four 11 by 14 inch prints of Rolleimetric records of the finished excavation was delivered to the NYC Housing Authority together with an initial archaeological site map on Friday, Sept 23, 1994.

Finally, as part of this final data recovery effort, the total of ca. 30,000 artifacts (ca. 5,000 from the 5 by 5 foot excavated units, 25,000 from the cistern) have undergone computerized processing and inventory, basic stabilization, conservation, and initial identification aimed at establishing the material range, time frame, function, and origins of the excavated artifacts.

C. Backfilling and Structural Stabilization:

At the request of the Housing Authority, once completely recorded and excavated, the cistern complex was chemically and physically stabilized and backfilled in two stages to provide optimum chemical and physical protection for the Cistern complex. Immediately before reburial, several handfuls of modern coins were spread over the excavated surfaces to serve as time markers to delimit the extent and depth of the 1994 excavation. An initial bedding of eight cubic yards of chemically neutral "red" clay was ordered and manually spread over the exposed cistern and drain elements of protect them from impacts from the subsequent redeposition of heavy rubble fill. Finally, with the assistance of staff and equipment of the Housing Authority, the entire excavation area was backfilled to the level of modern grade on Tuesday, September 27.

D. Laboratory Processing:

All laboratory activity was conducted in compliance with guidelines established by the Department of the Interior for the proper curation of archaeological collections (36 CFR 79 and 66). The objectives of the initial concurrent laboratory procedures was to initially stabilize and prepare artifacts and samples for identification and analysis. This included wet or dry cleaning. Artifacts were washed, using a non-ionic detergent in water, or dry brush cleaned when immersion would otherwise damage fragile objects. At this time any artifactual and contextual data was recorded in order to allow for in-depth research and analysis.

1. Artifact Processing

The initial inventory and processing was intended to provide a preliminary level of quantified control on the nature, range of variation, and number of excavated materials. At this first-cut level, the laboratory procedures was restricted to basic stabilization, coding,

quantification, and initial data entry (or tabulation), of all excavated material by units of natural stratigraphic association (Context Number).

Temporally diagnostic artifacts were labeled with the provenience or context number. The context number initially assigned in the field to each discrete excavation unit, level, or deposit followed the artifacts through the laboratory process as the basic unit of recording and identification. The Context Number is designed so that the "whole number" portion of refers to the excavation unit's provenience within the large site grid system, and the decimal subdivision refers to each vertically distinct natural stratigraphic level within the excavation unit from which cultural materia was recovered.

The resultant computerized database, or artifact inventory, was developed to include the following categories of information:

Context number
Count
Weight
Class
Material
Elements
Further Work
Comments

2. Artifact Labeling, Packaging, and Storage

Depending on size and characteristics, artifacts received at least one or more of a three-staged form of permanent identification. These forms of labeling were:

a. A context number applied directly to the artifact with India-ink. A coat of polyvinyl acetate (PVA), in acetone, brushed on the surface of the artifact prior to the application of the label and another coat applied afterward to protect the ink after it has dried. The PVA undercoat prevents the permanent ink label from penetrating porous objects, and is removable with acetone without damage to the artifact, should future label corrections or additions become necessary.

b. Clearly visible context numbers and all other necessary information were additionally written on the inert polyethylene packaging bag with a waterproof pen.

c. "Tyvek" waterproof labels (an archival quality, non-paper, printing material made of high-density polyester fibers impregnated with polyethylene) indicating the context number, site number and the initial classification of the object or objects were placed inside the polyethylene bag, along with the artifact.

This three-stepped labeling procedure insured that throughout all phases of artifact processing, research, and analysis, the object always retained its provenience information and identification.

Individual items were packaged, (depending on their condition), in 4 mil. thick ziplock polyethylene bags, acid free archival storage boxes, or inert plastic boxes or vials. All the finds recovered from one context number were placed in a larger archival box, but will be sorted and bagged by artifact class and/or by material within the artifact class. For example, historic ceramics recovered from one context number were placed in one 4 mil thick polyethylene bag (size permitting), with individual ceramic types or sub-classes such as creamware, pearlware, whiteware, redware, stoneware, porcelain, etc., in smaller 4 mil. thick polyethylene ziplock bags with their individual Tyvek labels within the larger historic ceramics artifact class bag. All major classes of artifacts recovered from one context number, such as bone, metal objects, and any other categories of finds such as building materials, were sorted, bagged, and tagged in the same manner described above. The storage boxes were organized in context number sequence and prepared for shipment to the long-term storage facilities.

3. Photodocumentation of Artifacts

All diagnostic artifacts have been photodocumented with sufficient detail to permit subsequent analysis and documentation. Each distinct artifact class, each chronologically or temporally diagnostic artifact was photographed as a basis for documenting the date of each of the excavated layers and historic features encountered.

E. Artifact Conservation

The laboratory facility was set up to be able to concurrently stabilize and conserve selected artifacts while the field investigation was still ongoing. The procedures were implemented to facilitate the identification, documentation, and conservation of the artifacts. Due to the inherent difficulties of conserving artifacts, conservation treatments were carried out on a 'piece by piece' basis. The decision to conserve an artifact depended upon its condition, singularity, an assessment of the facilities and type of treatment required for conservation, and estimates of the treatment duration.

The majority of artifacts recovered from the PSA 4 sites were identified, documented, and placed into temporary storage. A select range of datable and diagnostic objects specifically relating to the history of the site, or to the daily life of the nineteenth century inhabitants of the area, were further cleaned and stabilized for subsequent detailed analyses. Artifacts such as coins, tokens, and medallions were given priority due to the datable information often contained on their surfaces.

1. The Conservation Laboratory

The conservation laboratory is set up as a separate work space with a dedicated exhaust and ventilation system and wet and dry processing areas (ca. 9 by 12 feet). All conservation activities take place within the confines of the lab. The conservation laboratory is maintained to prevent contamination of the main workroom and office with fumes, particulates, debris, and noise generated within the laboratory.

The laboratory was further subdivided into small work stations which contain the equipment, tools, and supplies requisite to the performance of specific tasks or procedures. These stations were dedicated to preliminary artifact examination, initial documentation and post treatment recording, mechanical cleaning, chemical cleaning, electrolytic reduction, and appropriate chemically neutral artifact storage containers.

Laboratory safety procedures were implemented to ensure a safe working environment and minimize the risk of accidents. This was accomplished primarily by dividing the laboratory space into distinct, task-specific work stations and using appropriate protective clothing. The laboratory is equipped with a wall mounted eye wash station, first aid kit, and fire extinguisher. All solvents, acids, and bases are stored in vented explosion proof metal chemical storage cabinets. Dry chemicals are stored in designated storage areas within the laboratory. An exhaust hood is utilized for eliminating particulates and fumes generated during the artifact cleaning process.

2. Artifact Documentation and Recording

The primary tasks of artifact identification and computer based documentation were organized to keep pace with the rate at which the materials were excavated in the field. Artifacts excavated from the site during each work day were brought to the laboratory for either immediate or overnight processing. In the field, after being segregated by material into plastic bags, artifacts were temporarily packaged in large tyvek bags with drawstring closures to prevent the mixing of artifacts between contexts, and to minimize the opportunity for contamination. Each bag was tagged with the date, context number, provenance, and initials of the excavators. After being cleaned, identified, and logged into the artifact inventory, diagnostic artifacts were pulled for individualized conservation treatment.

3. Conservation Treatment Procedures

The majority of the artifacts recovered from the PSA 4 site were well preserved and in fairly stable condition. Numerous variables affect both the physical preservation of archaeological remains and how artifacts respond to the conservation treatment. In addition, the physical and chemical processes which cause and facilitate the deterioration of artifacts are often only temporarily arrested through conservation treatments, and in the majority of

cases, most artifacts require periodic monitoring and subsequent re-treatment over the course of their curated life span.

The conservation treatment procedures used for the PSA 4 artifact assemblage were designated on the basis of material composition. These categories included metals (silver, iron, tin, lead, pewter, copper, copper alloy, gold), ceramics, glass, bone and ivory, and artifacts of composite manufacture. The conservation treatments for all artifact categories were implemented according to the following procedural steps: preliminary evaluation, initial documentation, interim artifact storage, mechanical cleaning, conservation treatment, packing & temporary curation, and periodic post-treatment inspections.

Presented in the following sections are the simplified treatment procedures for metals and glass. Although mid-nineteenth ceramics constituted the largest class of material in the assemblage, they are extremely stable artifacts and required little attention from a conservation perspective. In addition, the bulk of the leather recovered from the site consisted of shoe heels in an extremely desiccated, friable and fragile condition. The stabilization and conservation of these objects was estimated to be labor intensive and time consuming with dubious results. As such, only certain specimens were selected for stabilization, with the majority left as excavated.

a. Conservation of Metal Artifacts

Iron

The specifics of iron corrosion are chemically and technically complex. For detailed explanations of the iron corrosion process and its effect on archaeological artifacts, see Hamilton (1975), Argo (1981), Gilberg and Seeley (1981), North (1982), and Pearson (1987).

Iron is the most difficult archaeological metal to conserve because the corrosion products are physically and chemically unstable. After an artifact is removed from its depositional environment the corrosion process often accelerates. Exposure to the air and atmospheric moisture causes the ferrous compounds of the artifact to rapidly oxidize to a ferric state which occupy a volume greater than the parent metal. These chemical changes induce scaling of the artifact's surface, and often result in the eventual loss or distortion of the object beyond recognition.

Several methods are commonly used to clean and stabilize corroded iron artifacts. These included electrolytic reduction, sodium sulfite reduction, and hydrogen annealing. In cases of extreme degradation, casting and molding of the object is often the only feasible treatment option. In general, the iron artifacts recovered from the PSA 4 site were in sound physical condition and retained a solid metallic core. As a consequence, electrolytic reduction was chosen as the primary treatment method for the majority of artifacts.

Electrolytic reduction units are easy to install and maintain, and they are inexpensive to operate. An electrolytic cell is set up by connecting an artifact to the negative terminal of a regulated DC power supply and placing it in a vat containing an electrolyte (5% sodium hydroxide) as a medium of conducting the electric charge. The artifact serves as the cathode of the electrolytic cell which is surrounded with an anode, often consisting of expanded steel mesh, that is connected to the positive terminal of the power supply.

During electrolytic reduction two electro-chemical processes take place. First, some positively charged metallic iron ions are reduced back to a metallic state. At the same time, negatively charged anions (e.g. chlorides) migrate from the matrix of the artifact toward the positively charged anode by electrolytic attraction. Second, hydrogen gas is evolved from the surface of the parent metal due to the generation of a weak hydrolysis reaction. The physical, effervescent, action of the hydrogen bubbles add to the mechanical cleaning the artifact by loosening debris and corrosion products from the object's original surface.

The generalized treatment procedure for the conservation of ferrous artifacts follows:

1.Mechanical cleaning

2.Electrolytic reduction

3.Boiling and cold de-ionized water rinses

4.Dehydration series (ethanol, acetone)

5.Surface sealing with tannic/phosphoric acid

6.Final sealing microcrystalline wax

The treatment duration for ferrous artifacts is dependant on a variety of factors including the artifact size, surface area, volume and chemical nature of corrosion products, amount of metallic metal retained within the artifact, the applied current density, and the type of electrolytic reduction unit and hardware.

Cupreous Metals

Cupreous metals can be cleaned electrolytically or chemically. The electrolytic reduction of cupreous metals follows the method described previously for iron artifacts. The term 'cupreous metals' applies to copper and alloys in which copper is the predominant metal (brass and bronze). Cupreous chloride, cupreous sulfide, and mineralized cupreous deposits are the most common copper corrosion products encountered in archaeological artifacts. Upon exposure to the atmosphere, cupreous artifacts continue to corrode by a cyclic process known as bronze disease. Effective treatment of cupreous artifacts requires that the

cupreous chlorides be removed, converted to non-reactive compounds, and that the object surface be sealed from the atmosphere to prevent the further action of bronze disease. The latter step is generally achieved by treating the artifact surface with benzotriazole which forms an insoluble, complex compound with the cupric ions. This treatment prevents any moisture from chemically reacting with the cupreous chlorides (Green, 1975; Hamilton, 1975; Merk, 1981; Sease, 1978; Walker, 1979). Cupreous sulphide can be removed using formic acid or citric acid with thiourea as an inhibitor.

The treatment duration is substantially shorter than for iron. Small artifacts, such as coins or jewelry, require only a few hours treatment. The total estimated treatment duration was artifact dependant and ranged from 2-5 days. The generalized treatment for cupreous artifacts followed six basic steps:

1.Mechanical cleaning

2.Electrolytic reduction

3.Formic acid and/or citric acid cleaning

4.Dehydration series (ethanol, acetone)

5.Surface sealing with benzotriazole

6.Final sealing with clear acrylic coating.

Silver

The silver artifacts recovered from the PSA 4 assemblage consisted of small finds, mainly servingware and jewelry. In general, the corrosion products of silver are stable and minimal cleaning is required. The majority of the artifacts required only the physical removal of accumulated dirt and tarnish deposits (silver sulphide). This was accomplished chemically (thiourea, ammonium thiosulfate) or with a mild abrasive paste consisting of sodium bicarbonate and deionized water.

Several objects required short duration electrolytic reduction treatments to loosen the tightly adhering corrosion products and/or dirt by means of the mechanical action of the evolved hydrogen gas bubbles. Electrolytic cleaning of silver additionally removes chloride (if present) and sulfide ions and reduces the silver in the corrosion compounds to a metallic state. The treatment duration for silver artifacts ranged from 1-4 days depending on the type of corrosion and the condition of the artifact. The generalized treatment for silver artifacts included the following procedures:

1. Mechanical cleaning

2. Chemical cleaning

3. Electrolytic reduction

4. Deionized water rinse

5. Dehydration series (ethanol, acetone)

6. Final sealing with clear acrylic

Lead, Pewter & Tin

Lead based artifacts can be cleaned electrolytically following the methods described above. However, due to availability of chemicals and the easily applied treatment, the lead artifacts recovered from the PSA 4 site were uniformly cleaned using hydrochloric acid. This treatment chemically removes lead sulfides, lead carbonates, calcium carbonate, lead monoxide, and ferric oxide. The treatment duration for each of the lead artifacts ranged from 3-14 days depending on the state of the object. Most of the lead based artifacts were poorly preserved. The generalized treatment for lead artifacts included the following procedures:

1. Mechanical cleaning

2. Hydrochloric acid bath

3. Deionized water rinse

4. Dehydration series (ethanol, acetone)

5. Final sealing in molten microcrystalline wax.

b. Conservation of Bone and Ivory

The range of worked bone and ivory artifacts recovered predominantly from the cistern fill (Component IIIb) consisted entirely of small finds (e.g. utensil handles, knitting needle handles). Although microscopic examination was often required to distinguish between the two materials, the treatment procedures were identical. The conservation treatment consisted of mechanically and chemically removing the superficial debris and

stains from the objects followed by sealing the surface with a clear acrylic coating. Soluble mineral salts were removed by successive baths of deionized water followed by a series of successively stronger alcohol baths to dehydrate the cleaned specimens. Insoluble salts (calcium carbonate) were removed by immersion in dilute solutions of hydrochloric acid or formic acid.

c. Conservation of Glass

Numerous glass bottles were recovered from the site. Most required both mechanical cleaning and chemical stabilization due to their tendency to dry out and exfoliate or scale off at the surface. Following physical cleaning, the bottles were sealed with a clear acrylic to consolidate the surface and minimize the loss of the patinated surface. The technique used to clean and stabilize the glass bottles from the PSA 4 site consisted of the following steps.

1. Mechanical cleaning to remove dirt and debris.

2. Soak in deionized water to remove adhering dirt, if required.

3. Dehydration series in ethanol and acetone

4. Application of clear acrylic to all interior and exterior surfaces

5. Storage in sealed air-tight plastic bags.

V. The Archaeological Reconstruction of Site Chronology and Land Use History

A. Introduction

The surviving documentary record appears to be both spotty and inconsistent, in terms of when the early residents of the block actually had potable water from outside sources, regardless of the presence of street mains. To begin with, the installation of City water pipes into the streets may have, and in this case appears to have had, little to do with the date of actual hook ups to private residences in the area. Based on the archaeologically established date for the post 1867 abandonment and filling of the cistern, actual hookups of potable piped water appears to have not taken place for some twelve years after the water lines were installed in local streets in this area of the city.

In addition, while one group of records, those of the City Council, recorded the installation of sewer lines in adjacent streets as of 1844, the official records of the Bureau of

Sewers did not report the installation of sewer lines in 9th Street until 1891, some forty seven years later. Later scholars have proposed that sewer lines were available sometime between 1848 and 1865 based on surviving City Council records (Moehring 1981:48). However, because sewer lines and flush toilets both require piped potable water supplies, the archaeologically dated filling in of the stone Cistern after 1864, strongly suggests that the documents, in this case, are less than reliable and that sewers and water lines were not actually functioning in Lot 58 until after the end of the Civil War.

B. Colonial Background and Landfill History

Prior to being raised and "reclaimed" through the addition of artificial landfill during the first part of the 19th century, this section of the Lower East side was, and continued to be throughout the 17th and 18th centuries, an area of lowland tidal marsh and salt grass meadowlands which bordered the eastern shoreline of Manhattan (See Figure 1.1). Early Colonial and 19th century maps of New York clearly depict this section of the Lower East Side as being composed of salt grass tidelands which today are buried under some fifteen feet of historic and 20th century fill which was laid down to "reclaim" these marshes for new development, and then later was added to through the accumulation of multiple episodes of demolition and rebuilding until the modern surface grade was reached in the last half century.

Three historic maps consistently document that the project area was originally comprised of a tidal or estuary salt marsh which was both initially drained through ditching in the Colonial Period, and then served as a source of marketable salt grass and then during the 18th century as a marketplace. The 1776 Ratzer Plan depicted the area as a tidal marsh, labeled as "Salt Meadowlands" at the time. This view also shows, as does the later 1817 topographic rendition of Lower Manhattan by Poppleton, that by the 18th century these lowlands had been ditched and drained, lowering the surface water level and providing access to the meadowlands as a resource and eventually as a market area (See Figure 1.2 and Figure 1.3). Finally, this characterization of the project area was reiterated in a Civil War era map by Viele which also showed the topography of the area as a tidal wetlands or meadowlands, and provided a street and block specific grid which permitted the location of the archaeological site relative to the subsequent 19th century street grid after the lowlands were filled in between the 1820's and 1840's (See Figure 1.1).

This proposed reconstruction is supported by the dates of individual diagnostic artifacts, and by the relative proportions of dated artifacts recovered from the "Early Fill" by more general time periods. The presence of 16 pre-1800 (late 18th century) artifacts of all types from the lower Early fill suggests that at least some of the fill material included redeposited historic cultural deposits or trash from other portions of the City. However, despite their presence, the majority, 289, or 67%, of the excavated materials recovered from the "Early" lower fill dated to the twenty year period between 1820 and 1840. Following this period, a smaller number of only 21 artifacts were recovered from the fill from the decade of

1840 to 1850, and nearly a third of the Early Fill sample, 113 artifacts, or 26%, were not manufactured until the decade of 1850, with the two most recent sherds of pottery (from the upper levels of the Early Fill which underlay and surrounded the cistern) out the total of 439 artifacts, demonstrating an initial manufacture date of post-1851.

Thus when combined, this stratigraphic and chronological data suggests strongly that this portion of Lower Manhattan was not initially filled in until after the decade of the 1820's, that it took approximately 20 years to finish the first phase of landfilling, and that the process of gradual accumulation continued throughout the period of use of the cistern from the 1840's through the decades of the 1860's, when the cistern was finally abandoned as a water control system, partially filled-in in the late 19th century, and then capped with three feet of near surface demolition debris in the 20th century.

Samples taken from the fill below the buried historic surface the cistern was built into document that it continued to be fill after the second decade of the 19th century, a process that appears to have continued even after the construction of the cistern, up to and through the decade of the 1850's.

This underlying fill extended to a depth of ca. 15 feet below the modern surface, ca. eleven feet below the Civil War era surface, and was built up as a series of landfill deposits laid down over the colonial meadowlands depicted in 18th and 19th century map coverage for this section of New York City. The contrasts in the color and composition of the various underlying fill deposits, combined with the broad time span of dated artifacts recovered from these deeper deposits, suggests strongly that the earlier deep fill layers and artificial surfaces upon which, and into which, the large oval cistern was constructed was built up to within ca. three feet of the modern surface by the 1840's and remained in use from the 1840's through the end of the Civil War (at least 1867), based on the most recent artifacts found associated with that surface.

Based on the combined information from engineering borings and archaeological test probes, the stratigraphic record indicates that the earliest landfill over the meadowlands consisted of alternating deposits or lenses of ash, slag, and cultural refuse or midden deposits, often filled with large numbers of earlier Colonial and Revolutionary War era artifacts scraped up from other areas of the city and redeposited as part of the new landfill sometime after the 1820's. This early landfill episode appears to have lasted some twenty to thirty years in time, until ca. the 1840's, at which point the fill had raised the original surface level some 10 to 12 feet above the buried mud of the former shoreline meadows. By the decade of the 1840's to 1850's, or within a decade before the Civil War, this "new" historic surface reached to within three feet of the modern grade, and formed the physical matrix or base for the construction of the Civil War era water control systems discovered as part of this investigation.

The subsequent three feet of "modern" fill came from other sources than the earlier deposits used to fill the marshes. Instead of being intentionally dumped to fill in the water-logged tidal basin which ringed the shore, the subsequent additions of landfill derived from the inadvertent accumulation of rubble and construction materials which build up as bands of fill after each major episode of 20th century rebuilding in the neighborhood. The recent example of the building demolition of the 1960's structures on the block represents only the most recent episode of accumulating landfill, which added the final two feet of fill to the continuing sequence of landfilling within this historic shore line area.

C. The Mid 19th Century Cistern

The first evidence of the early pre-Civil War, ca. 8 foot diameter, oval cistern or drain system was initially manifested as a curved line of large cobbles within and below the floor level of the surrounding rough cut and dry laid stone building foundation exposed in the rear of Lot 58 (See Figure 2.9 and Figure 2.10).

The buried historic cistern found completely enclosed within the rough cut stone foundation wall was first identified at a depth of 4.5 ft. (three to four feet below modern grade) and extended down in depth to elevation -1 feet at the bottom of the historic cistern. It measured a total depth of 5.5 feet from the upper rim of dry laid stone to the base which was sealed and made water tight with two layers of an impermeable clay material at the base of the cistern. The water holding capabilities of the clay lined base and cobble walls was clearly demonstrated during the excavation when a day of heavy rain filled the cistern with ca. one foot of fresh water which did not drain out or diminish in depth for several days.

Once the ca. 2.5 to 3 ft thick surface cap of 20th century demolition debris (elevation 7.7) was removed with heavy machinery (a backhoe with a 34 inch flat blade welded to the bucket to facilitate thin horizontal scraping), the excavation team documented the presence of a clear and undisturbed 18 inch thick stratigraphic sequence of historic, mid to late 19th century, construction, occupation, and post destruction deposits and structural remains extending in depth between two and three and a half feet below modern grade (from 5.5 down to 4 ft above Manhattan datum) (See Figures 2.2 through 2.5). The initially discovered rectangular stone foundation wall (which encloses, but appears to post-date the cistern found within it), first appeared at the base of the modern demolition rubble, at two to three feet below grade, and extended in depth ca. 18-24 inches from the top to bottom courses. While most of the rectangular foundation wall appears to have been cut down after its abandonment to some two feet below modern grade (elevation 5.5), one surviving segment near the northeast corner of Lot 59 was undisturbed, and demonstrated an original height of some 2.5 feet from the top of the stone foundation wall to its base, which suggested that at least the upper portions of the stone foundation wall had been built to extend above the original historic surface grade (See Figure 2.8). The base of the historic post 1867 fill deposits within the building was archaeologically demarcated by the presence of buried planks, presumably from the time of demolition.

As the detailed stratigraphic investigation of the associated inlet and outlet drains documented, the excavation provided clear structural and stratigraphic evidence that the rectangular stone foundation post dated, or was built after, the cistern (despite the recovery of a early 1823 Dutch coin from the wall matrix). As discussed below, this interpretation was supported by the fact that the rectangular stone foundation wall cut into and partially destroyed the upper courses of brick within the brick and stone inlet drain (See Figure 2.6).

2.10 ?

D. The Initial Construction of the Cistern

With this basic temporal framework established for the underlying fill, the analysis of the subsequent strata and cistern related features focused on trying to establish through artifact associations and initial manufacture dates, the time period that the cistern was in fact initially constructed, and first put into use.

Two individually excavated natural stratigraphic deposits or Features (Feature 800.05 and Feature 806) were exposed which relate to the time of the initial construction of the cistern. Because they both related to the initial stages of cistern construction, both were grouped together into a larger unit of contemporary, designated as Component I. The first of these, Feature 800.05, represented a sample excavated from immediately below the clay base or bottom liner of the cistern which was laid down upon construction. The second, Feature 806, consisted of the fill from the builders trench which underlay and surrounded the smaller brick and stone inlet drain leading into the cistern, and which was structurally and temporally associated with it. Together these two small Features yielded a total of 75 artifacts, for which 16 could be assigned a discrete date of initial manufacture, or TPQ. Fifteen of these items consisted of ceramic sherds, and one heavily eroded 18th century coin minted in 1783 (See Figure 6.1).

In addition to the coin, the fifteen ceramic sherds from both features of Component I ranged in date of initial manufacture from post 1820 to post 1840. The most recent pottery recovered from the base clay bottom or seal of the cistern (Feature 800.05) dated to post 1820, a deceptively early date. However, from the builders trench associated with the inlet drain leading into the cistern (Feature 806), the most recent artifacts consisted of two sherds, which post dated 1830 and 1840 respectively. These two ceramic TPQ dates therefore fix the date of initial construction as being sometime after 1840. The lack of later ceramic types or other datable artifacts indicates that it was probably constructed prior to the decade of the 1850's.

E. The Cistern Complex: Use and Abandonment.

Although the small sample size of artifacts from these early features suggests that the initial construction of the cistern may have been later, the presence of post 1840 artifacts within the cistern inlet and outlet drains suggests strongly that it may have been in use as of the late 1840's, versus the decade of 1850. Although not temporally conclusive, the recovery of artifacts dating to the 1840's, and no later than 1851, from the interior of the two cistern

drains (Component IIIa) indicates strongly that it was in use at this time period. What is clear from the evidence is that the cistern was build at least a decade before the Civil War, and possibly as early as fifteen to twenty years before the onset of the war.

Although the process of archaeological reconstruction was complicated by the addition of later elements and by intrusions from subsequent construction activities, which had to first be identified and then factored out as part of the chronological reconstruction, the core of the cistern complex consisted of four primary elements: the oval 5 to 8 foot wide, and five feet deep cobble cistern itself, the presence of two similarly constructed brick and cut stone drains leading into and out of the cobble catch basin of the cistern, and finally a the presence of a rectangular brick and stone overflow basin or stem built into the southern edge of the cistern as a spillway which led into the associated rectangular brick and cut stone outlet drain.

All four elements, functioned as a integrated water control complex and as such were built at the same time. They were also built using the similar materials and techniques, with mortared brick sides, and dry laid cut stone tops and bottoms.

Based on the fact of the structural and engineering integration of these four elements of the cistern complex, it is therefore possible to treat them as chronological whole or temporal entity which functioned together beginning at the same time and ending together when the cistern was filled and abandoned as a water collection and supply system.

F. The Associated Drain Structures

The buried cistern was found associated with two contemporary and functionally interrelated drains, both constructed with sides of mortared brick and finely cut, dry laid, unmortared stone slabs as the base and cover for both drains (See Figure 2.9 and Figure 2.10). The smaller of the two drains, identified as the "inlet" drain had an interior width of 4 inches, an internal height 8 inches, and was constructed with three courses of mortared brick each side, with unmortared, and finely cut and dry laid slabs of slate sealing the base and top. This small inlet drain (Feature 801) was finished at its northern end with a ca. two foot long rectangular carved stone channel, or spout, which extended over the rim and into the stone cistern basin.

The respective identifications, of inlet versus the outlet drain, was established based on the measurements of slope made by the high resolution computer transit, or EDM system. When measured to a resolution of 0.01 ft., the north-south elevation measurements of the "inlet" drain indicated a slope of approximately 0.35 ft per 10 feet, or ca. 3.5 % from south to north with a downward slope towards the cistern. This indicates that the inlet drain would have reached the historic surface approximately 30 feet to the south of the cistern, presumable near the rear wall of the former structure there.

Like the smaller inlet drain, the larger "outlet" drain was built with sides of mortared brick and a top and bottom of unmortared, finely cut, tightly dry laid and joined rectangular slate slabs. It was constructed of three courses of brick, measured 0.65 feet in height, but with a width of 0.8 ft, twice that of the inlet drain. Based on a series of north-south computer transit elevation readings along the interior of the drain, the larger drain sloped to the south (the reverse of the inlet drain), downward and away from the cistern. It ran towards the rear of the former 19th century buildings facing Eighth St. with an average gradient of 10%, or 1.0 ft. per 10 feet.

The fill of the builder's trench (Feature 806) for the smaller inlet drain contained historic artifacts including datable pottery sherds and a single, heavily worn coin. When electrolytically cleaned and photographed with axial lighting to enhance relief of the heavily eroded surface of the coin, it proved to be a "Washington and Independence" one cent piece which could be stylistically dated to 1783. Although suggestive, this early, Revolutionary War era coin appears to considerably predate the actual date of construction of both the small drain and cistern complex with which it was associated. Three associated decorated and datable ceramic sherds recovered from the builder's trench fill suggest a considerable later date. The ceramic sherds ranged in initial manufacture date from post 1820 to post 1840, and therefore provide the latest and most accurate time frame for fixing the initial construction date of the drain and cistern complex.

Specifically, the builder's trench of the small drain contained several small fragments of Transfer printed ceramics decorated with both blue and black designs. As detailed in Section VI, the age of these ceramic production techniques is fairly well controlled in the history of American and imported ceramics. Transfer printed ceramics first made their appearance over a 20 year period between the decades of the 1830's and 1840's, depending on the color of pigments used. The first variety of Transfer printed sherds were exclusively blue and were initially introduced or manufactured in the 1830's. Ceramics decorated with the distinctive black transfer designs are more recent, and were not introduced until the decade of the 1840's. The most recent sherd recovered from the fill of the small drain builder's trench was a Black transfer printed earthenware, which was not initially manufactured and could not have been discarded into the fill of the builder's trench until sometime after 1840. This ceramic TPQ (or initial manufacture) date therefore suggests that the initial construction date for both the structurally interconnected drain and cistern post dates 1840.

While the small quantity of diagnostic artifacts from the contents of the larger outlet drain proved to be of limited chronological value, it was found connected to a large rectangular brick and cut stone "box" structure (Feature 803.01) which had been built into the south side of the cobble stone cistern wall and as such was contemporary with the cobble cistern's date of construction. This brick and cut slate overflow box contained both a wide assortment of diagnostic artifacts and one datable coin, a "Liberty Head with Braided Hair" U.S. one cent, stamped with a mint date of 1849 (See Figure 6.4). Although part of the fill,

this dated coin does not reflect the date of construction of the cistern, or that of the brick "overflow" box found associated with it. Instead the pre Civil War date of this coin together with the presence of post 1850 ceramic artifacts suggest that the cistern complex was very likely in use during the 1840's and 50's. Together, the artifacts suggest that the water complex was built sometime after 1840 and that artifacts from the decade of the 1850's accumulated both within and outside of the cistern while it was being used.

This chronological scenario is corroborated archaeologically by the age range of the most recent artifacts recovered from within the two drains, and which could only have been deposited while the system was functioning. A total of fifty four diagnostic ceramic sherds (6 ironstone and 48 whiteware sherds) were identified as varieties which were not introduced until post 1850. In addition, a vulcanized rubber button with the BF Goodrich patent and date of 1851, suggested that the drains were in operation after this date.

G. Archaeological Evidence for the Abandonment of the Cistern Complex

The date for the abandonment and filling of the cistern was more easy to fix based on the large number of temporally diagnostic and chronologically consistent artifacts recovered from the fill of the dry laid stone cistern. The total sample of excavated artifacts from the interior fill of the cistern amounted to 10,348 artifacts, of which 1,860 or ca 18%, could be firmly identified as to their dates of initial manufacture.

The sample of datable artifacts from the cistern fill (Component IIIb) ranged in initial manufacture date from post 1762 to post 1867. No diagnostic artifacts post dated 1867,and more than 50% of the datable artifacts were initially manufactured only after 1850. In addition to predominance of post 1850 sherds, the cistern fill contained examples from almost every year for the decades of the 1820's through to 1860's, or the end of the Civil War. The most recent artifacts recovered consisted of 37 ceramic sherds of a whiteware variety which was not introduced until after 1867 (See Table 4).

In addition to the total of 10,348 artifacts, including 6,296 sherds of pottery, the excavation of the cistern fill resulted in the recovery of 21 historic coins and tokens. Once electrolytically cleaned, the sample of fifteen coins could be dated, and all had mid-19th century mint dates. The most recent, or latest identifiable coins recovered from the fill, dated to no later than 1864. Nine dated to between 1860 and 1863 (five to 1863 an three to 1864), and the earliest coin, a "Liberty with Braided Hair", dated to 1847. One poorly preserved coin dated to the decade of 1850 (probably 1850-57). Of four tokens recovered, one represented a "Capped Liberty Head" with the inscription "Liberty and No Slavery", with a date of 1863 (See Figure 6.5). The second datable token, a "Capped Liberty Head", dated to 1863, with the inscription "Army-Navy" on the opposite side (See Figure 6.6).

These unambiguous coin dates were augmented and paralleled in age by a much larger range of excavated diagnostic and datable ceramics, as well as several cases of Patented items including vulcanized rubber buttons and combs to establish the date of abandonment

of the cistern. One chamber pot reconstructed out of 37 sherds had a Registry mark of dating to 1867 and a second partial ceramic vessel has a TPQ of post 1862. These two ceramic examples were matched by the presence of a datable glass bottle which was not manufactured until 1861. Although not as relevant to the actual fill date of the cistern, the balance of the diagnostic artifact sample exhibited a date range from the mid 18th century though to the end of the Civil War (1867).

Based on this large assortment of chronologically consistent ceramic TPQ dates, datable coins, tokens, and patented buttons from the builder's trench, conduit, and cistern fill components (Components I,II,and IIIb) of the cistern complex, the case can be made that the cistern does indeed predate the Civil War by at least a decade, and that it was in active use from at least the late 1840's. Based on the identifiable coin dates made available through electrolytic cleaning, the cistern appears to have been constructed considerably earlier, some 30 to 40 years before the time frame for the initial presence of any buildings had been projected for the rear of Lot 58 based on the surviving evidence from the available documentary records as recorded in the initial Stage 1A sensitivity study (Bromley - 1879, in Rubinson 1993). The recovery of coins from the cistern fill ranged in date up to 1865, indicates that it stayed in use this time, and that it was filled in sometime after 1867, or several years after the end of the Civil War.

Despite the presence of earlier artifacts from the 1820's and 30's, the chronological evidence from below the clay base of the cistern, and from the builders trench for the small inlet drain, combine to suggest that the cistern was initially constructed in the 1840,s and used until at least 1867, the TPQ date of the most recent artifacts recovered from within it. Together this stratigraphic association of dated unmixed deposits and artifacts combines to strongly argue that the pre-Civil War era cistern system was in active use not only for at least a decade, if not two, before the war, but also that it continued in active use at least until shortly after 1867. In the final analysis, it has been possible to establish that the cistern complex was built prior to the decade of the 1850's and that it was abandoned commensurate with the end of the Civil War, on or soon after 1867.

H. Contemporary Pre-Civil War Era Features:

In addition to the well preserved stone and brick cistern complex in Lot 58, the excavation documented the presence of a heavily altered series of independent deep oval pits cutting down from the same mid 19th century surface level as the cistern complex, but located 12 feet to the west of it in the rear of Lot 59.

Designated as Component II, this early 19th century pit feature consisted of a major ca. three foot deep pit, which probably functioned as a privy. This feature was excavated in two distinct fill levels, designated as Features 902.01.-.02 for the upper portion of the pit, and as 903 for the lower fill of the pit. Leading into the pit, or possibly through it (a collapsed brick wall complicated the exposure and reconstruction of the stratigraphic relationships),

was a cut stone and brick inlet drain (Feature 906). This brick and slate inlet drain was similar in design and construction, and probably contemporary with the small pre-Civil War inlet drain (Feature 801) which led into the large stone cistern in Lot 58.

Although the dated artifacts (198) from these pit features contained a range of diagnostic pottery, glass, and coins from the late 18th century through to the middle of the 19th century, no artifacts post-dating 1850 were recovered. The total of 198 datable artifacts clustered in three time periods, 68 with TPQ, or initial manufacturing dates of post 1820, 54 of post 1830, and finally 44 with a TPQ date of post 1850. Together these three temporal clusters of dated artifacts suggest strongly that the 19th century pit features could have been built as early as the 1830's, and then filled in ca. a decade before the onset of the Civil War. No artifacts from the decade of 1860, or later were recovered. As such it appears reasonable that these Lot 59 pit features and drain represented an early phase of water or waste control at the site, and that the larger stone cistern from Lot 58, regardless of it relative age of construction, continued to be in use for some fifteen to twenty years after the Component II pit and drain features of Lot 59 were abandoned.

I. Post Abandonment Readaptation:

Based on the relative contemporaneity of the various structural elements of the drain and cistern complex it is possible to use the multiple lines of stratigraphic evidence and dated artifacts associations recovered from each of the cistern related components to address two main issues: when and for how long was the cistern in use, and two, when was it abandoned and filled in.

The issue of when the final abandonment occurred is important because it relates to the availability of potable water in the form of functioning pipeline hookups to the municipal water supply in the street, an event which appears to have taken place much later than the previously published documentary accounts have suggested. Based on the dates of the most recent artifact that were recovered as part of the fill of the cistern, it now appears that the cistern functioned in lieu of piped water on this block until at least the late 1860's, versus the 1850's as had previously been assumed.

While the dated and naturally stratified archaeological record clearly shows that the cistern was "decommissioned" and filled in beginning in, or soon after, 1867, the evidence also strongly suggests that it may have in fact been filled-in in stages, and readapted in the process to function as a sump or community drain after the installation of street connections to the piped municipal water supply. Two lines of evidence support this interpretation; one the presence addition of a later terracotta pipe which drained into but was not structurally connected to the rim of the cobble cistern, and two, the stratigraphic evidence that the dry laid stone wall enclosing the stone cistern was built after the terracotta drain pipe was laid down, and after the cistern ceased to function as a collection system for potable water.

In addition to the brick and cut stone inlet and outlet drains found associated and contemporary with the Cistern construction and use, the excavation also exposed the presence of a third drain system of glazed ceramic pipe that appears to have post-dated its use as a cistern or water storage system. A ca. 13 foot long section of ceramic drain pipes was exposed in a north - south alignment with it's outlet laid without direct connection some two feet to the east of the outer stone wall of the cistern. The "outlet" end of the ceramic pipe drain was bounded by a curved line of unmortared bricks which led toward, but were not connected to, or structurally integrated with, the cistern itself. Although the technology of making glazed and fitted terra cotta pipes appeared in England as of 1845 (Gwilt 1867), their use in this New York site appears to considerably post date this time frame, and, in fact, based on the stratigraphic record recorded during the excavation, appears to have post-dated the post 1867 date for the filling of the cistern and its abandonment as a water storage system.

The stratigraphic relationship of the later terracotta pipe drain to the cistern and the stone building wall both suggest that it was built after the cistern was partially filled and abandoned, and after the stone wall surrounding it was constructed. Despite the fact that the matrix of the stone building foundation wall which surrounded the cistern contained an early 1823 Dutch coin, the stratigraphic evidence indicates that the building appears to have post dated the construction of the cistern.

The later terracotta drain pipe leading towards, but not into, the cistern was laid beneath the footing of the stone foundation, and therefore appears to have been laid either before or during the construction of the enclosing dry laid stone foundation structure. In addition the careful stratigraphic excavation of a cross section of the building foundation wall documented that the wall cut into and partially destroyed and rendered non-functional, the original brick and cut stone inlet drain leading into the cistern (See Figure 2.20 and Figure 2.21). The contrast in workmanship and technology between the ceramic pipe, and the two brick and cut stone cistern drains, the lack of physical association and structural integration, and the stratigraphic evidence, together, suggest that the ceramic pipe drain and dry laid building foundation which enclosed the cistern post dated the abandonment of the cistern as a water control system.

The limited number of datable artifacts recovered in association with these events makes it difficult to tie down the timing of this projected readaptation of the drain as an apparent sump. The artifacts from the fill of the builders trench into which the terracotta pipe was laid contained a mixture of diagnostic items dating from the 1820's and 1840's but also eight sherds of whiteware which were not introduced as a type until 1850, indicating that the pipe at least post dated this time period. However, since the pipe appears to have been laid after the cistern was initially filled, its actual date of construction must have been after 1867. The artifacts recovered from within the matrix of the dry laid stone foundation wall were also deceptively early. Only the fact that the wall cut through the small inlet drain which was

abandoned along with the cistern after 1867 provides and accurate line of stratigraphic evidence for placing the date of construction for both the wall and the later terracotta drain pipe (Feature 804).

J. Late 19th and Early 20th Century Features

Following the construction of the rectangular stone foundation wall there is a gap in the stratigraphic/artifactual data until the subsequent intrusion from later features which were built or cut into the underlying Civil War era deposits once they were filled in. Two unrelated drain and privy features, one from the late 19th or early 20th century, the other from the first half of the 19th century were excavated and recorded in the rear of Lot 59. Both 20th century features were grouped together as Component V. The larger and more recent of the two features, a rectangular brick and cement privy or water closet with an iron and lead inlet drain (Feature 901), matched the mapped location and construction of a post-1901 community water closet recorded on the surviving 20th century lot plans. This large rectangular feature also contained only late 19th and early 20th century (post 1930) artifacts which included molded "safety" or "refrigerator" glass and modern mason jars, suggesting that it was abandoned and filled after the first quarter of the 20th century.

The second of the two Late 19th/Early 20th century intrusive features consisted of a small ca two foot wide oval pit in the rear of Lot 58 (Feature 802), was discovered cutting into the later 20th century surface made up of post 1867 fill starting some six inches above the rim of the cistern. While the majority of the artifacts recovered from this intrusive trash pit dated to the early and mid 19th century, the presence of marked whiteware sherd which was only introduced after the turn of the century, and then only manufactured between 1900 and 1948, documents that the pit could not have predated 1900. This evidence of artifact associations therefore indicates that the subsequent fill and living surface which accumulated over the cistern after it was abandoned was clearly in place by 1900, if not earlier. How much earlier could not be determined.

VI. Historic Artifact Analysis

A. Ceramic Analysis

1. Objectives

a. The Ceramic Sample

All excavated ceramic artifacts were processed and assigned to natural stratigraphic units of association and contemporaneity. A total of 6,396 ceramic sherds were recovered from the PSA 4 excavations from the feature and fill deposits of Lots 58 and 59, as parts of 9 identified site components. Of this total, 3,260 or 51% were recovered from the 7 predominantly mid 19th century discrete and unmixed and ultimately datable historic deposits, features, or structural elements. The remaining 2 components were comprised of

and designated as "early" and "late" fill deposits, and yielded a total of 3,136 ceramic sherds, or 49 % of the PSA 4 ceramic assemblage.

b. Chronology

The primary objective of the diagnostic ceramic analysis was to establish a chronological framework for the individual feature deposits and stratigraphic contexts excavated from Lots 58 and 59. Analysis proceeded by the identification of component groups, according to initial excavation units or contexts, and then by discrete chronologically and stratigraphically contemporary features, deposits, or larger groups of excavation contexts. For all strata groups, the age of each excavated feature deposit, or fill context was determined by the date of the most recent artifact found within it, either ceramic, glass, or coin. For ceramic artifacts, this time marker is represented by the initial date of manufacture for each ceramic type and is referred to as the ceramic "Terminus Post Quem" (TPQ) or "date after which". As observed by James Deetz,

> "The principle of dating deposits on the basis of the newest artifact found in them is...known as the terminus post quem (date after which),...is powerful when combined with a detailed knowledge of the history and development of the artifacts in question." (Deetz 1977:16).

Therefore, the date range of any particular context, or initially excavated stratum is established by the TPQ date of the latest ceramic type identified within it. The date range for any one component group (group of features or contexts) in turn, is referred to as the Component Group TPQ, and establishes the date after which the entire deposit, or group of stratigraphically linked contexts within it, was laid down. Although numerous datable ceramics from a broad time span may be present in one context or component group, the date of deposition is marked by the date of the most recent or newest ceramic and/or other artifact identified. This principle of dating each context and component was applied consistently, regardless of the presence of earlier datable ceramic ware types.

c. Origins and Changes Through Time

Although secondary to the primary goal of dating, an additional objective of the ceramic analysis was to determine the country of origin and, where applicable and possible, the specific region of manufacture for the historic ceramics. A third objective of the diagnostic ceramic analysis was to establish the range of variation present in the PSA 4 assemblage and the range of variation in similarities or differences both within and between the specific components.

2. Methods

a. The Ceramic Typology

The first step of the ceramic analysis consisted of the identification and tabulation of the sherds by the specific ware types by individual excavation context. All artifacts, including ceramics were counted, identified as to material and functional class, and where possible,

dated. This information, together with all provenience information was first entered onto paper data forms, and then entered into a computer data base system. All diagnostic ceramics recovered during the PSA 4 excavations were tabulated and computer inventoried. Unidentifiable sherds and burned or otherwise altered so as to be unrecognizable sherds were counted but not dated, and are included as part of the total sample.

The ceramic identifications were in part based on the definitions of Ivor Noel Hume (1969, 1976) and Stanley South (1972, 1978). Ceramic ware types #1 to #78 as defined by South (1978) correspond to the ceramic ware definitions/TPQ and date ranges consistently used during the PSA 4 site analysis, with minor changes or unless otherwise referenced. Additional ceramic type definitions and dates taken from other sources were also integrated, which primarily reflected stylistic and manufacture technique changes or refinements of the broader ceramic ware type designations.

Fifteen categories of ceramic ware types were identified from the PSA 4 ceramic assemblage. Within these broad ceramic categories were specific ware types descriptive of either paste and glaze or paste and decoration. These broad categories have a wide date range, while the additional types usually have a discrete TPQ date, and narrower identified date range of manufacture.

The following section briefly describes only those ceramic ware types of the larger typology which were identified in the PSA 4 assemblage. The TPQ, or initial manufacture dates, for each of the described ceramic ware types (#1 to #78) were adapted from South and Noel Hume. In addition, when a maker's mark, Registry mark or any other temporally specific diagnostic mark was present, it superseded the more general given TPQ/date range for a particular ceramic ware. The total ceramic sample of 6,396 ceramic sherds, represented a broad range of late 18th and 19th century varieties. A total of fifteen major ware types, or groups were identified.

- 1) **Brown Stoneware:** Individual types include brown stoneware bottles (1820-1900+), Bristol brown bottle (TPQ 1850, Munsey 1970), and other brown stoneware.
- 2) **Creamware:** This type is a refined cream bodied earthenware. Individual ware types were identified and dated on the basis of manufacture technique and/or decorative style. Two variations were present in the PSA 4 assemblage and consisted of overglaze enamel painted (1765 to 1810) and plain undecorated (1762 to 1820).
- 3) **Tin Enameled Earthenware (delftware):** Few sherds of this type were recovered from the PSA 4 site, and all are dated post 1750. The earthenware body is soft and porous, and usually a buff to yellow color. The glaze is thick and opaque, and usually white due to the addition of tin oxide to the lead glaze before firing.

- 4) **Pearlware:** This diagnostic ceramic type is classified as a refined white earthenware. It has a broad date range of 1780 to 1830, and individual chronologically distinct types of pearlware were also identified based on the manufacturing process as well as decorative style. Eight chronologically identifiable types of pearlware were identified in the PSA 4 assemblage: a) Embossed (TPQ 1800), b) Transfer printed (1795-1820), c) Willow pattern transfer printed (TPQ 1800), d) Underglaze polychrome painted (1795-1815), e) Annular decorated (1790-1820), f) Underglaze blue painted (1780 to 1820), g) Blue or green shell edge decorated (TPQ 1790, TPQ 1810:Sussman 1977), and h) Undecorated (1780-1820).
- 5) **Blue/Gray Stonewares:** The individual types of blue/gray stoneware were identified based on paste and glaze and, for the most part, remain undated. The identified types represented included gray salt glazed, drab body salt glazed, cobalt blue decorated gray salt glazed, and gray salt glazed brown slip interior stoneware.
- 6) **Buff Stoneware:** This type is distinguished as stoneware with a buff colored paste. Individual types within this group were based on variations in exterior glaze and interior slip. Glazes range from clear to dark brown, either salt glazed or non-salt glazed, and for the most part, remain undated.
- 7) **Other Refined Stonewares:** Within this group, individual types were distinguished based on either paste and glaze, or decorative style and manufacture process. Included are white salt glazed (1740-1765), and an undated blue bodied, blue non-salt glazed stoneware.
- 8) **Porcelain:** Individual types of porcelain are distinguished based on paste, decorative style and/or manufacture process. Identified types recovered included: a) Canton/Nanking underglaze blue motifs (1800-1830+), b) Plain undecorated soft paste, c) Underglaze blue painted, d) Plain undecorated hard paste, e) Overglaze enamel decorated, and g) Gilt decorated.
- 9) **Redware:** Dated examples of glazed red bodied earthenware from the PSA 4 assemblage included Jackfield ware (1740-1780) and Luster decorated (1790-1840). Other undated redware types included: a) Clear lead glazed, b) B.black/dark brown glazed, c) Brown lead glazed, d) Bright red paste/black glazed, e) Ginger glazed, f) Speckled/mottled lead glazed, and g) Ginger green glazed.
- 10) **Red Earthenware:** This undated type represents unglazed red bodied earthenware. The paste is porous and ranges from fine to coarse, while the texture ranges from smooth to sandy. Flower pots and various utilitarian storage vessels were common vessel forms noted in the PSA 4 assemblage.
- 11) **Red Bodied, Slip-Decorated Ware:** These types are decoration specific, and remain undated. Types present in the PSA 4 collection included white trailed slip/copper splashed, white trailed slip, and other red slipware such as pie crust edge rim decorated.

- 12) **Buff Bodied Earthenware:** The paste of this ware type is fine and porous and the lead glazes range from brown to clear. No dates were assignable.
- 13) **Whitewares:** Dates for refined whitewares were based on decorative style and/or manufacture technique. When identified, a range of manufacture dates for a specific maker, as well as any Registry marks supersede the TPQ dates for each ceramic type.

Individual types included: a) Plain undecorated whiteware (1820-1900+), b) Blue transfer printed (1830-1900+), c) Red, Purple, Black, Brown, Green, Gray, Sepia, and Mulberry transfer printed (TPQ 1840:Coysh and Henrywood 1982, Price 1979), d) Flow-blue and Flow-black transfer printed (TPQ 1844:Gaston 1993, Coysh and Henrywood 1982), e) Annular decorated (TPQ 1830), f) Blue or Green shell edge decorated (TPQ 1830, TPQ 1850:Price 1979, Lofstrom et al 1976), g) Mocha decorated (TPQ 1830), h) Jasperware (1785-1825: Godden 1975), i) Pink luster decorated (TPQ 1830: John 1951), j) other Decorated whiteware (1830-1900+), k) Embossed (TPQ 1850: Price 1979, Lofstrum et al 1976), l) Thick undecorated (TPQ 1850: ibid), and m) Faded blue transfer printed (TPQ 1850: ibid). In addition to these, numerous maker's marks, Registry marks, and other diagnostic printed marks were identified from the PSA 4 assemblage.

- 14) **Ironstone:** Dates for the individual hard bodied ironstone types are based on variations of either decorative style, manufacture technique, or the presence of maker's marks, pattern names and/or Registry marks. As a group, the examples of ironstone recovered included plain, undecorated thick bodied, embossed, and blue transfer printed, all with initial TPQ dates of 1850 (Wetherbee 1980, Price 1979). However, the numerous registered patterns identified, as well as maker's marks and Registry marks on the PSA 4 ironstone assemblage provided a broad series of more temporally specific and more reliable ceramic TPQ dates and date ranges of production.
- 15) **Yellowware:** Datable examples of individual types included: a) Undecorated yellowware (TPQ 1827:McAllister and Michel 1993, Spargo 1974), b) Banded decoration yellowware (TPQ 1827:Spargo 1974, TPQ 1850:McAllister and Michel 1993), c) American Rockingham (TPQ 1812:Spargo 1974, TPQ 1839:Gates and Ormerod 1982). Undated types included other Yellow/buff bodied, and Buff bodied/brown glazed sherds.

b. Origins

Although it is difficult to determine the country of origin of unmarked vessels, it has been generally assumed that most of the refined earthenwares produced during the second half of the 18th century through the first quarter of the 19th century are of English origin. George Miller writes when discussing economic scaling and classification of 19th century ceramics, "In the second half of the 18th century, a revolution took place in the English ceramic industry...and astute marketing of creamware which culminated in English domination of world ceramic tableware trade by the 1790's." (Miller 1980:1). Within two decades of the introduction or perfection of creamware in 1762, pearlware was a distinct ware by 1780

(South 1978, Noel Hume 1976, Miller 1980). Creamware and pearlware were both initially produced during the 18th century, but remained popular ceramic wares as late as 1820 (Noel Hume 1976, South 1978).

For the purpose of this analysis, it has been assumed that all creamware and pearlware sherds are of English origin. One such example, a blue transfer printed pearlware base sherd was recovered from the interior fill of the stone cistern within Lot 58 (Component IIIb, Feature 800.04). The pattern name identified on this sherd is that of "Franklin's Tomb", which was one pattern in the Historical Staffordshire series of American Scenes manufactured for export, and which remained popular during the first half of the 19th century (Arman and Arman 1974). This dark blue transfer print is attributable to Enoch Wood & Sons of Fountain Place, Burslem, Staffordshire, England fl. 1818 to 1846. This firm was one of the most prolific producers of blue printed earthenwares, particularly for export. "A single shipment to America is recorded in a document sent to a Philadelphia dealer in 1834 as having 262,000 pieces." (Coysh and Henrywood 1983:408).

Often more difficult to attribute to country of origin are the later, refined white earthenware types, ie. White ironstone, Decorated whiteware, Hotel-type ironstone china, as well as Yellowware. While evolving out of the same British industries as creamwares and pearlwares, these subsequent 19th century ceramic types were also being produced in the emerging ceramic industry in the United States. Large ceramic production centers were established and flourishing by the mid 19th century in New England, New Jersey, Ohio, Vermont and Pennsylvania for example. It is for this reason that, in contrast to the earlier creamware and pearlware varieties, it could not be assumed that all whitewares, ironstone china and yellowwares were of English origin.

The first yellowwares brought into the U.S. were imported from England at the turn of 19th century. During the first quarter of the 19th century, however, domestic yellowware production was initiated with a rapid increase in quantity and quality (McAllister and Michel 1993). Several factors are responsible for this domestic growth in production, both for yellowwares, and the entire ceramic industry. These commercial forces included the availability of large quantities of good quality clays, an extensive transportation network of waterways, roads, and ultimately the railroads, large consumer population centers and the migration of experienced British potters to America made the East Coast an ideal location (Ibid). Numerous yellowware potteries, both large and small-scale, were in production by 1830 throughout New Jersey, New York, Vermont and Pennsylvania.

B. Specific Ceramic Chronological Indicators

Makers' marks, Registry marks, trade marks and other printed or impressed information on the sherds such as registered pattern names provided reliable, documented origins as well as dates of manufacture for numerous whiteware, ironstone, and yellowware artifacts.

1. British Makers' Marks

Makers' marks on ceramics both identify the manufacturer and assist in the dating of a particular sherd. This technique of identification becomes of greater importance when a known maker was in operation for a long period of time. Geoffrey Godden (1964) discusses certain general rules to aid the ceramic analyst in the dating of mid to late 19th century British ceramics. For example, "ENGLAND" was added to all British trademarks after 1891 to comply with the United States McKinley Tariff Act, while the words "MADE IN ENGLAND" signify a later 20th century date. The words "TRADE MARK" on British ceramics came about as a result of the British Trade Mark Act of 1862, but did not become common until after 1875 (Godden 1964:11-12). In addition, many of the 19th century marks incorporate the Royal Arms, the Staffordshire knot, or a garter-shaped mark, sometimes crowned. The presence of Royal Arms, often with lions and unicorns usually include the motto of the Royal Order of the Garter "HONI SOIT QUI MAL Y PENSE" with "DIEU ET MON DROIT" below (See Figure 4.19b and Figure 4.21).

2. British Registry Marks

In addition to individual makers' marks, mid 19th century ceramics were also impressed (stamped) or printed with a diamond shaped Registry Mark, often found on the base of refined earthenware vessels dating after 1842. Until 1842, when the Copyright Act was passed in Britain, there was no law to prevent potters from using illustrations in books as the basis for their transfer print designs. In fact, the majority of early blue transfer printed scenes were based on published engravings, including prints from widely available topographical books, which were in vogue during the first half of the 19th century (Coysh and Henrywood 1982). "When the 1842 Copyright Act was passed it became illegal to pirate any material from such a book for forty-two years after first publication." (Ibid:93). As a consequence, the registration mark on the base of a ceramic vessel indicates the date on which the design was registered with the patent office in London, not the date of manufacture of the vessel. As Coysh and Henrywood noted, "Such marks were often used over a long period, sometimes beyond the time for which protection was provided for by the Act." (Ibid:299).

The 1842 Copyright Act was not limited to illustrations or engravings found in books. It also provided for the registration of embossed designs and/or shapes with the London Patent Office. This protection enabled potters, especially of embossed ironstones and whitewares, to register their particular embossed designs or molded vessel shapes with the patent office, which gave them protection from piracy by competing potters for a period of 3 years (Ibid; Wetherbee 1980). This protection could be continued by re-registration. "The procedure gained wide acceptance and was used by retailers and designers in addition to the manufacturers." (Coysh and Henrywood 1982:297). The same basic series of coded, diamond shaped registration marks, either impressed or printed, were used from 1842 to

1883, with two variants in the method of coding the dates. One series was used from 1842 to 1867, and the second series was used from 1868 to 1883.

It is important to note that, as in the case with printed designs, the embossed pattern and/or molded vessel shape registration marks reflected only that "the date recorded the time of the introduction of the design and was not necessarily that of the date the item was potted" (Wetherbee 1980:21). However, the presence of a legible Registry mark or the recognition of a known registered embossed pattern or shape does provide a solid TPQ date (date after which) for when the ceramic vessel, decorative type or vessel form was introduced.

3. American Maker's Marks

White ironstone, sometimes referred to as "white graniteware" was manufactured by American potteries from 1860 to 1900. When initially introduced, to compete with the British Staffordshire ceramic industry, simple patterns and designs were copied from the English prototypes (Wetherbee 1980). The bodies of these early American copies were thick, as were some British wares, and often decorated with gilt. Likewise, the maker's marks seen on domestic whitewares and ironstones were often subtle copies or slightly altered variations of the standard marks of the British Staffordshire potters. Versions of the Royal Arms including the motto of the Royal Order of the Garter, with lions and unicorns, variations on the Staffordshire knot, and garter shaped marks were quite common. "At first only the English coat of arms or adaptations of it were included with the potter's initials. Later state coats of arms were used widely in the marks of American made dishes. Descriptive terms such as 'ironstone china', 'semi-granite', 'white granite china', or 'paris white' were printed with the potter's mark." (Wetherbee 1980:134).

C. Datable Ceramic Ware Types Present in the PSA 4 Assemblage

1. Brown Stoneware

Brown stoneware bottle sherds of English manufacture (TPQ 1820) were identified from the cistern related structural elements of Components IIIa, IIIb, and the Late Fill (See Table 2). These early 19th century stoneware bottles were most often used to export ink, beer or mineral water. Most of the sherds recovered were not reconstructible into partial or whole vessels. However, one reconstructable brown stoneware bottle was recovered from the interior fill of the stone cistern, Feature 800.04 (Component IIIb). This post-1820 bottle, reconstructed from 28 sherds, was decorated with a mottled brown salt-glazed exterior and impressed with "RAYMOND & FISH" (See Figure 4.1).

Later varieties of Bristol Brown Bottles (TPQ 1850), distinguished by a tan and white color with a shiny glass-like glaze, were also recovered from both the Early and Late Fill. These mid 19th century beer and ale bottles were manufactured in England and "are probably the most abundant of all pottery containers" (Munsey 1970:135).

2. Creamware

Although the initial development of creamware is considered a hallmark of the latter half of the 18th century, it's range of production and popularity continued into the first quarter of the 19th century (Noel Hume 1976, South 1978). Undecorated creamware sherds, with a date range of 1762-1820, represented the predominant individual type identified. This type was present in Component IIIb (Feature 800.04), and the Late Fill. One overglaze enamel decorated sherd (TPQ 1765) was recovered from the interior fill of the stone cistern of Component IIIb (Feature 800.04).

All creamware sherds recovered from the PSA 4 road assemblage can be attributed to English manufacture. The sample consisted solely of fragmented sherds, which did not mend or crossmend into recognizable partial or whole vessels (See Table 5). No maker's marks were present on any creamware sherds.

3. Pearlware

157 sherds of decorated and undecorated pearlware were recovered from Components IIa, IIIa, IIIb, and the Early and Late Fill. Although these pearlware types have late 18th century initial dates of manufacture, their ranges of production as well as popularity continue well into the first quarter of the 19th century.

The datable individual pearlware types identified from the PSA 4 ceramic assemblage included: Undecorated (TPQ 1780), Underglaze blue painted (TPQ 1780), Blue or green edge decorated (TPQ 1790, 1810), Transfer printed (TPQ 1795), Underglaze polychrome painted (TPQ 1795), Annular decorated (TPQ 1790), Embossed (TPQ 1800), and Willow Pattern blue transfer printed (TPQ 1800) (See Table 5).

4. Porcelain

Chinese export porcelain sherds were recovered from Component IIIb, the fill of the stone cistern, and the Early and Late Fill. Sherds attributable to Canton or Nanking, China (TPQ 1800+) were identified. Both types were widely exported to America from ca. 1800, and continued throughout the mid 19th century (Schiffer and Schiffer 1980) (See Table 5).

Canton sherds were identified from the PSA 4 assemblage based on the presence of the distinctive "Rain and Clouds" border motif. "The Canton pattern of underglaze blue decoration was mass produced...The term Canton to identify this pattern seems to have grown out of frequent use in the twentieth century to the point that it now refers exclusively to the porcelain with dash (rain) and scalloped (clouds) border bands inside a blue edge. In strict nomenclature, the generally accepted design for Canton ware has a bridge in the lower right quarter with no one upon it." (Ibid:186).

Nanking pattern sherds identified in the PSA 4 assemblage display a border motif consisting of "spearheads" or alternating daggers and dots in underglaze blue. "One of the mass produced decorations on nineteenth century China trade porcelain includes a Chinese landscape with border of alternating 'daggers' and 'dots'. This decoration is called Nanking, and can be found in green, or the more usual, blue." (Ibid:189).

5. Redware

Examples of redware sherds were recovered from Components I through IV, Vb and the Early and Late Fill contexts. Most of these individual types were analyzed as to paste and glaze, remain undated, and cannot be attributable to a specific country of origin. The exception is that of Jackfield redware (TPQ 1740), which was only recovered from the Late Fill Component which represented a broad mixture of early and late deposits that post dated the abandonment of the cistern. Jackfield ware is characterized by a red body fired to purple or gray, and coated with a deep lustrous black glaze. It was produced from ca. 1740 to 1790 (Noel Hume 1976). "The Jackfield Pottery in Shropshire was founded by Maurice Thursfield in about 1750, but a very similar ware was made in the same period by Thomas Whieldon and others in Staffordshire, Whieldon's having a red body and a slightly more brilliant black glaze." (Ibid:123).

6. Yellowware/American Rockingham

Diagnostic examples of yellowware, both decorated and undecorated, were recovered from Components IIa, IIIa, IIIb, IV, and the Early and Late Fill. Dates of initial domestic manufacture for this ware type varied by region across the U.S. with 1822-1827 for the East (Spargo 1974) but not until between 1839 and 1841 for the Midwest (Gates and Ormerod 1982) (See Figure 4.3 and Figure 4.10).

American Rockingham, a buff or yellow bodied earthenware with a brown, often mottled lead glaze was recovered from Components IIa, IIIa, IIIb, and the Late Fill. It's initial date of manufacture also varied by region with 1812 for New England (Spargo 1974) but not until after 1840 for the Midwest (Gates and Ormerod 1982). Although the sherds identified from the PSA 4 assemblage were not reconstructible into partial or whole vessels, they probably represent teawares.

During the first half of the 19th century, American Rockingham and yellowware of high quality were being produced in quantity at Bennington, Vermont, Baltimore, Maryland, Zanesville, Ohio, and East Liverpool, Ohio. Most of these potteries continued production throughout the latter half of the 19th century as well. Many of the same also produced "white granite" or ironstone china by the third quarter of the 19th Century (Spargo 1974). As discussed above, it is difficult to attribute unmarked sherds to a particular maker or place and date of manufacture. "Often mistakenly referred to as 'Bennington' ware, Rockingham wares (from East Liverpool) vary in glaze color from a rich tan to a dark brown in a variety

of swirled or mottled designs. Without a manufacturer's mark, positive identification of Rockingham is impossible. Both Rockingham and Yellowware were grouped under the term 'Liverpool' ware and the trade name 'Queensware' during the mid 19th century." (Gates and Ormerod 1982:7).

East Liverpool, Ohio became a major ceramic manufacturing center during the 19th century, first producing "Rockingham and Yellowwares" in 1839. By 1895, East Liverpool surpassed Trenton, New Jersey as the nation's leading center for the production of ironstone and whiteware dinner and toilet wares (Ibid). "As early as 1857, East Liverpool pottery manufacturers linked themselves with nation-wide rail connections and distributed 'Ohio Liverpool ware', known as 'Rockingham and Yellowware' to wholesalers in New Orleans and Chicago. During the next 10 years (1857-1867), despite the disruptive effects of a nation wide economic panic and the Civil War, the local industry continued to expand." (Ibid:4).

7. Whiteware

A total of 2,862 sherds of undecorated and decorated whiteware were recovered from the PSA 4 site. These whiteware varieties were recovered from all chronologically distinct component groups and represented 45% of the total ceramic assemblage from the PSA 4 site.

All whiteware sherds identified demonstrated initial dates of manufacture belonging in the first half of the 19th century. However, their dated ranges of production span the entire 19th century, and many continued to be manufactured well into the 20th century. Therefore, for the PSA 4 assemblage, it was necessary to establish dates based only on the identified maker's and Registry marks to identify discrete date ranges of production for these 19th century whitewares.

In order of frequency of occurrence in the PSA 4 ceramic assemblage, the range of identifiable and datable whiteware types included: Blue transfer printed, Mocha decorated, Blue shell edge, Annular or Underglaze painted (TPQ 1830), Thick undecorated and Faded Blue transfer printed, Thick body (TPQ 1850), Plain undecorated (1820-1900+), Green, red, black, sepia, mulberry, brown, purple or gray transfer printed (TPQ 1840), and Flow-blue or Flow-black transfer printed (TPQ 1844) (See Figures 4.9, 4.11-4.14, and 4.16).

Transfer printed whitewares represent the highest percentage of any decorative style of whiteware identified from the PSA 4 assemblage. While the transfer print technique as a decorative style had been in use since the 1770's on creamware and then during the 1790's on pearlware, the end of the first quarter of the 19th century saw a large increase in production of blue transfer printed whitewares. "Vast markets opened up in North America, in Europe, and even in India and other Eastern countries. The home market also expanded and there were very few potters who were not engaged in this profitable trade." (Coysh and Henrywood 1982:10). This situation initially applied to production of transfer printed

pearlwares as well as whitewares. However, by 1830, whiteware became the predominant type. Dinner services were often decorated with transfer prints or series under titles such as "Antique Scenery", "British Views" and "Picturesque Scenery" (Ibid). Many of these transfer prints were copied from engravings by contemporary artists, and a few artists were commissioned specifically to draw scenes which would then be used for transfer prints (Ibid). The transfer printed scenes were usually surrounded by floral borders, which matched on the various size components of a dinner service, even if the central scene varied on the different vessel forms. Makers appear to have regarded these border motifs as a kind of "trade mark" (Ibid). These stylized border motifs are often useful in identifying partial vessels during analysis.

a. Early Transfer Prints

The technique of transferring prints onto refined earthenwares and porcelain transformed the ceramic industry as early as the 1750's. The concept seems simple, but a combination of different skills were required to produce a finished product. The basic procedure, as outlined by Coysh and Henrywood (1982), involved the following steps: First, a design or pattern was selected and engraved onto a flat copper plate; Second, this plate was used to make a print onto a strong, soft, and flexible sheet of tissue paper using warm, oily ink; Third, the printed paper was pressed, ink side down, onto the ceramic vessel using a felt pad, thereby "transferring" the design; and Fourth, the ceramic vessel was immersed in cold water with the printed paper still attached, and while the ink stiffened in the cold bath, the paper floated off, leaving the design or pattern on the ceramic surface.

This process was initially used on ceramic wares which had already been glazed, and was therefore called overglaze transfer printing. It was possible to fix an overglaze print to the glaze by heating the vessel at a relatively low temperature. However, the daily use of such overglaze decorated pieces such as tea wares or dinner services often resulted in damage to the design or would completely wear away the print. This early drawback subsequently led to attempts to transfer print onto biscuit wares, or wares that have undergone the first firing, but not the second, glost firing, which fixes the glaze onto the vessel. "However, the heat of the glost furnace was much greater than that used to fix the overglaze transfer print and this gave rise to early difficulties." (Coysh and Henrywood 1982:8).

Underglaze blue transfer printing revolutionized the British Staffordshire ceramic industry during the latter half of the 18th century. The combination of these two technological inventions, underglaze decoration and transfer printing, allowed for a cheaper, more durable method of producing decorated wares. The underglaze decoration, either handpainted or transfer printed allowed for a more durable decoration than the overglaze painted, as the design was sealed under the glaze during firing, and world not wear off through use. Early transfer prints were applied overglaze and were subject to wear as well. Thus, the combination of underglaze decoration and transfer printing became the preferred method of decoration for the Staffordshire potters. Transfer prints could be reused over and over and

required far less time to apply than hand painting (either under or overglaze) making them more economical to produce in large quantities. The earliest underglaze transfer prints were blue, introduced ca. 1830. "It is important to note that it was necessity, not choice that caused the first underglaze transfer patterns to be in blue rather than in some other color." (Gaston 1993:7). The color blue, made from the mineral cobalt, was the only known color able to tolerate the high temperatures necessary for firing a glaze onto a ceramic body (Ibid). The Chinese had discovered the properties of cobalt blue, and underglaze painted blue and white porcelains had been exported to England during the early 17th century. It was not until the 18th century that English potters were able to successfully emulate this method of blue decoration (Ibid). Zaffre, an oxide of cobalt fused with sand was used to make a pigment in the ink used for blue transfer printing (Coysh and Henrywood 1982:413).

The period 1835 to 1845 was marked by the appearance of significant technical changes in the production methods and styles of transfer printed whitewares. By 1840, it became possible, and therefore profitable (due to advances in potting techniques) to print on refined white earthenwares in colors other than blue. Green, red, sepia, black, mulberry and brown transfer prints became popular by 1840, with the same design series or patterns being used as were first seen on blue printed wares (See Figure 4.13). It is also during this period that patterns became standardized in an effort to produce more wares even more cheaply (Ibid). "This period also saw the introduction of Flow-blue wares which were later to become so popular, particularly for export." (Ibid:10).

b. Flow Blue Transfer

"Flow-Blue" is the term used to describe a particular blue transfer print style which has a smudged or blurred appearance rather than a sharply defined pattern. Initially introduced in 1844, English potters were the first and largest producers of this ware. It had been suggested that the first flow-blue transfer prints were not originally intended to be a unique stylistic innovation, but rather was the inadvertent by-product of the techniques involved in underglaze transfer printing (Gaston 1993). The process of transferring the pattern to be used onto a vessel before firing required that the design be applied in sections, particularly on the borders and sides. If this process was not done carefully, the seams would not match-up correctly and be quite noticeable. "Therefore the technique of causing the blue color to flow during the glaze firing was first used as a means of hiding such decorating faults and to thus keep the design from having such an obvious 'transfer' look. Eventually, the result of this decorating technique became popular itself for this "flown" look, and manufacturers produced wares in this manner for their decorative appeal." (Ibid:8). Flow-blue was first introduced in 1844, and continued to be in demand at least until the early 20th century, particularly in the United States (See Figure 4.14).

Of particular import to production by the British makers of transfer printed whitewares was the Copyright Act of 1842. Since many potters used books of engravings by contemporary artists as the source of their designs, which were also protected by the

Copyright Act, the potters were forced to look elsewhere for patterns to use on transfer printed wares (Coysh and Henrywood 1982). As a result, in the mid 19th century, the stylistic content of transfer printed decorative motifs shifted to more romantic and sometimes imaginary scenes. Many of these later prints were registered with real place names of cities, towns or rivers, but in reality bore no resemblance to the named locality. One such example of a blue transfer printed romantic scene on ironstone was recovered from the interior fill of the stone cistern, Component IIIb (Feature 800.04). The blue printed mark reads "LOZERE IRONSTONE" within an oval cartouche with "E. CHALLINOR" printed below (See Figure 4.12). Edward Challinor operated the Pinnocks Works and Unicorn Pottery at Tunstall, Staffordshire, England from 1842 to 1867 (Ibid, Godden 1964). "LOZERE is the old French province of Languedoc, a mountainous area that slopes down to the Rhone Valley" (Coysh & Henrywood 1982:231). While transfer printed whitewares were still being produced throughout the later half of the 19th century, relatively few new patterns or innovations appeared (Ibid).

8. Ironstone

A total of 1,204 undecorated and decorated ironstone sherds were identified from the PSA 4 site, representing 19% of the total ceramic assemblage. These ironstone varieties were recovered from Components IIa, IIIa though Vb as well as the Early and Late Fill.

Undecorated, thick bodied ironstone represents the ironstone ware type with the highest frequency of occurrence in the PSA 4 ceramic assemblage. Second in number to undecorated sherds, were embossed ironstones with recognizable patterns, with or without impressed or printed maker's marks, Registry marks, and/or pattern names. The least frequently occurring ironstone type was that with blue transfer printed decoration. The initial dates of manufacture for these varieties of ironstone all post date ca. 1850. The date ranges of production, however, as was the case for the majority of whitewares discussed above, span the entire later half of the 19th century, with many types continuing to be manufactured into the 20th century.

It was necessary, therefore, to examine the numerous impressed or printed maker's marks, pattern names, and Registry marks present on base sherds and partially reconstructed vessels to provide, in most cases, more reliable TPQ dates and date ranges of manufacture. In addition, it was possible to examine the embossed patterns present on mended sherds or partially reconstructed vessels in order to determine if they represented recognizable pattern names filed with the London Patent Office, thereby providing a more discrete date range of production.

The major production centers for white ironstone in the United States during the third quarter of the 19th century were concentrated in and around Trenton, New Jersey and East Liverpool, Ohio. Also during this time, just prior to the United States Centennial, the United States government imposed extremely high tariffs on imported goods. According to

Wetherbee (1980:134), the tariffs on imported ceramics were as high as 50%. This impediment to foreign imports clearly must have been a boon to the domestic ceramic industry, which from its inception was in competition with the British Staffordshire based pottery industry.

D. Component Group Summaries of Ceramic TPQ Date Evidence

The major differences apparent when contrasting the ceramic assemblages from the series of stratified PSA 4 site components were: 1) the introduction of new ceramic types; 2) the presence of later documented TPQ dates from the maker's marks on refined earthenware; 3) shifts in the relative frequencies of specific ceramic ware types (See Table 2 and Table 5).

1. Component Group I: Lot 58 Cistern Related Construction

Component Group I consisted of two feature deposits. These two feature deposits, the deep sample from the interior of the stone cistern, and the contents of the builder's trench for the brick inlet drain (Feature 801) were designated Feature 800.05, and Feature 806 respectively.

A total of 75 artifacts were recovered from this component (See Table 1). Eighteen ceramic sherds were identified, 15 of which, or 85%, were datable. Undecorated and decorated whitewares comprised 100% of the datable sample (See Table 5).

The ceramic TPQ for this component, represented by the most recent datable pottery is 1840, based on the presence of one sherd of Black transfer printed whiteware in Feature 806. Blue transfer printed whiteware (TPQ 1830), Underglaze painted whiteware (TPQ 1830), and Undecorated whiteware (TPQ 1820) were also identified. Clear lead glazed redware and Undecorated soft paste porcelain sherds were also present in the sample, and remain undated.

2. Component Group IIa: Lot 59 Early to Mid 19th Century Non-Cistern Related Features

Component Group IIa represents two feature deposits, Feature 902 "the upper pit", and Feature 903, "the lower pit", both located in Excavation Unit 12, Lot 59. A total of 807 artifacts were recovered from this component (See Table I). Of the 294 ceramic sherds identified, 167 or 67%, were datable. Of the 167 diagnostic ceramic sherds, 149 were various types of undecorated and decorated whiteware (See Table 5). The ceramic TPQ for this component is 1850, based on the identification of 39 sherds of Undecorated ironstone, Undecorated whiteware, and Decorated whiteware, representing 23% of the total datable ceramic assemblage of Component IIa.

The appearance of new diagnostic ceramic types in Component IIa, that were not present in Component I, included: Thick, undecorated whiteware (2 sherds, TPQ 1850);

Thick bodied, Faded blue transfer printed whiteware (3 sherds, TPQ 1850); Thick, undecorated ironstone (6 sherds, TPQ 1850); Blue shell edge decorated whiteware (5 rimsherds, TPQ 1850); Flow-blue transfer printed whiteware (2 sherds, TPQ 1844); Undecorated yellowware (2 sherds, 1845 to 1854, and 7 sherds, TPQ 1812); and American Rockingham (1 sherd, 1812).

The mend of two yellowware basesherds recovered from Feature 903, the lower pit deposit, represented the only domestic maker's mark on yellowware recovered from the PSA 4 site. The impressed mark reads "AMERICAN POTTERY CO. -4- JERSEY CITY NJ" within a circle. This particular mark dates from between 1845 and 1854 (Lehner 1988) (See Figure 4.8). The company was sold and dissolved in 1854 (Spargo 1974). As discussed above, numerous large and small scale potteries were in operation in the eastern United States by 1830, notably in Trenton and Jersey City, New Jersey (McAllister & Michel 1993, Spargo 1987). "Due to the efforts of David Henderson, New Jersey soon became the creative leader in the production of yellowware." (McAllister & Michel 1993:8). Of particular note is the fact that David Henderson, one of the earliest potters in Jersey City (ca. 1829), was the head of the American Pottery Manufacturing Company, founded in 1833 (Spargo 1974), which was the forerunner to the American Pottery Company of Jersey City, founded in 1845 (Lehner 1988).

3. Component Group IIb: Lot 59 Early to Mid 19th Century Non-cistern Related Features

Component Group IIb consisted of one feature deposit, the interior fill of the slab covered brick drain (Feature 906), which led into the post 1850 pit features (Features 902 and 903), located in Excavation Unit 12, Lot 59. A total of 197 artifacts were recovered from this component (See Table 1). Of the 45 ceramic sherds identified, 31 or 69% were datable. Of the 31 diagnostic sherds, 30 represented various types of Undecorated and Decorated whitewares (See Table 5).

The ceramic TPQ for this component is 1850, based on the recovery of 7 sherds of Thick bodied, undecorated whiteware which indicated that the pits were filled in or abandoned after this date. Other diagnostic ceramics recovered included: Flow-blue transfer printed whiteware (1 sherd, TPQ 1844); Blue transfer printed whiteware (6 sherds, TPQ 1830); various Decorated whitewares including Green shell edge decorated, Annular decorated, and Underglaze painted (13 sherds, TPQ 1830); Undecorated whiteware (9 sherds, TPQ 1820); and 1 sherd of Jasperware, a late 18th century ware type popular between 1785 and 1825. Despite the associated presence of these earlier ceramic types, the feature was filled and abandoned after the date of the most recent ceramic variety, or after 1850.

The Annular decorated and Green shell edge decorated sherds represented the only new 19th century ceramic types recovered from this component. They are however, distin-

guished by decorative style, and are not of chronological significance. Additional sherds of Buff earthenware, Porcelain, Red earthenware, Glazed redware, and Gray stoneware were also identified in this component and remain undated.

4. Component IIIa: Lot 58 Cistern Related Inlet and Outlet Drain Features - Use and Abandonment

Component Group IIIa consisted of three feature deposits, the interior fill of the brick drain (Feature 801), the interior fill of the rectangular brick construction adjacent to the stone cistern (Feature 803.01), and the interior fill of the cut stone slab covered brick drain (Feature 803.02). All three features were located in Lot 58 and are related to the period of use and abandonment of the stone cistern feature.

A total of 964 artifacts were recovered from this component (See Table 1). A total of 266 ceramic sherds were identified, representing 28% of the total artifacts recovered from Component IIIa, and 198 sherds, or 74% of the total ceramic artifact assemblage from this component was datable (See Table 5). The TPQ for Component IIIa is 1850, based on the identification of 54 sherds of Thick, undecorated ironstone (Feature 803.02), Thick, undecorated whiteware (Feature 801, Feature 803.01, and Feature 803.02), Thick, faded blue transfer printed whiteware (Feature 801 and Feature 803.02), and Embossed whiteware (Feature 801 and Feature 803.02).

A chronologically significant new diagnostic ceramic type was marked by the appearance in Component IIIa of Thick bodied, embossed whiteware recovered from the fill of the cistern drain. While the TPQ for this decorative style is a general date of 1850, more complete vessels of this ware type (ie. complete base vs. individual bodysherds or rimsherds) often display maker's marks, Registry marks, and/or pattern names, which would provide more specific post 1850 dates of manufacture.

Ceramic ware types also recovered from Component IIIa included: Flow-blue transfer printed whiteware (1 sherd, TPQ 1844); Non-blue transfer printed whitewares (14 shreds, TPQ 1840); Other decorated whitewares (59 sherds, TPQ 1830); Yellowware (8 sherds, TPQ 1827); Brown stoneware bottle (2 sherds, TPQ 1820); Undecorated whiteware (51 sherds, TPQ 1820); American Rockingham (2 sherds, TPQ 1812); and Pearlwares (7 sherds, TPQ 1780 and 1795). Sherds of Blue stoneware, Buff bodied earthenware, Buff stoneware, Porcelain, Red bodied earthenware, Glazed redware, Red slipware, and Gray stoneware were also identified from the Component IIIa ceramic assemblage, and remain undated (See Table 2).

5. Component Group IIIb: Lot 58 Cistern Fill and Abandonment

Component IIIb is composed of two fill deposits, both within the stone cistern located in Lot 58. Feature 800.03 represented the uppermost fill of the cistern and yielded 444 artifacts. Feature 800.04, represented the interior fill of the cistern beginning ca. 1 foot below

the rim of the cistern, yielded 9,904 artifacts, the bulk of the material excavated from the interior of the cistern, and represented the highest artifact concentration for any single PSA 4 feature deposit. Together, the feature deposits of Component IIIb yielded 10,348 artifacts, or 43% of the entire PSA 4 artifact assemblage. Of this 10,348 total, 2,558 ceramic sherds were identified, 25% of the Component IIIb artifact count. The datable ceramic assemblage consisted of 1,827 sherds, or 71% of the total ceramics identified from this component.

In addition to containing the largest number of ceramic sherds excavated, Component IIIb displayed the greatest range of individual ceramic ware types, contained the highest percentage of marked and therefore discretely datable sherds, produced the greatest number of reconstructable vessels and showed the most diversity in individual ironstone and whiteware ceramic types recovered from the PSA 4 excavations (See Figures 4.1-4.6, 4.12, 4.15, 4.17, 4.18, 4.19a, and 4.20). Numerous sherds with maker's marks, pattern names, Registry marks and recognizable registered embossed patterns were all identified from within the ceramic assemblage of Component IIIb.

Ceramic ware types recovered from Component Group IIIb, in order of frequency of occurrence are as follows: Ironstone (890 sherds); Whiteware (736 sherds); Redware (237 sherds); Red bodied earthenware (167 sherds); Porcelain (142 sherds); Yellowware (114 sherds); Gray bodied stoneware (91 sherds); White earthenware spalls (45 sherds); Buff bodied stoneware (24 sherds); Pearlware (21 sherds); Brown stoneware (18 sherds); Jasperware (9 sherds); Red bodied slipware (8 sherds); American Rockingham (4 sherds); and 2 sherds each of Blue stoneware, Creamware, Delftware, Parianware, and burned earthenware (See Table 2 and Table 5 for specific TPQ dates).

The ceramic TPQ date for the post abandonment fill of the cistern, Component IIIb, is 1867, based on the presence of a Registry mark on the base of a reconstructed blue transfer printed chamber pot. This blue transfer printed vessel, mended from 37 sherds, displays rural landscape motifs on both the interior and exterior surfaces, and a blue printed Registry mark, dated 1867, on its base. The particular maker of this vessel is not known, but such blue transfer printed scenes were being produced on table, tea and toilet sets by dozens of British potters during the later half of the 19th century.

This 1867 ceramic TPQ date for Component IIIb is supported by the end dates of two additional discretely dated ironstone partial vessels. The first example was an underglaze blue transfer printed ironstone partial plate mend. Four sherds were mended to form approximately 40% of a small plate, which displayed a blue transfer printed landscape scene on the interior, and a blue printed mark "LOZERE" within an oval cartouche with "E. CHALLINOR" below, on its base. As detailed above, Edward Challinor operated the Pinnocks Works and Unicorn Pottery at Tunstall, Staffordshire, England from 1842 to 1867. The mark of "LOZERE" represents the transfer print pattern name (See Figure 4.12).

The second ceramic example which supports the 1867 end date for the cistern fill deposit was identified from an undecorated ironstone base sherd which was found with both a partially impressed Registry mark and a partial black transfer printed maker's mark. The black printed maker's mark illustrated a version of the Royal Arms with a lion and unicorn flanking a crowned shield, with " IRONSTONE CHINA " printed below. The specific maker is unknown as the mark is incomplete, but similar printed marks were commonly used by numerous British potters during the later half of the 19th century. The impressed Registry mark is superimposed upon the printed mark. The letter designation representing the year the design was registered was incomplete, but it was possible to determine that the partial letter could only represent certain years, 1846 to 1867 (See Figure 4.21).

Additional datable printed marks were identified from the Component IIIb sample on individual ironstone base sherds and partially reconstructed ironstone vessels. Although many of these were slightly earlier than 1867 in date, together they help confirm that the cistern was filled and abandoned in the decade of or immediately after the Civil War. One black printed mark was identified on the base of an undecorated ironstone plate sherd, and was dated to ca. 1862. The partial mark consists of floral sprays flanking a crown, with "PINDER BOURNE..." printed below. This mark most likely represents that of "Pinder Bourne & Hope" of Burslem, Staffordshire, England, in operation from 1851 to 1862 (Wetherbee 1980). A later partnership, that of "Pinder Bourne & Co.", was in operation from 1862-1882, also in Burslem (Kovel and Kovel 1986). However, the design configuration, although partial, suggests the former and earlier 1862 TPQ attribution (See Figure 4.21).

A second datable black printed mark was identified on the base of a 9 1/2 inch diameter, molded ironstone plate which was 80% reconstructed by mending 7 sherds, and was manufactured between 1853 and 1861 (See Figure 4.19a). The mark consists of a detailed, well-executed, version of the Royal Arms, a lion and unicorn flanking a crowned shield. Printed below, on three separate lines are "IMPERIAL IRONSTONE CHINA JOHN ALCOCK". This mark is attributable to John Alcock of Cobridge, Staffordshire, England, who was in operation from 1853 to 1861 (Coysh and Henrywood 1982; See Figure 4.19b).

An additional datable maker's mark was identified from Component IIIb which could be dated ca. 1850 to 1859 based on a 90% reconstruction from 10 sherds, forming a 9 1/4 inch diameter, molded ironstone plate (See Figure 4.17). The mark contains both black transfer printed and impressed elements, and consists of a version of the Royal Arms, with a lion and unicorn flanking a crowned shield. Printed below this emblem, on separate lines, are "IRONSTONE CHINA T. GOODFELLOW". Below this mark is an impressed anchor within an almond-shaped, impressed cartouche, attributable to Thomas Goodfellow of Tunstall, Staffordshire, England. Goodfellow operated the Phoenix Works at Tunstall from 1828 to 1859, first producing transfer printed refined earthenwares, and ultimately

"ironstone china" (Ibid). This particular, molded ironstone plate from Component IIIb is thereby dated ca. 1850 to 1859 (Wetherbee 1980).

The date range from the decade from before the Civil War was represented by additional black printed marks identified from Component IIIb. Base sherds of two separate vessels displayed partial black printed marks, dated 1853-1855. The partial marks are attributed to John Venables, a Burslem, Staffordshire, England potter of white ironstone. Venables' operation was apparently limited to a period of ca. 1853-1855 (Wetherbee 1980).

The passing of the Copyright Act of 1842, as discussed above, enabled potters of embossed ironstones to register their particular designs or molded vessel shapes with the London Patent Office, which provided protection against piracy by competitors for a certain period of time. The registration procedure was widely accepted and used by both the designers and manufactures of whitewares an ironstones. This development gave rise to the procedure of marking the vessels not only with the maker's name, but often with the name of the particular design or pattern shape names as well. Printed and impressed marks were both used, with impressed marks becoming more common on white ironstone in the post 1850 period. Several examples of impressed maker's marks and/or pattern name marks were recovered and identified from the Component IIIb (Feature 800.04), which proved critical for dating the ceramic assemblage from the fill of the cistern.

A 6 inch diameter, embossed ironstone saucer, which was 90% reconstructed from 3 sherds, was marked with both the maker and pattern names, and dated 1855-1864. The impressed mark, enclosed within a circle, reads "J. CLEMENTSON" at the top, "IRONSTONE CHINA" in the center, and "DALLAS SHAPE" at the bottom. Joseph Clementson of Hanley, Staffordshire, England was in operation from 1839-1864 (Coysh and Henrywood 1982, Wetherbee 1980). The "Dallas Shape", however, was not registered with the London Patent Office until 1855 (Wetherbee 1980), thus dating this vessel to between 1855 and 1864 (See Figure 4.17).

In addition, two reconstructed embossed ironstone vessels were identified as being of the "Ceres Shape", which was first registered in 1859 (Ibid). The first vessel, a 6 inch diameter saucer, mended from 9 sherds was impressed with both the pattern and maker's names, and reads "E. PEARSON COBRIDGE CERES SHAPE" (See Figure 4.18). E. Pearson, originally a Derbyshire potter who began operation ca. 1805, was in operation at Cobridge, Staffordshire, England by the mid 19th century (Ibid). The "Ceres Shape", so named for the Roman goddess of agriculture, was originated by the firm of Elsmore & Forster, and registered in 1859 (Ibid). This pattern shape was subsequently produced by other firms, including E. Pearson. The second vessel was a teacup, reconstructed from 8 sherds, and was unmarked. The pattern, however, was clearly the "Ceres Shape", and was also dated post 1859 (See Figure 4.18).

Dozens of embossed ironstone sherds identified from the Component IIIb assemblage were of the "Bow-Knot" pattern, most popular during the 1860's and 1870's (Ibid). Many of the rimsherds represented partially reconstructed plates, most did not have bases and, therefore, were lacking maker's marks, making positive or chronologically specific attributions impossible. Two partially reconstructed vessels, however, displayed impressed maker's marks. The first, an 8 inch diameter plate, 60% reconstructed and mended from 12 sherds, was impressed "J&G MEAKIN PEARL-CHINA" (See Figure 4.19b). The firm of J & G Meakin was in operation at Hanley, Staffordshire, England beginning in 1851 (Ibid). The term "Pearl-China" was often used to mark white ironstone during the latter half of the 19th century (Ibid). The second "Bow-Knot" pattern vessel was a 9 inch diameter plate, 75 % reconstructed and mended from 14 sherds. Although the oval shaped, impressed mark was illegible, it most likely was that of J & G Meakin, post dating 1851. The "Bow-Knot" pattern is identical to that of the 8 inch diameter partial plate discussed above. While the impressed Meakin mark is dated post 1851, the "Bow-Knot" pattern shape was popular throughout the 1860's and 1870's.

A 7 3/4 inch diameter plate, dated post 1850, was 100% reconstructed from 8 sherds. The base displayed an impressed Registry mark and maker's mark, both of which were illegible. The embossed pattern, however, was identified as that of the "Huron Shape", popular during the early 1850's (Wetherbee 1980; See Figure 4.15).

Although they pre date the later ironstone and whiteware varieties which established the date of filling for the cistern, numerous "Full Ribbed" pattern sherds and partially reconstructed vessels were recovered from Component IIIb, some of which were marked. Most of these sherds were dated post 1850, a few displayed legible maker's marks. One 6 inch diameter saucer, 75% reconstructed from 7 sherds, displayed an impressed mark of a version of the Royal Arms. The lion and unicorn flanking a crowned shield were discernable, however, the impressed maker's name was not legible, and therefore this vessel could only be dated as post 1850. A second 6 inch diameter, "Full Ribbed" pattern saucer, 90% reconstructed from 9 sherds, was not marked and therefore could only be dated to post 1850.

One similar 90% reconstructed vessel, a 5 1/2 inch diameter saucer, mended from 4 sherds, also displayed a molded "ribbed" pattern and an impressed maker's mark. The name reads "PORCELAIN OPAQUE T & R BOOTE" within an impressed rectangle. T & R Boote operated the Waterloo Pottery at Burslem, Staffordshire, England from 1842 to 1906 (Coysh and Henrywood 1982). This firm first produced blue printed wares, then white ironstone by the mid 19th century. The attribute "Porcelain Opaque" was another term often used during the mid 19th century to mark white ironstone (Wetherbee 1980). This particular T & R Boote saucer is therefore dated ca. 1850.

While the "Dallas", "Ceres", "Huron", "Bow-Knot", and "Full Ribbed" registered patterns discussed above were identified from reconstructed vessels, several additional

registered patterns were present in the Component IIIb ceramic assemblage on individual sherds and fragments, all datable to the 1850's. These additional dated patterns were all identified from individual sherds or partial rim mends. Specific patterns identified included: "Sydenham Shape", registered 1853; "Chinese Shape", registered 1853; "Baltic Shape", registered 1853; and "Mississippi Shape", registered 1855 (Ibid).

Virtually all the identified and discretely dated embossed ironstones recovered from Component IIIb were of English origin. The British ironstone industry evolved directly out of the well established whiteware industry, particularly those located in the well known pottery towns of Staffordshire. Numerous potters, having been involved in the production of refined earthenwares for several decades during the early 19th century, began ironstone production during the late 1840's (Ibid). The early ironstone wares produced were often decorated with the same types or styles of underglaze transfer prints previously seen on the whitewares produced during the 1830's and 1840's.

During the decade of the early 1850's, English potters, trying to retain their influence on the American consumer market, began to design ironstone shapes whose registered names reflected American place names, cities and states (Ibid). Pottery designated as "Mississippi", "New York", "Huron", "Dallas", "Utica", "Union" and "Atlantic" shapes reflect examples of this marketing strategy.

Then, during the late 1850's and 1860's, embossed floral motif elements with leaves, fruits, nuts and grain design motifs became popular decorative styles employed by the English manufacturers and designers of white ironstone. The "Ceres Shape", registered 1859, is such an example.

Despite high tariffs on imported goods following the U.S. Civil War, England still dominated the American consumer china market. By 1865, white ironstone was no longer a novelty to the American consumer, however, English production and imports were still on the increase, and the wares were relatively less expensive and more easily obtainable than wares being produced by the competitive and still developing U.S. domestic ceramic industry (Ibid). By the mid 1870's, however, the domestic whiteware and ironstone industries were well on their way towards dominating the American consumer china market.

6. Component IV: Lot 58, Late 19th Century Feature

Component IV consists of one feature deposit (Feature 805), the contents of the builder's trench for the late ceramic drain pipe (Feature 804) exposed in Excavation Unit 6, Lot 58. A total of 49 artifacts were recovered from the builder's trench fill of this component (See Table 1). A total of 32 ceramic sherds were identified, 24 of which, or 75%, were datable (See Table 5).

Although the pipe appears to have been built after the cistern was abandoned as a water supply, the ceramic TPQ for Component IV was established as being 1850, based on

the presence of 8 sherds of Thick bodied, undecorated whiteware and Thick bodied, embossed whiteware. Certain vessel forms were recognizable (ie. chamber pot sherds), however, as was the case in Component IIIa, these TPQ 1850 ware types could not be dated with more precision, given the absence of marked base sherds or recognizable registered patterns. No new ceramic ware types were present in this component, which could serve to distinguish it chronologically from the date of filling for the cistern (See Table 5).

Additional datable ware types recovered from this component included: Non-blue transfer printed whitewares (2 sherds, TPQ 1840); Other decorated whitewares (7 sherds, TPQ 1830); Yellowware (1 sherd, TPQ 1827); and Undecorated whiteware (6 sherds, TPQ 1820). The presence of these datable ware types confirm a 19th century date of construction for this feature. In addition, sherds of Porcelain, Glazed redware, and Gray stoneware were also identified, but remain undated (See Table 2).

7. Component Group Va: 20th Century Features Lots 58

Separated from the buried cistern by a layer of demolition fill, Component Va consisted of a single feature deposit (Feature 802), a post cistern intrusive trash pit located in Excavation Unit 6, Lot 58. A total of 297 artifacts were recovered from this component (See Table 1). Of this, 30 ceramic sherds were identified, 23 of which, or 77%, were datable. Ironstone and whitewares dominated the datable ceramic assemblage (See Table 5).

Although the ceramic TPQ for this component could only be placed at 1900, based on the presence of a marked ironstone base fragment, the recovery of other datable non-ceramic artifacts placed the fill date for this trash pit as post 1930. The most recent ceramic sherd recovered had a green printed mark that reads, "EDWIN M. KNOWLES CHINA CO." under an urn containing the word "VITREOUS". This mark was in use between 1900 and 1948 (Gates and Ormerod 1982), and represents one of the few American maker's marks identified from the PSA 4 ceramic assemblage. Edwin M. Knowles founded his own pottery in East Liverpool, Ohio in 1900. During the same year Knowles formed a new partnership with C.A. Smith and Albert G. Mason, and constructed a new pottery at Chester, West Virginia, across the Ohio River from East Liverpool. By 1913, the firm built a 15 kiln plant in Newell West Virginia, just south of Chester, and was considered one of the most modern potteries of the district (Ibid). "By 1940 the Edwin M. Knowles China Company was the third largest in the United States and employed nine hundred operatives." (Ibid:99).

Also recovered from this component were sherds identified as Undecorated ironstone, Undecorated and Decorated whiteware, Porcelain, and Gray stoneware (See Table 2). All of these sherds dated to the late 19th and 20th centuries, and cut into and through the post destruction fill that covered the Civil War cistern.

8. Component Group Vb: 20th Century Features Lot 59

Component Group Vb consisted of the interior fill of the rectangular brick privy located in Excavation Unit 11, Lot 59. A total of 420 artifacts were recovered from this component (See Table 1). Of this total, 55 ceramic sherds were identified, 31 of which, or 56%, were datable. Ironstone and whiteware comprise the entire datable ceramic assemblage (See Table 5).

Although the presence of three examples of non-ceramic artifacts date the abandonment of this rectangular brick privy to post 1930, the ceramic TPQ for fill of Component Vb is 1900, based on the presence of a reconstructable ironstone plate (5 sherds) with a printed maker's mark on the base. The green printed mark reads "K.T. & K. CO. 305" under an eagle within a crowned circle, surrounded by "SEMI-VITREOUS PORCELAIN". This mark is attributed to the East Liverpool, Ohio firm of Knowles, Taylor, and Knowles, and is dated ca. 1900-1920 (Gates and Ormerod 1982). This mark represents one of the few domestic ceramic marks identified from the PSA 4 assemblage (See Figure 4.7).

The firm of Knowles, Taylor & Knowles was founded in East Liverpool, Ohio in 1854, and began production of Rockingham and Yellowware. By 1872, the firm switched its production to whitewares and ironstones. By 1877, it was the largest pottery in East Liverpool and was using natural gas to fire its glaze kiln for ironstone, with the claim that it was the first pottery in the world to do so (Ibid). Knowles, Taylor & Knowles increased its capacity during the 1880's, building an eight kiln plant for ironstone production, and by 1888 had constructed a new plant for the production of porcelain. By 1891, they operated 29 kilns and were the largest pottery in the United States (Ibid). Knowles Taylor & Knowles began producing its "semi-vitreous porcelain" ca. 1897, and by the early 20th century had more than doubled its capacity of the previous decade. The firm went into receivership in 1931 and ceased all operations as of that year (Ibid).

Also recovered from Component Vb, but not relevant to establishing its date of abandonment, were sherds of Buff earthenware, Buff stoneware, Porcelain, Red bodied earthenware, Glazed redware, and Gray salt-glazed stoneware. All of these sherds remain undated (See Table 2).

9. The Early Fill Component: Lot 58

This component, the Early Fill, recovered from below the exterior rim of the Civil War era cistern consisted of 5 contexts excavated in Lot 58 (Cx.2.02, Cx.5.03, Cx.8.04, Cx.9.02 and Cx. 15.04). A total of 1,732 artifacts were recovered from the Early Fill (See Table 1). Of this total, 572 ceramic sherds were identified, of which 439, or 77% were datable (See Table 5). Out of this large sample, 113 ceramic items could be dated to the decade of the 1850's.

The ceramic TPQ for this component can be fixed at post 1851, based on the presence of a mend between two molded ironstone plate base sherds recovered from Cx.2.02. These mended sherds exhibit both an impressed maker's mark and impressed Registry mark. The maker's mark reads "T & R BOOTE". T & R Boote operated the Waterloo Pottery at Burslem, Staffordshire, England which produced white ironstone as well as other refined earthenwares from 1842-1906 (Coysh and Henrywood 1982, Wetherbee 1980). The impressed partial Registry mark is dated 1851, which probably represents the date on which the molded pattern shape was registered with the London Patent Office. The partially reconstructed vessel was too incomplete to determine the pattern shape name.

The only other maker's mark complete enough to be identified from the Early Fill component was a blue printed mark on a whiteware base sherd, and was also a British import. The blue printed mark reads "G. PHILLIPS LONGPORT". This mark is attributed to George Phillips of Longport, Staffordshire, England, in operation from 1834-1848. The firm was known for its blue transfer printed wares, particularly designs of distant lands, floral patterns and romantic scenes (Coysh and Henrywood 1982).

In addition to the component TPQ date of 1851 discussed above, 111 sherds or 25% of the datable sample for this component demonstrated a ceramic TPQ date of 1850. These ceramic types consisted of: Bristol brown bottle; Faded blue transfer printed whiteware; Thick bodied, undecorated whiteware; Embossed whiteware; Decorated and Embossed yellowwares; Thick bodied, undecorated ironstone; and Embossed ironstone, (See Table 5).

Other datable ceramics recovered from this component included: Flow blue transfer printed whiteware (1 sherd, TPQ 1844); Non-blue transfer printed whitewares (19 sherds, TPQ 1840); Blue transfer printed and other Decorated whitewares (131 sherds, TPQ 1830); Yellowware (10 sherds, TPQ 1827); Undecorated whiteware (148 sherds, TPQ 1820); Canton/Nanking porcelain (6 sherds, TPQ 1800); and Pearlwares (10 sherds, TPQ 1780 and 1795).

Additional sherds of Blue bodied stoneware, Buff bodied earthenware, Buff bodied stoneware, Porcelain, Red bodied earthenware, Red bodied slipware, Glazed redware, Gray stoneware, and White earthenware spalls were also recovered from the Early Fill component, and remain undated (See Table 2).

10. The Late Fill Component: Lots 58 and 59

The Late Fill component consisted of 19 Contexts excavated in Lot 58 (Cx.1.01, Cx.1.02, Cx.2.01, Cx.3.01, Cx.3.1, Cx.5.01, Cx.5.02, Cx.6.02, Cx.6.03, Cx.8.01, Cx.8.02, Cx.9.01, Cx.14.0, Cx.15.01, Cx.15.02 and Cx.15.03) and Lot 59 (Cx.11.01, Cx.12.01, Cx.12.02). A total of 9,273 artifacts were recovered from this component, or 38% of the total PSA 4 site count (See Table 1). A total of 2,564 ceramic sherds were identified, 1,793 of which, or 70%, were datable (See Table 5).

Although other artifacts documented that the upper fill was laid down in the 20th century, probably after the 1930's, the ceramic TPQ date for this Late Fill component could only be fixed at post 1850, based on the recovery of four rim sherds of "Bead & Reel" embossed, Faded blue transfer printed whiteware from Cx.6.02. While the TPQ for this decorative pottery style can only be fixed with a general date of post 1850, more complete vessels, or a complete base sherd of this type would often display a maker's mark or Registry mark, and would provide a more discrete date range of manufacture after 1850.

This latest date of the decade of 1850 was confirmed by the recovery of 677 ceramic sherds which could be identified with a TPQ date of 1850, and represented 38% of the dated sample for this component. Ceramic ware types with a TPQ date of 1850 included: Ironstone (246 sherds); Thick bodied, Decorated and Undecorated whiteware (414 sherds); Thick bodied, decorated yellowware (12 sherds); and Brown bottle (1 sherd).

In addition to these stylistically dated sherds, one maker's mark recovered from the Late Fill was complete enough to be identified. The printed mark was on the base of a Flow-blue transfer printed whiteware plate/saucer attributable to "WILLIAM ADAMS & SONS". The Adams family of potters dates back to the 16th Century at Burslem, Staffordshire, England, and successive generations of Adams (often named William) operated potteries at Burslem, Cobridge, Tunstall, and Stoke-on-Trent (Coysh and Henrywood 1982). It is necessary, therefore, to identify specific individual marks, particularly on blue printed wares, to be able to attribute them to a particular Adams pottery. The actual blue printed mark on the sherd recovered from Cx.3.01 of the Late Fill was used from ca. 1819-1864 (Gaston 1993). This mark, on the base of a Flow-blue decorated vessel, TPQ 1844, therefore dates from 1844-1864.

Because of the fact that the Late Fill contained a mixture of early and late deposits, a large number of sherds dated to both the late 18th and early 19th centuries. The diagnostic ceramic ware types recovered from the Late Fill provided a date range of 1740 to 1840 (See Table 5). The ware types for these datable sherds included: Non-blue transfer printed whitewares (112 sherds, TPQ 1840); Blue transfer printed and other decorated whitewares (513 sherds, TPQ 1830); Yellowware (55 sherds, TPQ 1827); Undecorated whiteware (276 sherds, TPQ 1820); Brown stoneware bottles (5 sherds, TPQ 1820); American Rockingham (1 sherd, TPQ 1812); Canton/Nanking porcelain (13 sherds, TPQ 1800); Decorated and Undecorated pearlwares (7 sherds, TPQ 1810, 1800, 1795, 1790 and 1780); Jasperware (1 sherd, 1785-1825); Undecorated creamware (11 sherds, TPQ 1762); Jackfield (1 sherd, 1740-1780); and White salt glazed stoneware (1 sherd, 1740-1765).

Sherds of Bisque porcelain, Blue bodied stoneware, Brown stoneware, Buff bodied earthenware, Buff bodied stoneware, Porcelain, Red bodied earthenware, Red bodied slipware, Glazed redware, Gray stoneware and White earthenware spalls were also recovered from the Late Fill component. These sherds remain undated (See Table 2).

11. The Wall Matrix: Lot 58

The Wall Matrix component from the dry laid stone foundation which enclosed the cistern was comprised of 2 contexts located in Lot 58. The first, Cx.1.00, was represented by a single find of a Dutch coin, dated 1823 (See Figure 6.2). The second context, Cx.14.01, was associated with the stone foundation wall and brick drain sections located in Excavation Unit 14. Context 14.01 yielded a total of 18 artifacts (See Table 1).

Seven ceramic sherds were identified from this component, 5 of which were datable (See Table 5). The TPQ date is 1830, based on the presence of 3 Decorated whiteware sherds. These are: one Pale blue floral motif transfer printed whiteware; one Blue shell-edge decorated whiteware rimsherd; and one Annular blue and white decorated whiteware. Two small sherds of Undecorated whiteware, TPQ 1820, represent the remainder of the diagnostic ceramics. Also present in this smallest component assemblage were one sherd each of Undecorated soft-paste porcelain and Mottled brown salt-glazed exterior, Gray bodied stoneware (See Table 2).

Despite these early 19th century datable artifacts from the wall matrix which suggest a deceptively early date for the construction of the stone foundation wall, the fact that the wall cut into and destroyed the upper courses of the inlet drain suggests that the wall was not in fact built until after 1867 when the cobble cistern was abandoned and filled.

In sum, it is seen that the ceramic assemblages from the component deposits of the PSA 4 site contained sherds dating from as early as 1740, up through the middle decades of the 19th century. The largest percentages and greatest diversity of decorative styles, however, are seen in the whitewares and ironstones, dating from the 1830's through 1860's. The identified countries of origin include China, England and the United States, with the overwhelming majority of those identified being British.

E. Chronological and Technological Shifts in Material Culture

In addition to providing a firm chronological framework for the analysis of the relative age and functional relationships of the historic features, this tightly dated sequence of pre and post Civil War era deposits from the PSA 4 excavation, has also provided a significant sample of datable artifacts from many categories which have (through comparisons between the contents of different dated deposits) provided a basis for addressing the presence of general technological changes and shifts in material culture patterns through time for the period from the 1840's through the to the late 1860's. These changes, based on relative artifact comparisons between the dated and quantified units of stratigraphic association and contemporaneity (the Component Groupings), have highlighted several major trends which suggest potentially significant shifts in economy and trade patterns through time. Most marked in the degree of apparent change, both in relative numbers, and in the appearance of new attributes in successive deposits, are major shifts in the kinds of ceramics that were used by the inhabitants before during and after the Civil War. Parallel shifts were also evi-

dent in the kinds, and relative proportions of animal and plant remains. Finally, through the unexpected large sample size and diversity of toys in general, and the recovery of relatively large numbers of decorated and undecorated historic marbles in particular, this collection may provide some previously unavailable insights into the changing technology and economic significance of marbles for the mid 19th century. These shifts provide multiple lines of corroborative evidence which validate the existence and significance of the chronological and stratigraphic integrity of the deposits, as well as the advent presence of important changes, or trends, in the identifiable economic patterns and trade networks which operated in New York City, before, during, and after the Civil War.

1. Changes in Ceramic Preferences and/or Availability:

Significant shifts or contrasts were observed in the relative proportion of various ceramic types through time, of the material used in, and style of, buttons, the relative proportions of animal and plant remains through time, and finally in the material used, size, and decorative techniques used for children's marbles.

Although the majority of the identified ceramic types inventoried from the PSA 4 site represented commonly known and previously documented varieties of ceramics, the tight chronological framework of the stratified Civil War era series of deposits also documented the presence of significant transitions in the relative availability of various pottery types within and throughout this ca. 50 year time span of the archaeological site's stratigraphic history.

When taken at the most general level of comparison, two groups of associated ceramic artifacts could be compared though time based the criteria of being both chronologically distinct and on the having comparable sample sizes. These two major units of comparison are the post 1867 cistern fill, Component IIIb (2,558 identified diagnostic sherds), and a sample of 2,564 artifacts from the post-demolition Late Fill (Component Va), which covered the cistern once it was abandoned. When compared, several inverse trends were clearly apparent for nine types of datable and diagnostic ceramics. Four types of pottery, Whiteware, White earthenware, Porcelain, and Pearlware showed order of magnitude jumps in relative frequency between the two periods. In contrast, five types of diagnostic pottery showed significant drops in relative frequency between the two samples. Ironstone sherds dropped from 890 to 248, a ratio od 3.6:1 over this period, the incidence of red earthenware shifted downward from 167 to 80 or a by a 50%. Comparable drops in frequency were documented for Redware, Stoneware, and Yellowware over the same period of transition between the 1850-1867 deposits, versus the later Component Va deposits. Thus, regardless of the individual technological and chronological implications of each of these shifts, the fact that they occurred during and after the Civil War suggests strongly that these shifts were not haphazard or random, but may in fact have had to do with the effects of the war on local commerce, trade, and life styles.

2. Changing Patterns of Animal and Plant Food Remains:

The use of micro-recovery and water screen procedures resulted in the recovery of 5,207 identifiable animal and plant remains, with the majority being recovered from the waterlogged (and therefore better preserved) lower fill deposits of the Civil War era cistern (Component IIIb). Of the total faunal, or animal bone, sample of 2,777 specimens, the majority (41%) consisted of butchered mammal bone, which was present in all period deposits and showed no significant shift in relative proportions through time. Similar specimens of cut mammal bone were present throughout the pre and post Civil War deposits and showed no major fluctuations (See Table 12). Likewise, the frequency of rodent and bird bone in the various samples does not appear to have changed with a comparable shift in proportion between the era before, to that after, the Civil War (See Table 12).

Only fish bone showed a potentially significant shift through time. Out of a total sample of 343 items, 325, or 95% were recovered from the fill of the cistern dating to after 1867. While this contrast in distribution relative to the uniform representation of mammal bones may only reflect factors of relative preservation, the contrast between the relative frequency of the two faunal categories, especially relative to the total for the cistern fill versus the overlying Late Fill, suggests that an economically significant change in the reliance on fish as a staple may have taken place after the Civil War in this area of New York.

In contrast to the relative continuity through time evidenced by the relative presence of recovered animal remains, the quantified comparison between stratigraphically and chronologically distinct deposits suggests strongly that the frequency and apparent availability of fruits changed radically during the same time period. Out of a total sample of 729 floral remains, consisting of apple, cherry, coconut, corn, gourd, peach, and peanut seeds and pits, the majority of the plant remains (522 or 72%) consisted of orchard products, predominantly cherry and peach. All of the recovered peach and cherry remains came from the post 1867 waterlogged fill of the cistern (See Table 13).

Finally, while the relative presence of orchard fruits predominated in the Civil War era, and appeared to drop off in the Late 19th and Early 20th century deposits (Components IV, V, and the Late Fill), the relative availability of marine shell fish, while present in small numbers early on, prior to and during the Civil War, seems to have significantly increased in proportion in the post Civil War era deposits (See Table 13). In addition, when compared through time, the quantified data also suggests a parallel shift in the relative proportion in clam versus oyster shell between the early and late components. The pre Civil War components of Early Fill (the fill from the pits of Lot 59, Features 902 and 903, and from the fill of the cistern drains) indicated a ratio of ca. 56% clam versus 44% oyster. In contrast, the later components represented by the post 1867 fill of the cistern, and from the post abandonment "Late" fill from above it showed ratios of ca. 50% clam, similar to the earlier sample, but a significant drop from 44% to 30% in the relative availability of oyster between the

decades immediately before and after the Civil War. While the continuity in the availability of clam perhaps represents a relatively secure source, possibly of some distance from the point of consumption, such as Long Island, the drop in Oyster remains may in fact reflect a mid-late 19th century transition to a more degraded environment. Once plentiful as nearly foot long variants off the shore of Staten Island, the increasing over-exploitation and encroachment of urban effluents into the bay, brought about the well documented drop off in the local 19th century Oyster Industry. The shifts observed in the Civil War era deposits documented at 8th Street appear to mirror this loss, or diminution of local oyster beds.

3. Children's Toys: Marbles

Most intriguing of these apparent changes in material culture through time was the realization that the quantified, stratified, and tightly dated depositional sequence documented the existence of several major shifts in the technology and the relative availability of children's marbles through time. While seemingly mundane as an item of play in the early and mid 19th century, marbles and other toy items have emerged as significant indicators of an emerging class of merchants and professional service elements in the expanding mid 19th century population of the City. Specifically, the appearance of toys and marbles in the archaeological record has been taken as socioeconomic indicators of an emerging professional, or leisure, class in New York. In addition to these socio-economic implications, this stratigraphically controlled and dated collection of mid to late 19th century marbles may represent one of the best chronological records for this class of artifact, and may for the first time provide some critical evidence for providing fixed dates for the introduction of several previously ill-defined variants of historic 19th century marbles. The diversity and stylistic sophistication of the 173 toy marbles recovered from the site has documented a series of significant shifts in the relative frequency of different materials, finish, decoration, and size of marbles over time.

Of the total sample of 173 marbles, 19 derived from early ca. 1820-1850 deposits (Components I, IIa, IIb, IIIa, and from the Early Fill), and 134 derived from the post 1867 fill of the cistern (Component IIIb). Five came from the later 20th century feature deposits of Components Va and Vb. Although an additional 15 marbles were recovered from the Late 19th and Early 20th century fill which covered the cistern after its abandonment, this sample was not used for comparative purposes because of the level of physical and chronological mixture of early and late deposits which composed the makeup of the Late Fill. Evidence of change in the composition, materials, size, and decoration of these historic marbles was based on comparisons between the early pre 1850 samples (Components I, II, IIIa), versus the post 1867 sample represented by the cistern fill (Component IIIb).

As was the case for the detailed ceramic analysis which forms the chronological framework for this study, the analysis of changing marble technology and decorative techniques was established using quantified cross-tabulations of the relative presence of different technical variables within and between components. Cross tabulations were rendered as

breakdowns of the relative range of material used, the range in marble size, and finally the relative use of different design and decorative elements of different material categories through time (See Table 8). When compared relative to the two major pre and post Civil War era stratigraphic, or Component groupings defined above, and despite the clear order of magnitude inequality in relative sample size, this quantified comparison suggests that significant shifts appear to have taken place in the relative availability of different marble types between the decades before and after the Civil War.

Six material categories of marbles were recovered from all deposits and periods: unglazed ceramic; glazed ceramic; stoneware; cut stone; glass; and clay. All variants were represented in the later post 1867 deposits. However, in contrast, the pre Civil War era components contained only four of the six material classes, and lacked representation of either stone or glazed ceramic pieces, which did not appear until after 1867 at this site. Glass marbles were present within the ca. 1840-1850 fill of Component IIIa, but absent in the earlier deposits of Components I and II. Conversely, the most recent feature fill deposits from the late 19th and early 20th century features (Components Va and Vb), contained only glass and clay marbles.

While these contrasts in the different material types may reflect only issues of sample size, the relative proportion of clay marbles appears to represent a potentially important shift in regional economic patterns. The majority of the plain clay marbles, 50 out of 55 came from post 1867 deposits (See Table 8). None were recovered from the earliest deposits, and four out of the five from the post 1930 deposits were of clay. Thus, while presumably imported glass marbles appeared to be available in small numbers during the 1840's through the 1860's, post 1867 the majority of marbles recovered from the site were made from low fired and presumable locally manufactured, undecorated clay (See Tables 14 and 15).

While glass as a material group was clearly present during the mid 19th century, when evaluated from the perspective of decorative elements used, the post 1867 sample from the cistern fill documented the introduction of the majority of decorated glass types. Only two variants of decorated glass marbles were recovered from the early 1851-1867 sample, one with polychrome swirls (ps) and one with opaque green and white swirls (ogws) (See Table 18 and Figure 7.17). In contrast, in the cistern fill deposited after 1867, five additional color and internal glass decorative patterns were in evidence. These late additions to the repertoire of mid 19th century marbles included plain opaque green glass, opaque green with interior swirls, opaque with swirls, royal blue glass, and finally translucent glass marbles with interior swirls (See Tables 17-18).

Comparable shift were also apparent in the relative frequency of painted and decorated fired ceramic marbles. In addition to the predominance of low fired clay marbles in the post 1867 cistern fill sample, the appearance of painted decoration of both glazed and unglazed ceramics appears to have been a post 1867 phenomena. The pre 1851 sample of

painted ceramic marbles was limited to two unglazed examples, each painted with a geometric pattern of criss crossing lines as perpendicular bands around the body (See Tables 14-17, and Figure 7.17). However, after 1867 the glazed ceramic marbles first appeared with a range of new decorative techniques. Three decorative motifs can be recognized in the post 1867 sample which were not represented earlier. The three examples of decorated glazed ceramic marbles included one with a floral design alone, one with a floral and geometric combination, and finally one which has been classified as the "Bennington Type" by collectors, distinguished by the use of brown mottled surface glaze. Decorated patterns on unglazed post 1867 examples included both geometric and floral design elements as well as combinations of both (See Table 17b and Figure 7.17). Thus, in addition to the advent of decorated glazed ceramic marbles in general, the post 1867 period was distinguished by the advent of floral and possibly Bennington types.

Finally, when cross tabulated by relative size through time, the two dated sample groups of pre and post Civil War era marbles also suggest the manifestation of significant shifts in the relative availability of marbles of different sizes over this period. From the relatively limited pre-1851 sample (Components IIb & IIIa), all marbles were restricted in size to a range of 11 to 18 mm in diameter. In contrast, the much larger sample of post 1867 specimens showed a significantly broader range in marble sizes of from 11 to 38 mm in diameter. While the median, or ca. 77%, of these later examples fell within the same size range as those of the earlier sample set, a total of 23, or 17% ,of the later sample were significantly larger and ranged in diameter from 19 to 38 mm, sizes which were not represented in the pre 1851 sample.

Thus, in sum, based on the clear stratigraphic sequence and associations with other classes datable artifacts, it was possible to suggest several lines of chronologically and economically significant changes in marble technology for the period immediately before and after the Civil War. First, the later varieties were distinguished in the sequence by the post 1867 advent of glazed ceramic marbles, and by the appearance of some with geometric designs beginning before 1851, but with the majority distinguished by the advent of floral decorative motifs only after the 1867. In addition to the apparent availability of a greater variety of decorated glass marbles, and specifically the late appearance of royal blue translucent, opaque green glass with interior swirls, and the addition of glazed ceramic varieties with hand painted decoration, perhaps one of the most numerically impressive contrasts through time is manifested by the relative proportion of unfired, or low fired, clay and stoneware marbles before 1851 and after 1867.

For the earlier sample group predating 1851, out of a total of 17, 11 or 64% consisted of stoneware marbles, with only one example of clay. After 1867 the use of stoneware continued but dropped in frequency to only 24% in the later sample. However, for the more recent, post 1867 sample group, the incidence of unglazed and low fired clay examples increased to 57% of the sample. This shift is suggestive, because it raises the possibility that

the increase in clay and ceramic marbles may have reflected the effects of economic conditions in general, or specifically immediate limitations in the availability of specialized luxury items from Europe in New York City during and immediately after the Civil War.

Grossman and Associates, Inc. 1995

Figure 2.1. Panoramic view of the archaeological excavation, looking west across Lot 58 and Lot 59, showing all weather shelters and structural planks to protect the site and the archaeologists.

Grossman and Associates, Inc. 1995.

Figure 2.2. Close up of archaeological excavation showing the initial grid based exposure of buried Civil War era stone wall and cistern complex.

Grossman and Associates, Inc. 1995.

Figure 2.3. Staff shown recording XYZ coordinates of historic features with the Grossman and Associates, Inc. computer transit EDM system to a resolution of 1/100th of a foot.

Grossman and Associates, Inc. 1995.

Figure 2.4. Excavation team shown water screening the waterlogged, historic Civil War era cistern fill (Context 8.03C and 8.03E, Feature 800.04).

Grossman and Associates, Inc. 1995.

Figure 2.5. General view of the excavation in progress showing individual crew members working in discrete 5 foot grid control units under portable shelters and using protective gangways to transport the excavated soil.

Grossman and Associates, Inc. 1995

Figure 2.6. General view looking northeast showing the excavated remains of the partially preserved, rectangular dry laid corner section of an historic early 19th century building foundation within Lot 17 which was documented in the initial Stage IB site definition phase of the investigation.

Grossman and Associates, Inc. 1995.

Figure 2.7. Close up perspective view of Lot 17 showing the modern cement lot line party walls on either side of the historic, dry laid stone building "lot line" of the 19th century foundation documenting that between the mid 19th and 20th century the historic lot lines had shifted at least 12 feet to the east or west.

Grossman and Associates, Inc. 1995

Figure 2.8. General photogrammetric view looking southwest showing the excavated pre Civil War cistern complex exposed ca. 3 to 5 feet below the 20th century demolition surface within the historic rectangular dry laid stone building foundation wall within Lot 58.

Grossman and Associates, Inc. 1995

Figure 2.9. Near overhead photogrammetric view looking south showing the fully excavated pre Civil War cistern and drain system with rain water trapped in the cistern demonstrating its water tight structure after ca. 130 years of abandonment.

Grossman and Associates, Inc. 1995

Figure 2.10. Perspective photogrammetric view of the fully excavated cistern complex looking southwest showing the presence of a terra cotta inlet pipe which was added to the cistern following its abandonment as a potable water supply system, for possible re-use as a sump.

Grossman and Associates, Inc. 1995

Figure 2.11. Close up view of excavation team members shown waterscreening to recover artifacts from the waterlogged matrix of the interior fill of the cistern.

Grossman and Associates, Inc. 1995

Figure 2.12. Close up view of an historic key and preserved wooden clothespin recovered from the waterscreening of the waterlogged matrix of the cistern within Lots 58.

Grossman and Associates, Inc. 1995

Figure 2.13. Detailed view of one half of the interior of the pre Civil War cistern in the process of being excavated, showing the dense matrix of well preserved historic artifacts being exposed.

Figure 2.14. Close up view of the partially excavated interior fill of pre Civil War cistern showing the dense concentration of well preserved ceramic and glass artifacts prior to their removal for conservation.

Figure 2.15. Perspective view looking east of the partially excavated cistern showing 5.5 foot matrix of upper and lower fill deposits to a depth of 8.5 feet below modern grade.

Figure 2.16. Detailed view of the inlet and outlet drains found leading into and out of the circular dry laid stone cobble cistern within Lot 58. Note the presence of the carved stone "spigot" at the end of the small brick and cut stone inlet drain to the left, and the use of dry laid stone slabs forming an access basin built into the edge of the cobble cistern and leading to the outlet drain on the right.

Grossman and Associates, Inc. 1995

Figure 2.17. Detailed view of the brick and stone drain system leading into the circular dry laid stone cistern to the right, showing the thinner brick lined inlet drain running beneath the building wall, with the later mold made terra cotta drain pipe (which post dated the cistern) in the foreground within Lot 58 (Features 801, 803, and 804) (See Figure 1.1).

Figure 2.18a. Detailed view looking north at the partially exposed cistern inlet (right) and exit (left) drains running into the cistern beneath the dry laid stone wall of the late 19th century building which surrounded and was built over the cistern within Lot 58.

Grossman and Associates, Inc. 1995.

Figure 2.18b. Detailed perspective view of the exposed stone and brick outlet drain after removal of slab cap stones within Lot 58. The base of the drain was constructed of rectangular dry laid stone slabs, with the sides made of mortared red brick.

Grossman and Associates, Inc. 1995.

Figure 2.19. General view looking north showing the partially excavated cistern and drain system within the excavation grid matrix of Lot 58, showing the smaller inlet drain having been partially destroyed during the construction of the later 19th century historic foundation wall which enclosed the cistern.

Figure 2.20. Detailed view of the exposed and partially excavated small inlet drain (Feature 801, Component IIIa), showing the upper course of the brick drain disturbed and rendered non-functional by the construction of the later stone foundation wall.

Grossman and Associates, Inc. 1995

Figure 2.21. View looking due east at a north-south profile section across the dry laid stone foundation wall, over and through the earlier brick and stone inlet drain (Feature 801), showing the historic disturbance and removal of the upper courses of the drain. The layer of soil bedding beneath the wall and over the drain documents that the drain pre-dated the historic building foundation.

Grossman and Associates, Inc. 1995

Figure 2.22a. Formal view looking north showing an historic pit feature (Feature 902 and 903) against the lot line of modern Lot 59, with a collapsed brick wall covering the earlier, mid 19th century brick and stone drain system (Feature 906) which cut through and into the partially disturbed historic pit matrix.

Figure 2.22b. Close up view looking east at Feature 906 within Lot 59, showing a collapsed brick wall element over and partially through the historic artifact filled drain feature.

Grossman and Associates, Inc. 1995.

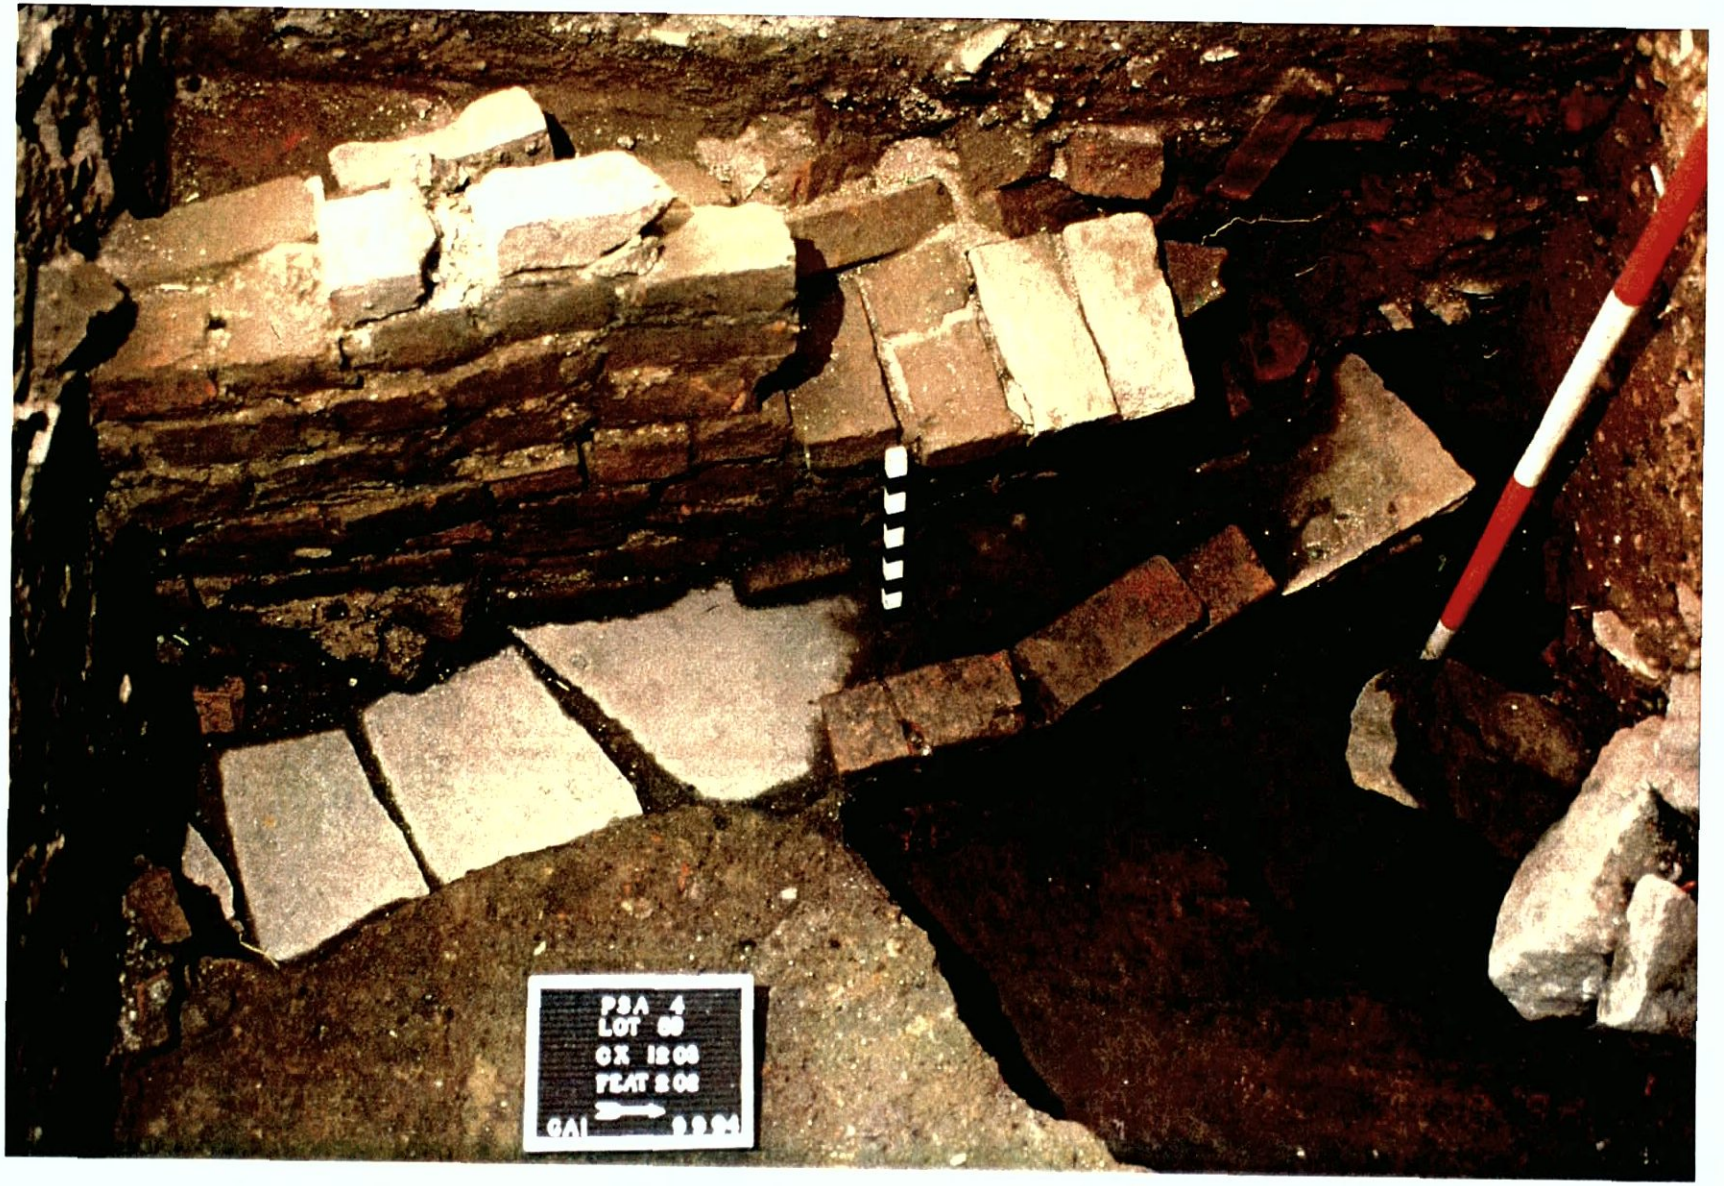

Figure 2.23. Detailed close up view of the brick and stone drain, Feature 906, and base of pot, Feature 903 after excavation within Lot 59, showing a collapsed brick wall element, partially covering the underlying brick and stone drain system similar to and generally contemporary with those excavated in Lot 58 in association with the post 1840 cobble cistern.

Grossman and Associates, Inc. 1995

Figures 2.24a and 2.24b. General and close up view of the profile through an early 20th century trash pit on the exterior south side of the dry laid stone wall, which cut into and through the first level of the post destruction fill covering the abandoned historic cistern within Lot 58. The recovery of molded safety glass and other 20th century artifacts in association with a 1916 Lincoln head penny found buried below it stratigraphically documented that the historic cistern was destroyed, abandoned, and filled prior to the first quarter of the 20th century.

Grossman and Associates, Inc. 1995.

Figure 3.1. Profile view of two complete mid 19th century olive green glass bottles recovered from the post 1867 interior fill of the pre Civil War cistern within Lot 58. The specimen at the left has a bell shaped base, champagne shoulder and flattened string rim with a large mamelon on the base. The taller olive-amber bottle on the right is finished with a contoured tooled lip and string rim, and has a domed base with an abrupt heel (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995.

Figure 3.2. Photograph of three medicine or apothecary bottle containers recovered from the Civil War era interior fill of the cistern within Lot 58 (Feature 800.04, Component IIIb). Bottle "a" has a light aqua tint, rounded shoulder, and slightly tapered body with an abrupt heel and a flaring prescription lip. Bottle "b" is of a reddish tint with a folded lip and the press molded imprint of "Lyons Powder" and "B & P N.Y." on the sloping shoulder. Bottle "c" is a light green tinted flask shaped medicine or chemical vessel with flared lip and was found with cork and liquid contents.

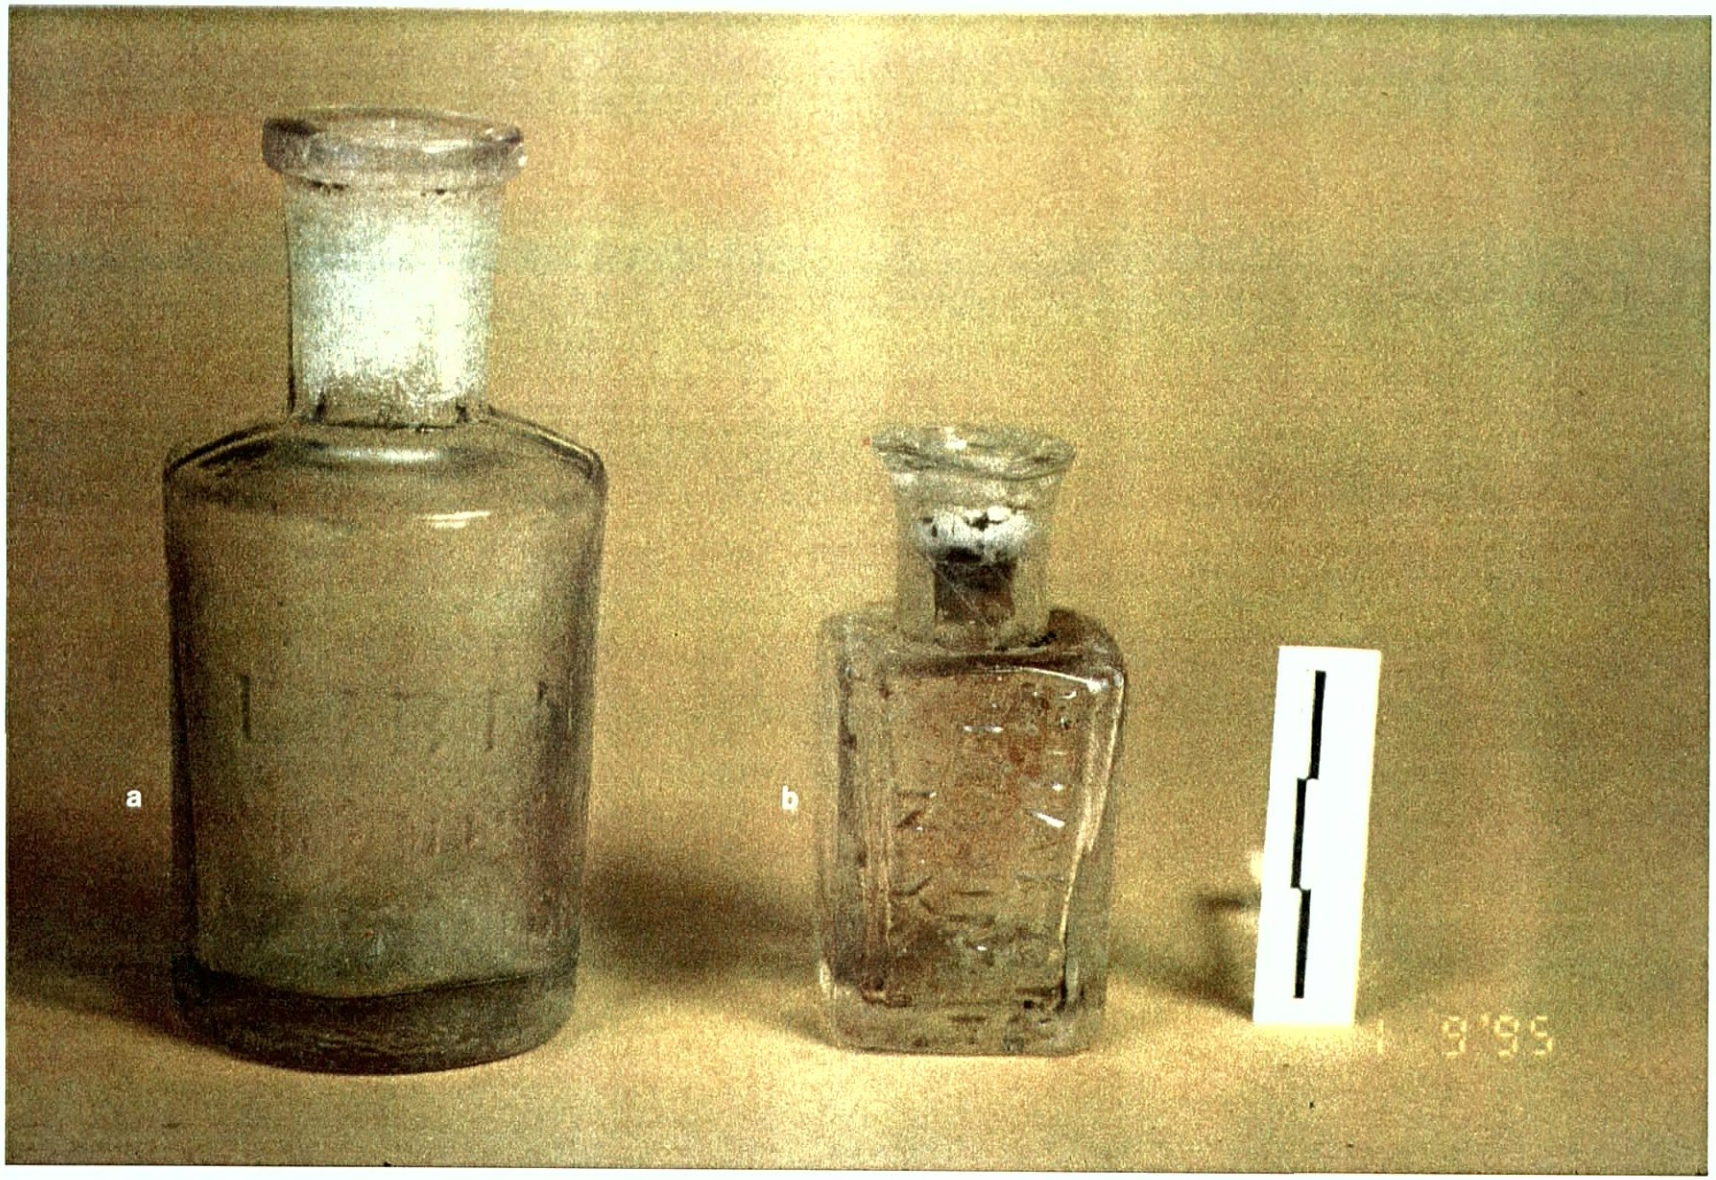

Figure 3.3. Two small perfume bottles recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb). Bottle "a" has a clear and slightly tapered body and shoulder with a patent lip and a molded inscription of "Lubin Parfumieur Paris" on its front. Bottle "b" on the right is a clear rectangular vessel with chamfered corners and flanged lip, found with cork in place, marked with a molded exterior emblem "Phalon Perfumer N.Y."

Grossman and Associates, Inc. 1995

Figure 3.4. Four beer or ale bottles by various manufacturers recovered as a group from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb), each is marked with a manufacturer's label: a: "C. Whittemore. New York."; b: "McKenna & Co. N.Y."; c) "T & W 141 Franklin St. N.Y."; d) "Philadelphia XXX Porter & Ale".

Grossman and Associates, Inc. 1995

Figure 3.5. Two glass beer or ale bottles recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb), each made with a circular body, a sloping shoulder and down-tooled lip. The bottle on the left is marked "P. Cotter 49 Mercer St. N.Y." and the bottle on the right is marked "Weber & Volz NY".

Grossman and Associates, Inc. 1995.

Figure 4.1. Ceramic stoneware bottle (post 1820) reconstructed from 28 sherds decorated with mottled brown glaze and impressed with "Raymond & Fish", recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995.

Figure 4.2. A partially reconstructed undecorated whiteware octagonal pitcher (post 1850), recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component III-B).

Figure 4.3. Profile view of a yellowware chamber pot decorated with fine horizontal blue and white bands on the shoulder (post 1850), recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

Figure 4.4. Profile view of a reconstructed redware ceramic chamber pot finished with clear and mottled brown glaze (no date), recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

Figure 4.5. Profile view of two reconstructed white ceramic chamber pots both post dating 1850, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, *Component* IIIb), pot "a" is thick bodied, undecorated ironstone and pot "b" is thick bodied undecorated whiteware.

Figure 4.6. Profile view of two of four reconstructed, undecorated white ironstone (a) and whiteware (b) chamber pots, post dating 1850, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

Figure 4.7. Close up view of a datable ceramic sherd with the green printed maker's mark of "K T & K Co. 305 Semi-vitreous porcelain" manufactured by the Knowles, Taylor & Knowles Co. of East Liverpool, Ohio which provides the manufacture date range of 1900 to 1920 for the time of abandonment and filling of the rectangular brick privy excavated in Lot 59 (Feature 901.02, Component Vb).

Figure 4.8. Detailed close up view of a datable maker's mark on the base of a yellowware ceramic sherd recovered from the fill of the lower pit Feature 903, Component IIa within Lot 59. The impressed maker's mark "American Pottery Co - 4 - Jersey City, N.J." has an initial manufacture date range of 1845 to 1854, which documents that the historic pit feature in the rear of Lot 59 was filled in and abandoned after this time period.

Figure 4.9. Four ceramic sherds of undecorated but temporally diagnostic whiteware and stoneware, all manufactured as of 1820, which together indicate that initial construction of the stone cistern and stone features in Lots 58 and 59 post date the first quarter of the 19th century.

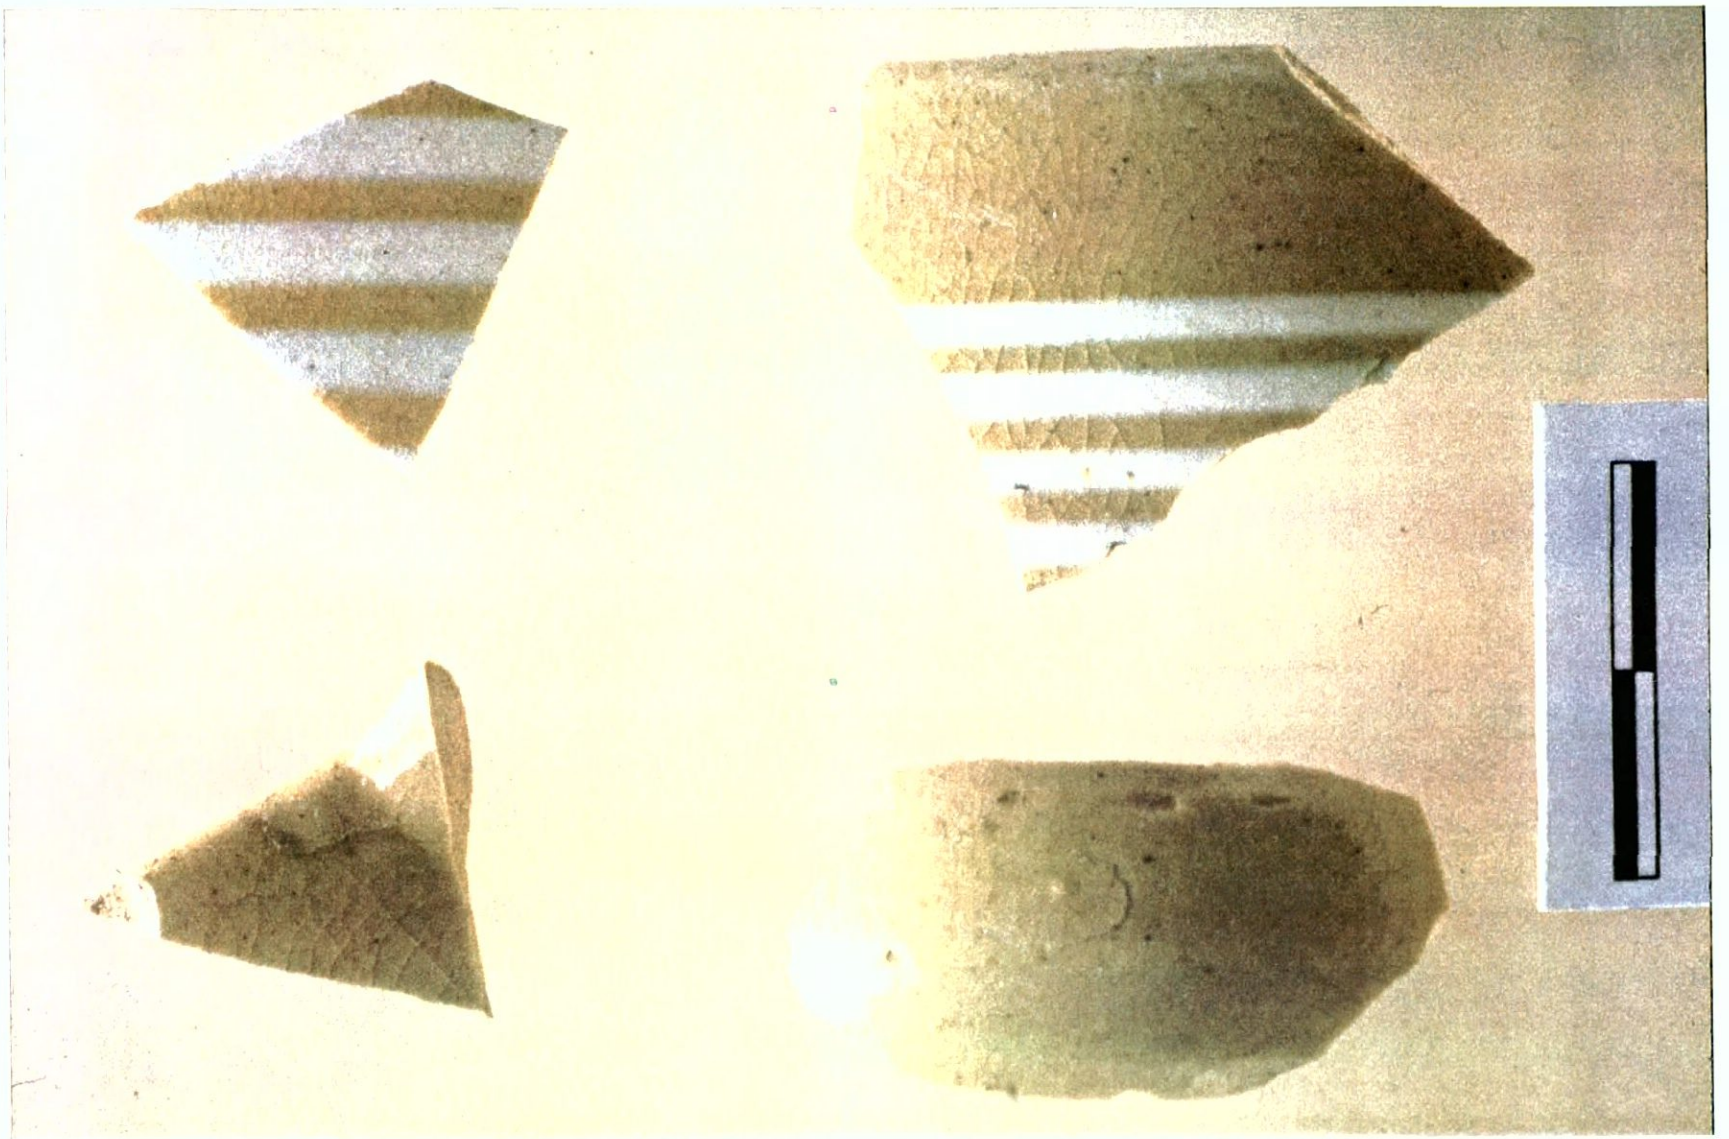

Figure 4.10. A representative sample of four diagnostic yellowware ceramic sherds, 2 undecorated and 2 with white banded decoration on the exterior, which have initial manufacture dates of 1827 and were recovered from the pit fill of Features 902 and 903 (Component IIa) within Lot 59 and from the interior fill of the exit drain, Feature 803.02 (Component IIIa) within Lot 58.

Figure 4.11. A representative sample of diagnostic and datable decorated whiteware ceramic sherds including Blue transfer printed, Sponge decorated, Underglaze polychrome painted, Green shell edge, and Annular decorated recovered from various contexts of Components IIa, IIb, and IIIb, all with an initial manufacture or TPQ date of post 1830.

Grossman and Associates, Inc. 1995

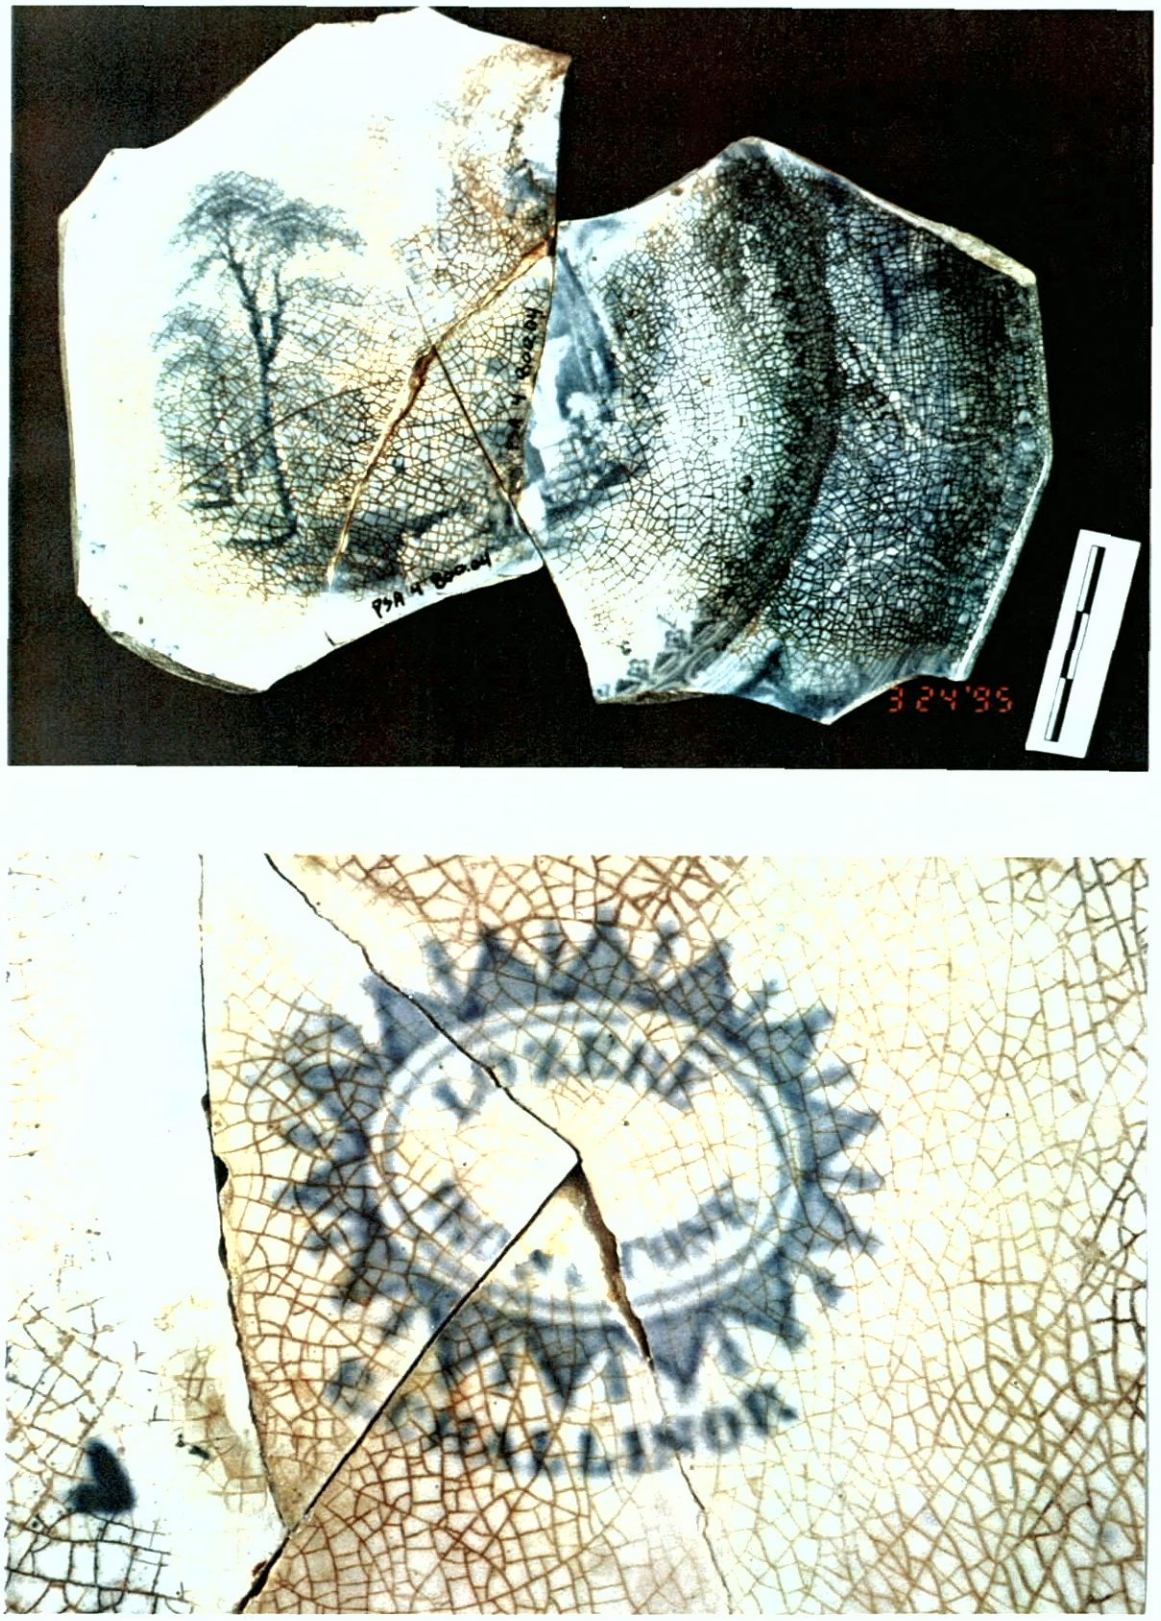

Figure 4.12. Interior view of a blue transfer printed plate (top) recovered from the interior fill of the cistern within Lot 58 (Feature 800.04, Component IIIb) with an identifiable maker's mark (bottom), "LOZERE IRONSTONE E. CHALLINOR" which was manufactured in Staffordshire, England between 1842 and 1867.

Grossman and Associates, Inc. 1995.

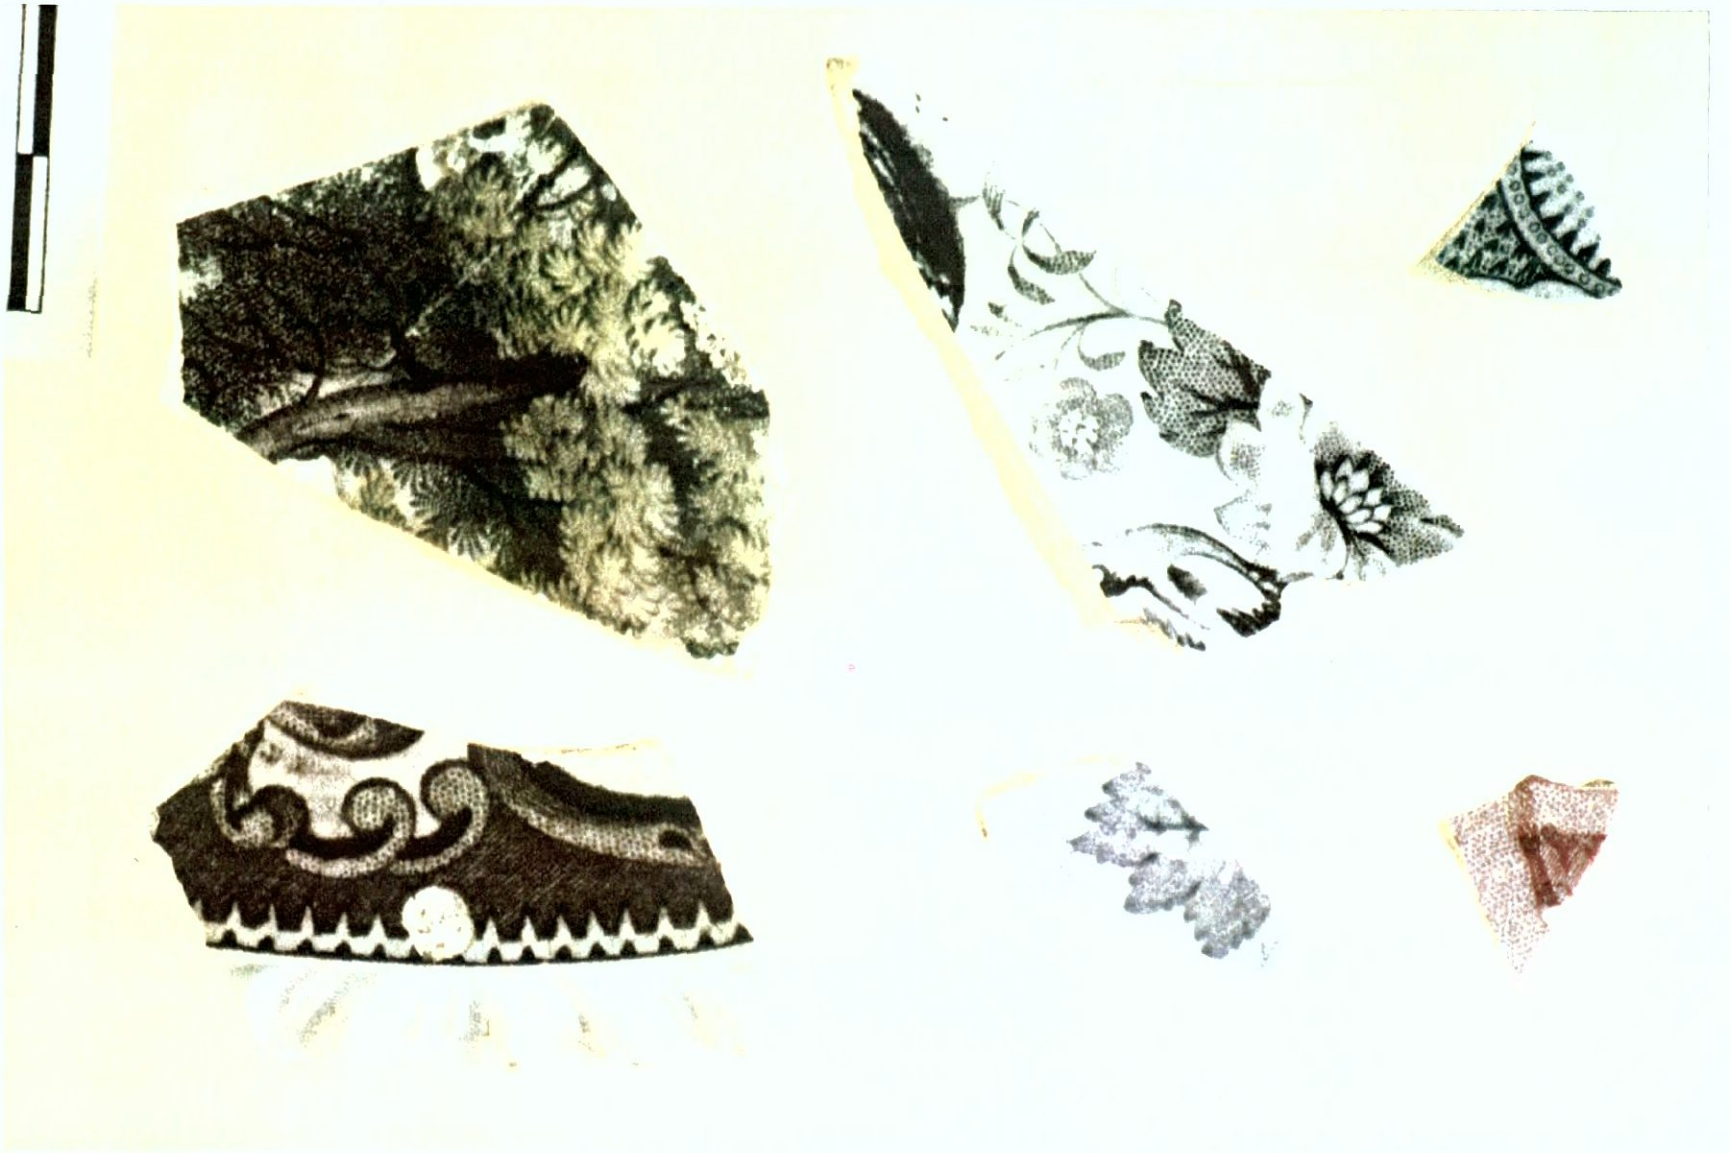

Figure 4.13. A representative sample of datable and diagnostic Transfer printed whiteware ceramic sherds decorated with a range of colors (black, green, red, purple, and brown), all of which were initially manufactured after 1840. These types provide ceramic TPQ dates of 1840 for the initial use of the historic cistern and drains within Lots 58 and 59 (Components IIa and IIIa).

Figure 4.14. Three rim and handle ceramic sherds of chronologically diagnostic transfer printed whiteware decorated, which was initially manufactured after 1844, recovered from the Civil War era features within Lots 58 and 59 (Components IIa, IIb and IIIa).

Figure 4.15. Plan view of completely reconstructed "*Huron Shape*" embossed ironstone dinner plate initially manufactured in England after ca. 1850, recovered from the interior fill of the cistern in Lot 58 (Feature 800.04, Component IIIa).

Grossman and Associates, Inc. 1995

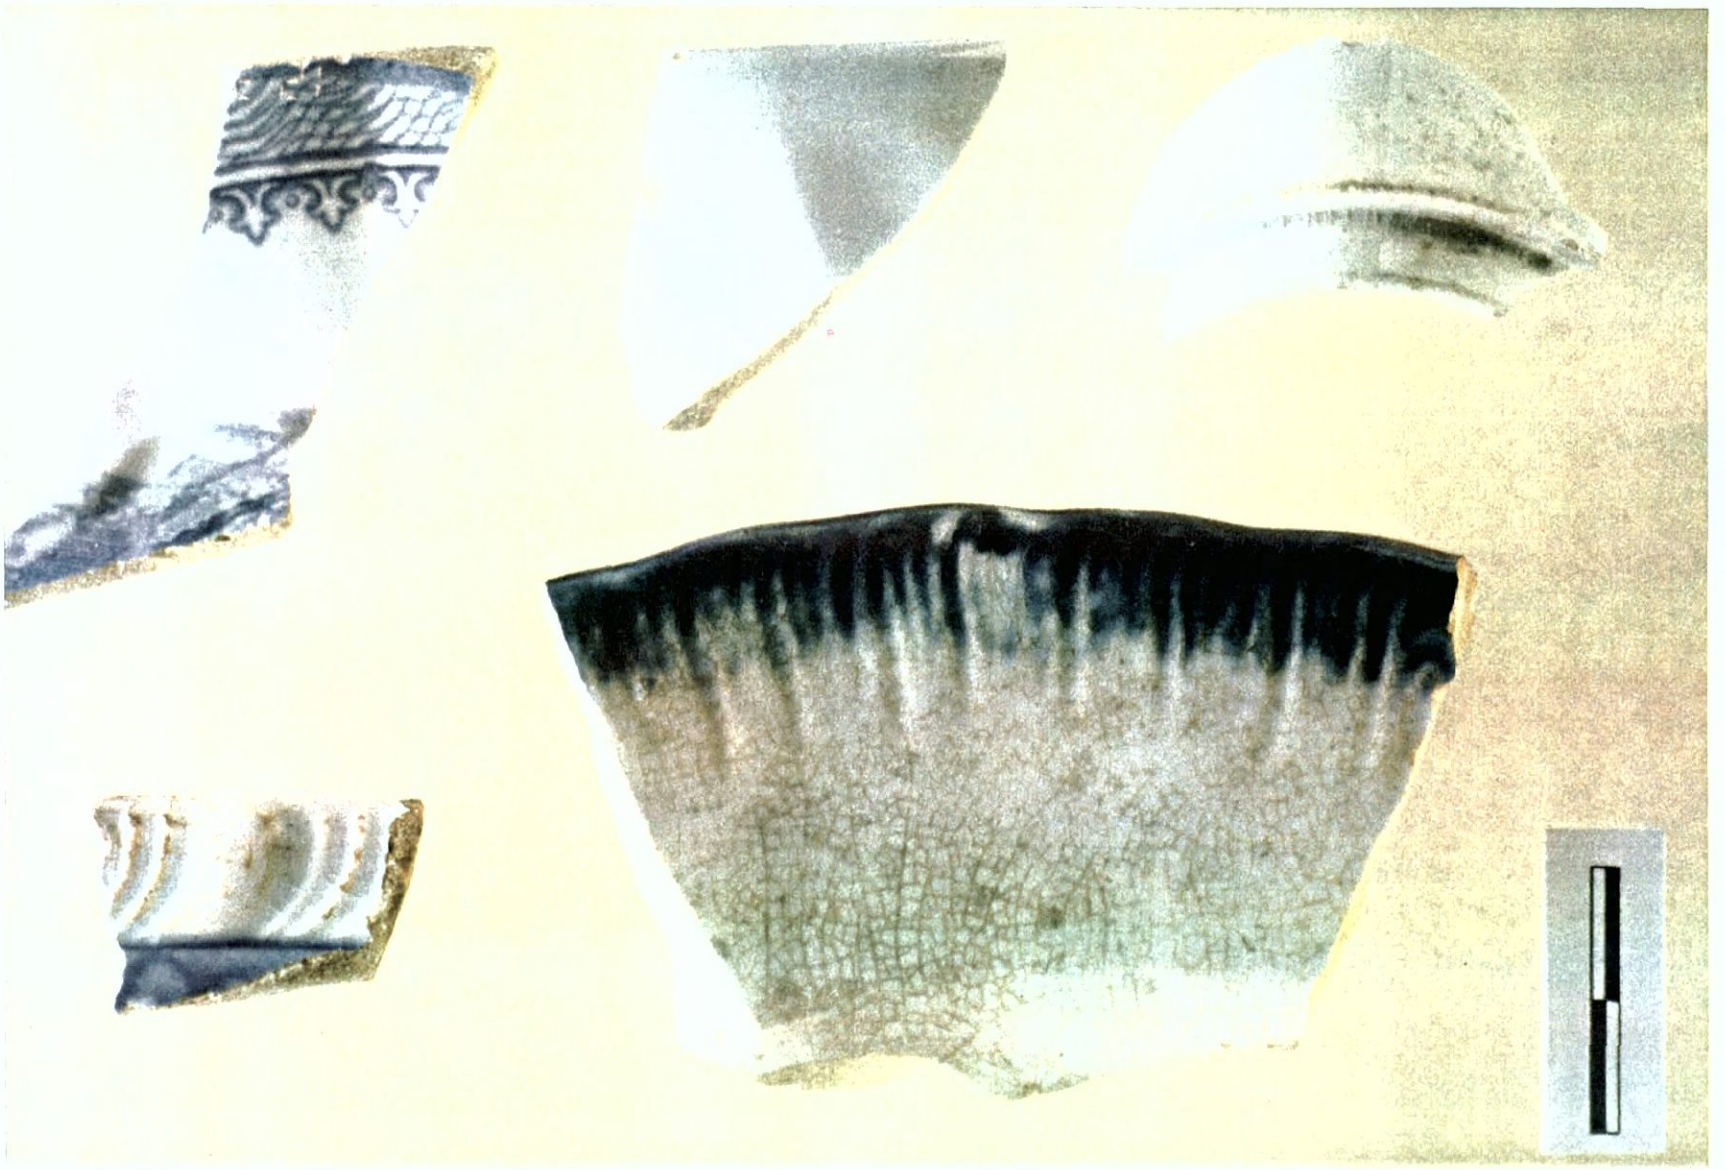

Figure 4.16. Sample of decorated and undecorated whiteware sherds including Blue transfer printed, Embossed, and Blue shell edge decorated, all with an initial manufacture date of post 1850 from various mid 19th century features in Lots 58 and 59 (Components IIa and IIIa).

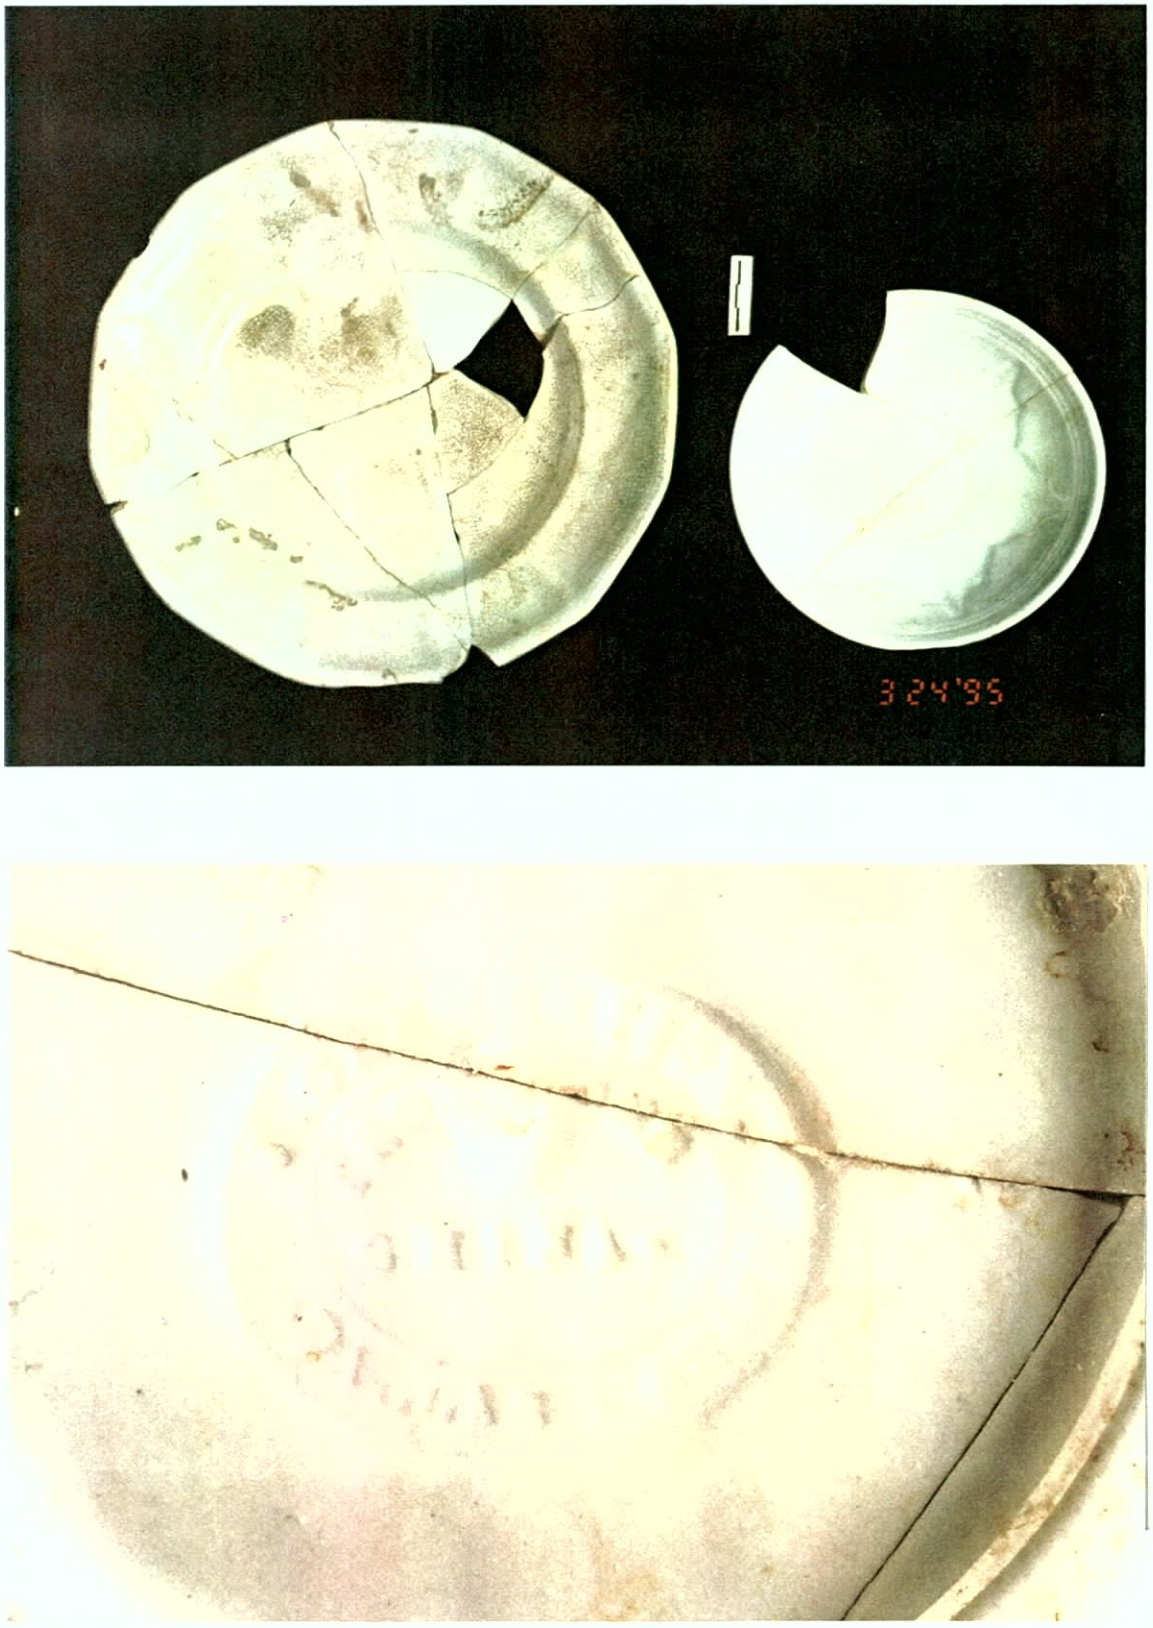

Figure 4.17. Reconstructed ceramic ironstone plate and saucer both recovered from the interior fill of the stone cistern within Lot 58, found with datable maker's marks imprinted on the base (Feature 800.04, Component IIIb). Top left: Manufactured by Thomas Goodfellow between 1850 and 1859. Top right: Manufactured by J. Clementson between 1855 and 1865. Bottom: Close up of Clementson's impressed maker's mark of "J. CLEMENTSON IRONSTONE CHINA DALLAS SHAPE".

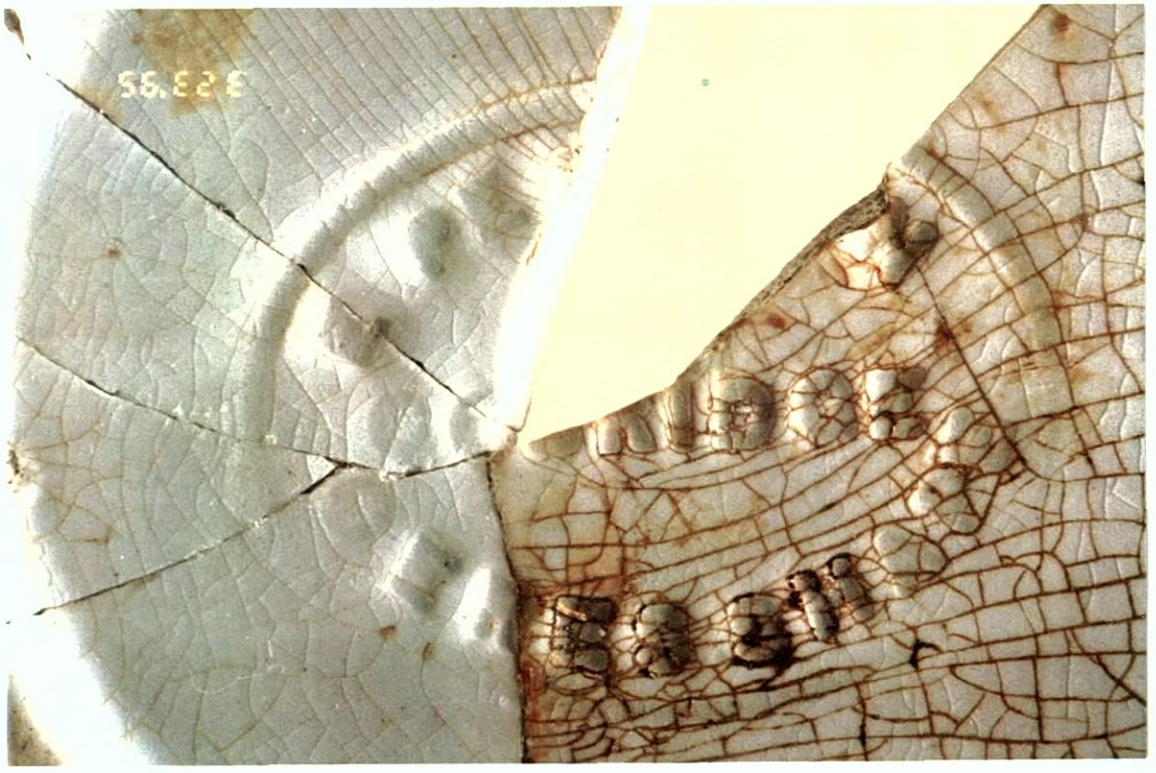

Figure 4.18. Top: Plan and profile view of a reconstructed "Ceres Shape" ironstone cup and saucer recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb), and manufactured by E. Pearson beginning in 1859. Bottom: Close up photo of datable maker's mark on the base of the reconstructed saucer impressed with "E. PEARSON COBRIDGE CERES SHAPE" which was originally registered in 1859.

Figure 4.19a. Overhead plan of two ironstone ceramic plates with datable black printed maker's marks, both initially manufactured in the decade preceding the Civil War in Staffordshire, England and recovered from the interior fill of the cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

Figure 4.19b. Top: Close up of the transfer printed maker's mark of "IMPERIAL IRONSTONE CHINA JOHN ALCOCK" which was manufactured between 1853 and 1861. Bottom: Close up of maker's mark "J & G MEAKIN PEARL CHINA" which was manufactured post 1851.

Grossman and Associates, Inc. 1995.

Figure 4.20. Group of reconstructed whiteware and ironstone ceramic cups all manufactured after 1850 and recovered from the interior fill of the stone cistern in Lot 58 (Feature 800.04, Component IIIa).

Grossman and Associates, Inc. 1995

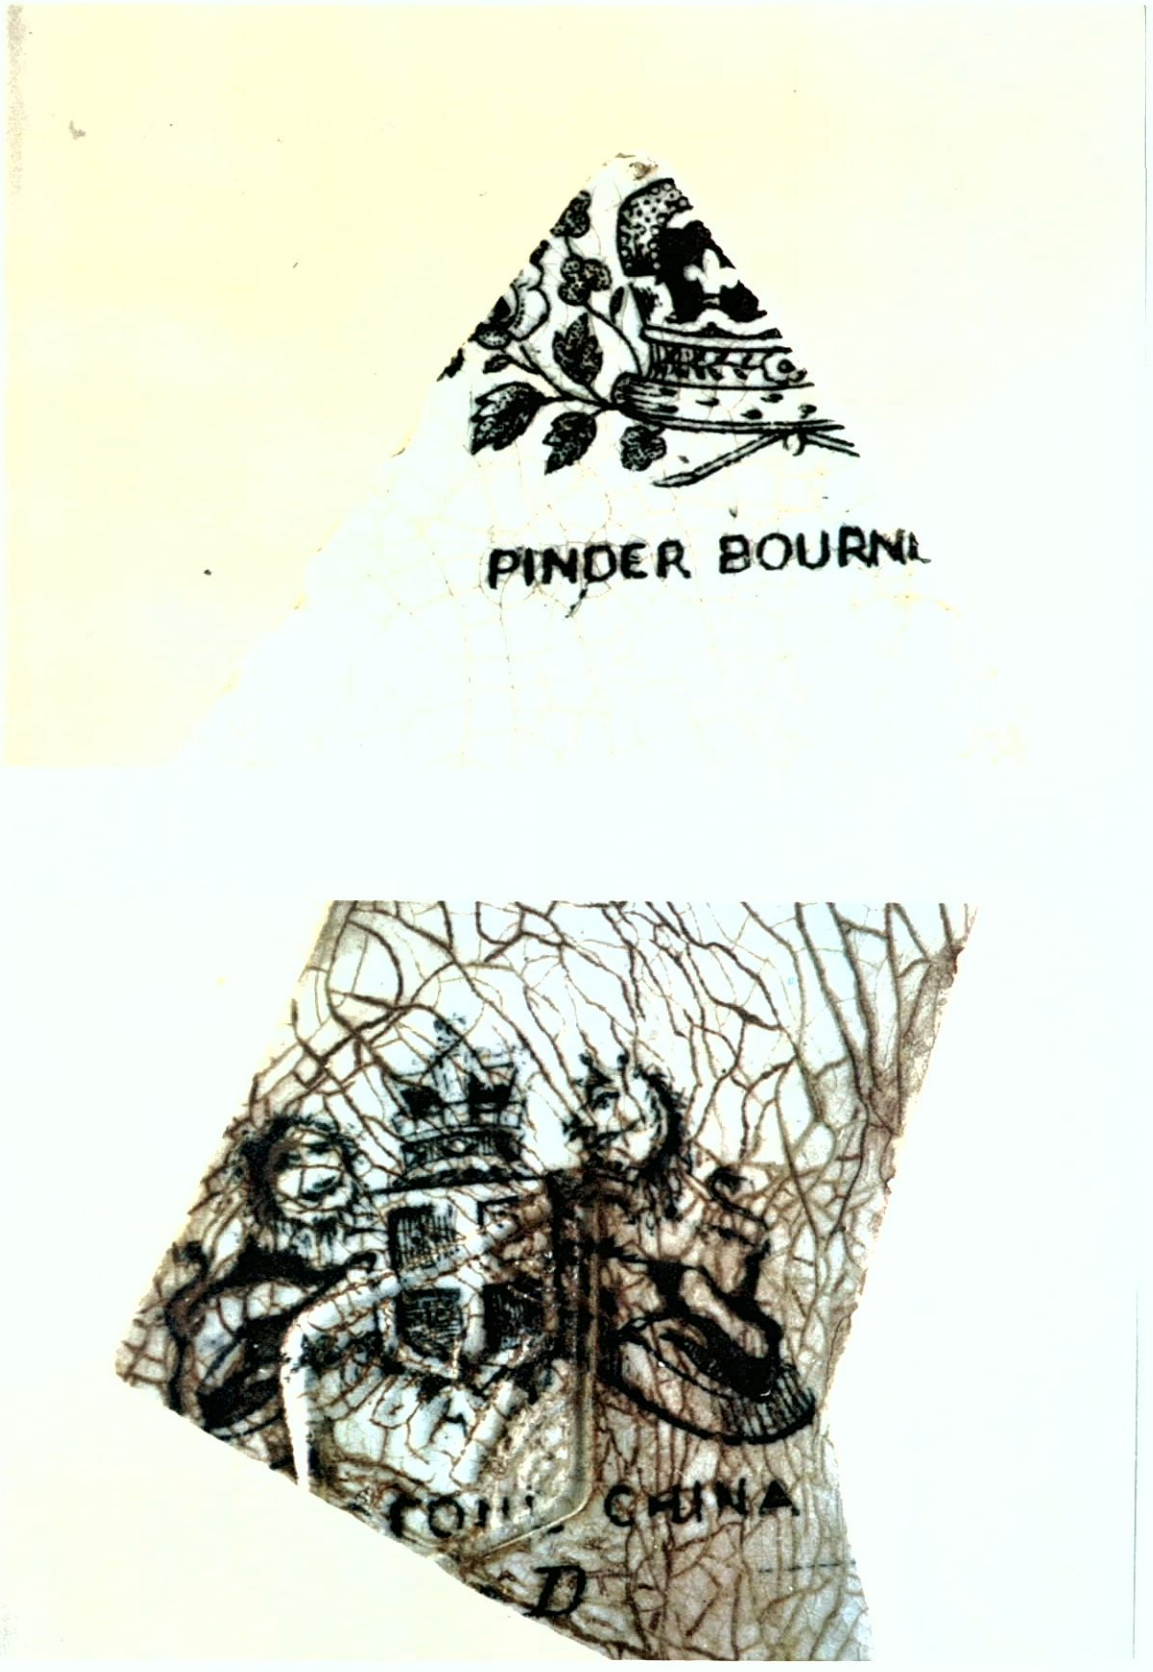

Figure 4.21. Two close up photos of decorated and datable transfer printed ironstone sherds recovered from the interior fill of the cistern within Lot 58 (Feature 800.04, Component IIIb). The top sherd has a maker's mark of "PINDER BOURNE" beneath a crown which was initially manufactured ca. 1862. The bottom sherd has an impressed Registry mark together with a black printed maker's mark of a lion and unicorn and "IRONSTONE CHINA" below, which was manufactured between 1846 and 1867.

Grossman and Associates, Inc. 1995.

Figure 5.1. An example of an early patented vulcanized rubber button which was initially manufactured circa 1851, and stamped on the back with "N R Co. Goodyear's P=T 1851". This button was recovered from the interior fill of the small brick inlet drain (Feature 801, Component IIIa). This and contemporary artifacts recovered from the drain and cistern strongly suggest that the water control complex was in use by at least the decade prior to the Civil War.

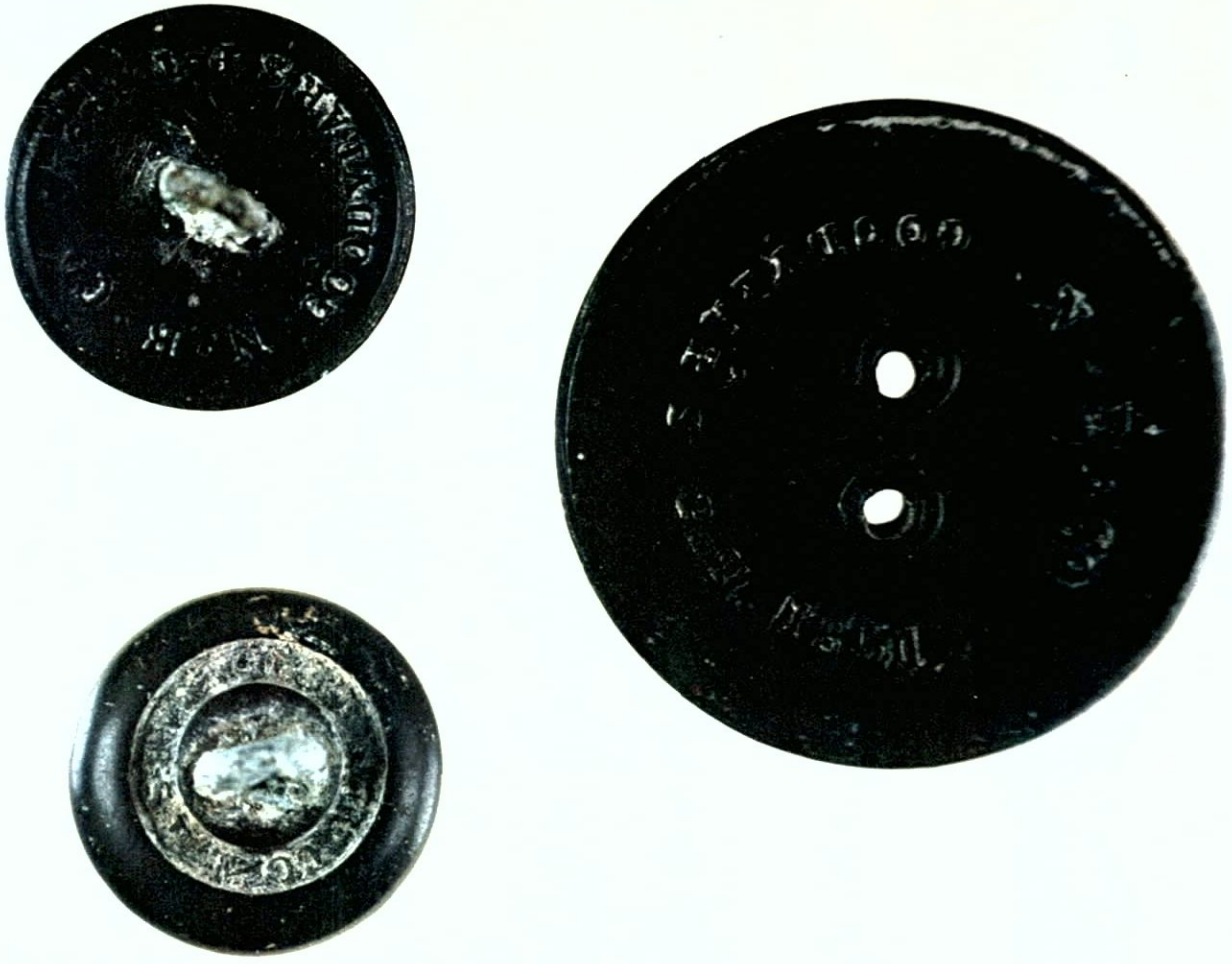

Figure 5.2. Three vulcanized rubber buttons stamped with 1851 Goodyear patent marks recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995.

Figure 5.3. Six carved and drilled bone buttons showing the stylistic and manufacturing range of variation of this material class, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

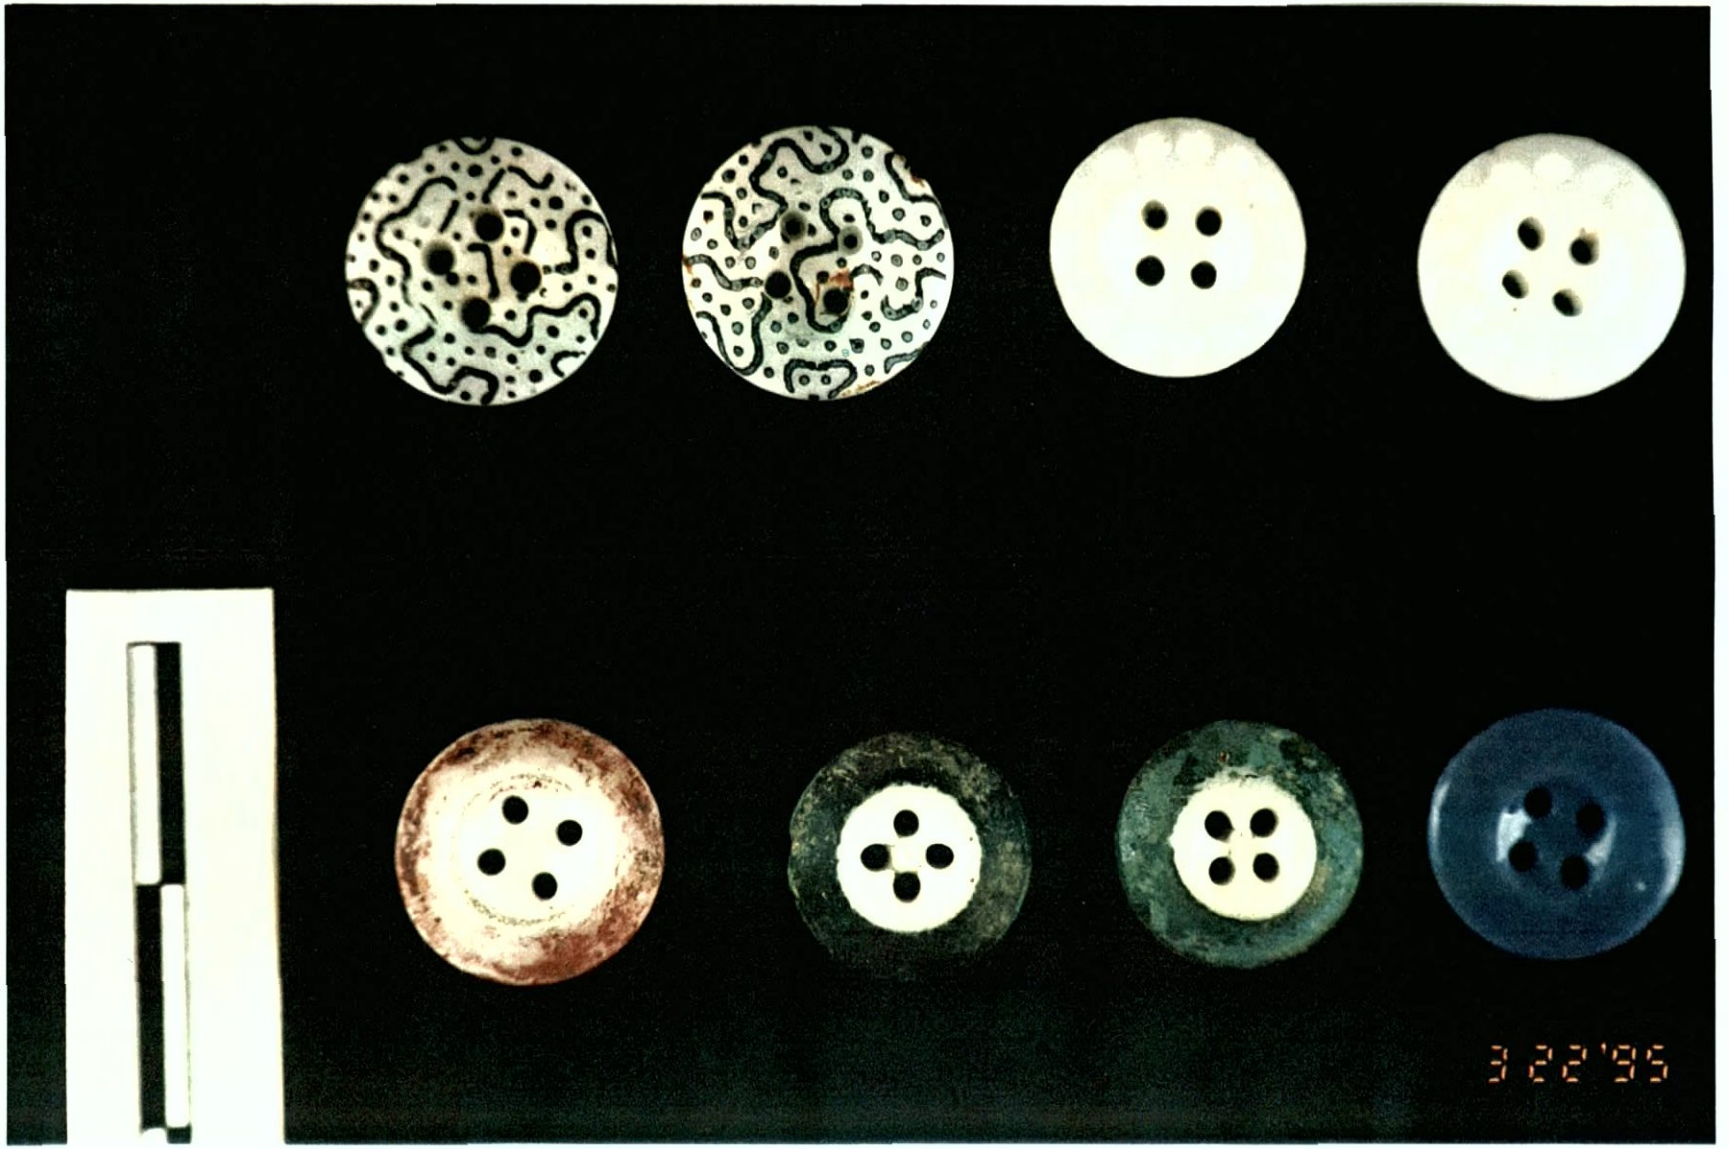

Figure 5.4. Eight decorated four-holed glass buttons recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

Figure 5.5. Five shell and one mother of pearl buttons recovered from Feature 800.04, Component IIIb showing the range of variation in size and workmanship of these Civil War era clothing related items.

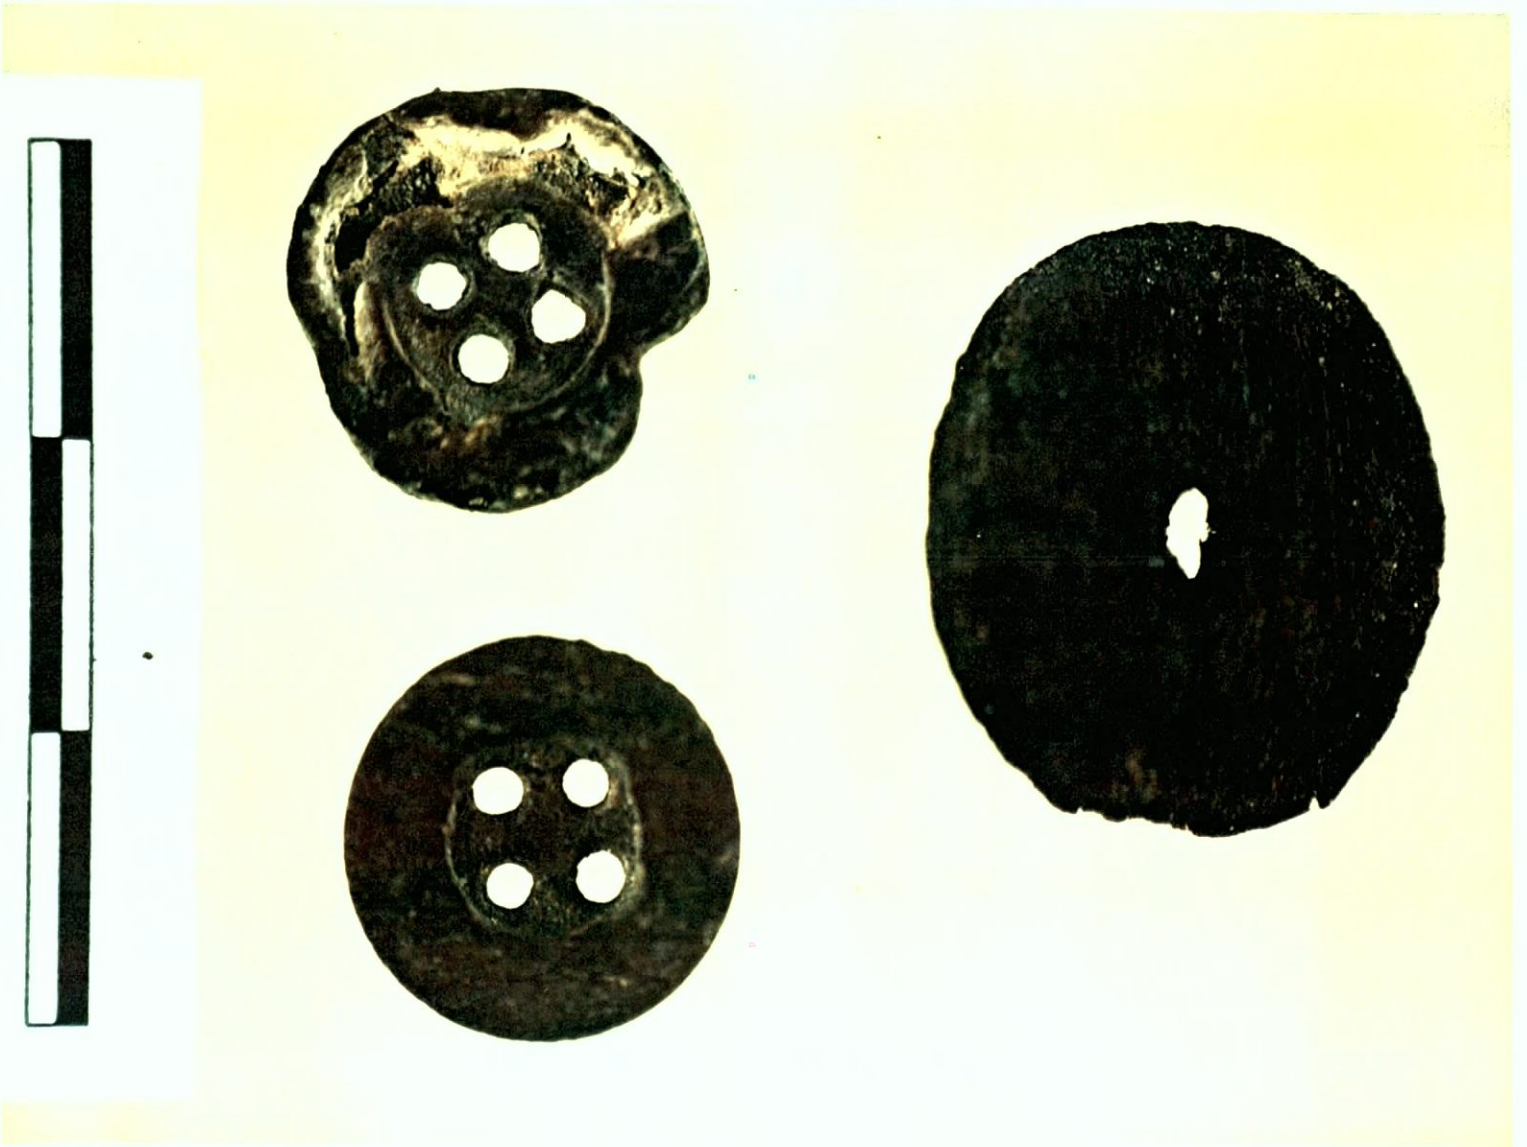

Figure 5.6. Three carved wooden buttons (2 four holed and 1 single holed) recovered from the Civil War era fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

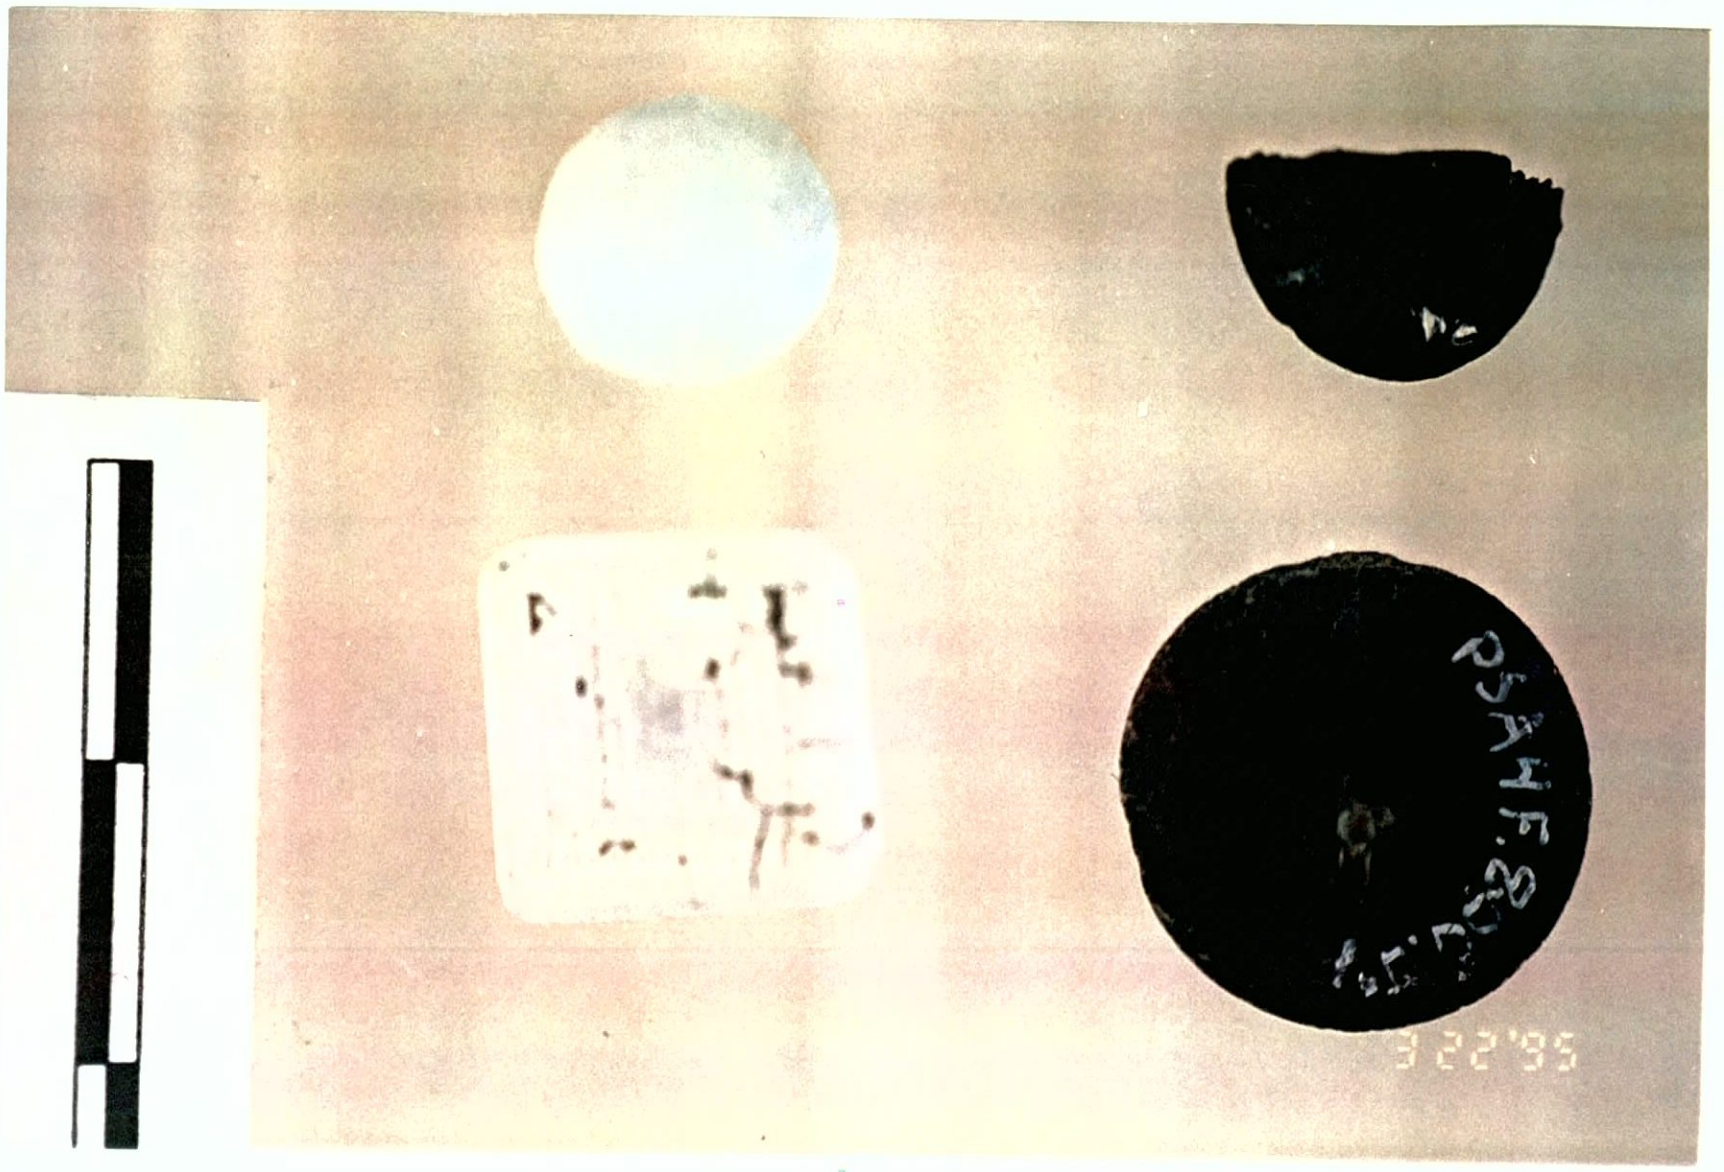

Figure 5.7. Four molded opaque white and black glass buttons recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

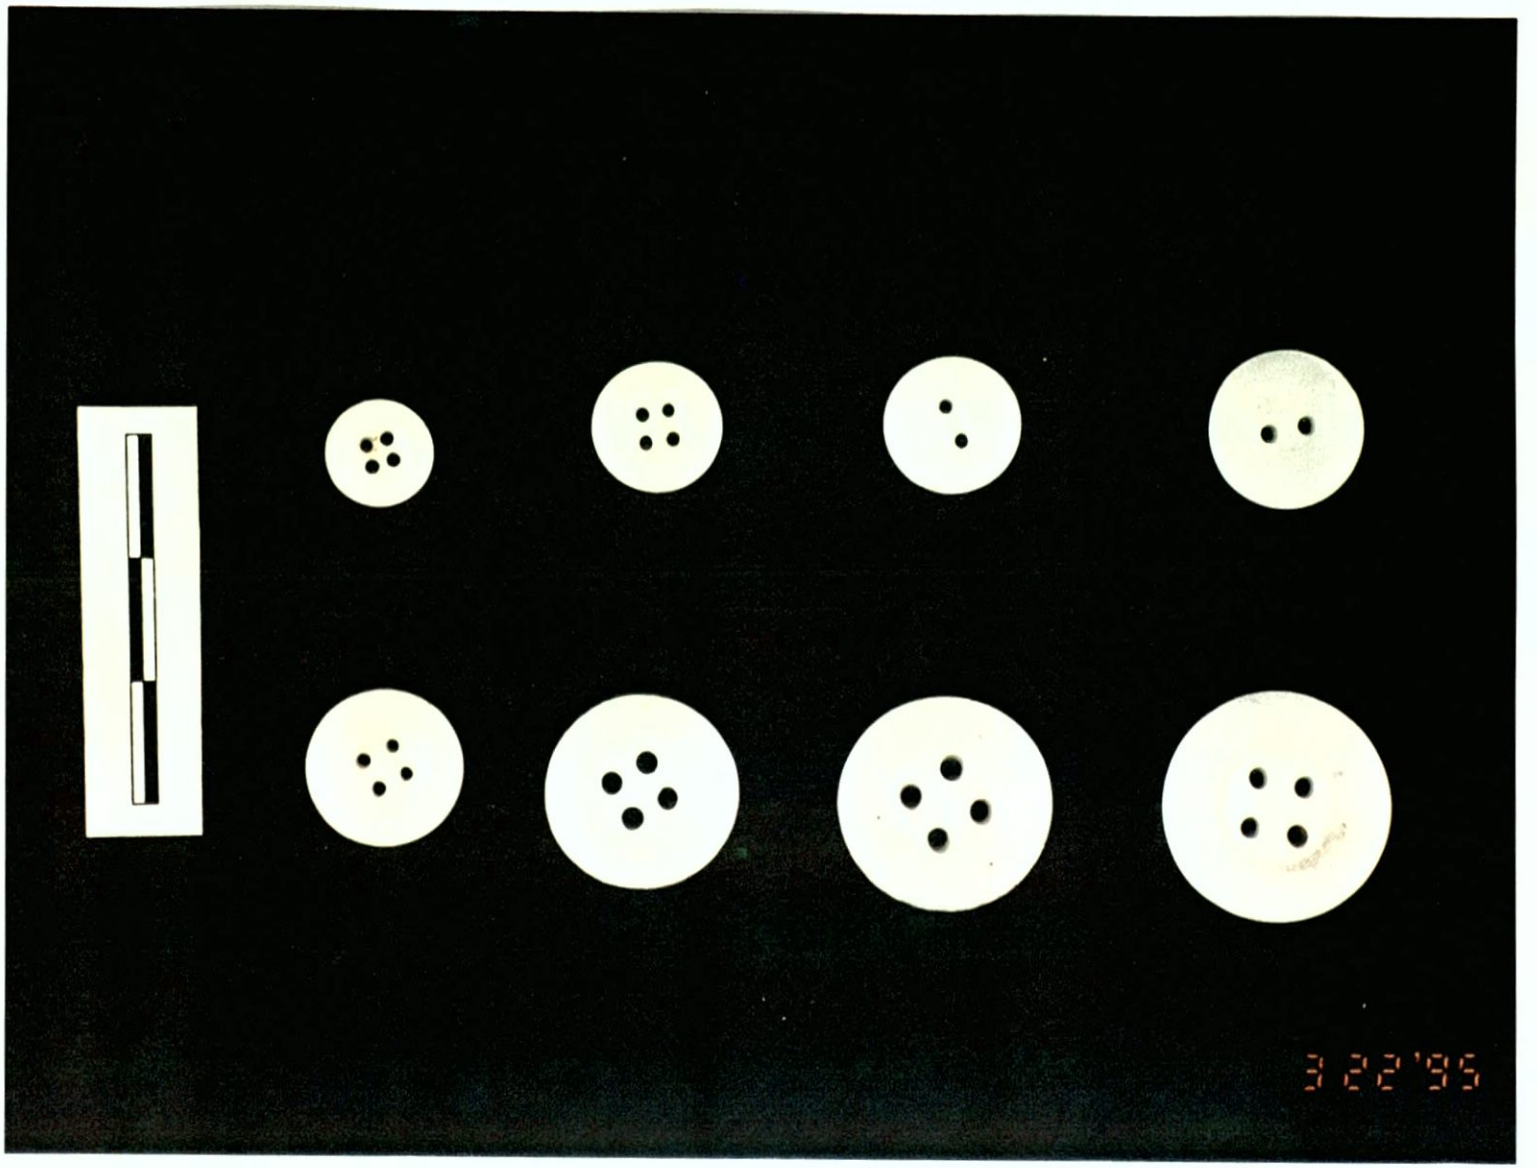

Figure 5.8. Composite photograph of eight machine molded milk glass buttons recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb) showing the range of variation in size and hole manufacture for these contemporaneous and associated examples.

Grossman and Associates, Inc. 1995

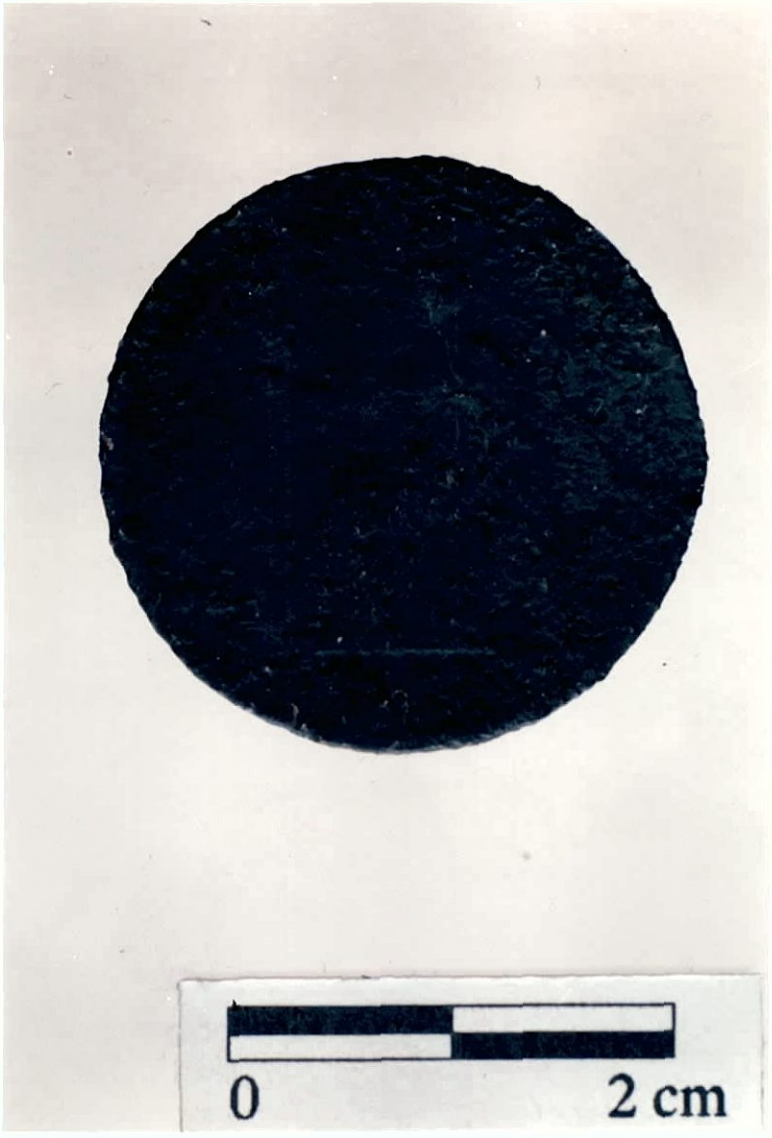

Figure 6.1. Split beam axial macro photo taken with polarized light to document the heavily corroded surface remnant of a seated liberty representing a "Washington and Independence" penny dating to 1783. Though pre-dating the actual construction of the drain system by half a century, this coin, recovered from the builder's trench of the small brick inlet drain leading into the stone cistern, was consistent with the otherwise exclusive recovery of only early 19th century artifacts from historic features belonging to the initial construction phase of the drain and cistern complex (Feature 8.6, Component I).

Figure 6.2. Close up split beam polarized macro photo of an early dutch coin with "Nederl Indie 1823" on one side, and the crown for the royal house of Holland on the opposite side. This early pre Civil War coin was recovered from the interior matrix of the rectangular stone foundation wall surrounding the cistern, which initially suggested that the building may have pre dated the Civil War. However, detailed stratigraphic excavation documented that the building wall in fact cut through and destroyed the small brick inlet drain to the system, and therefore post dated the cistern and the Civil War.

Grossman and Associates, Inc. 1995

Figure 6.3. Close up photo of two electrolytically cleaned and stabilized Indian head pennies dating to 1859 and 1860 respectively, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995.

Figure 6.4. Front and back views of two Liberty head pennies dating to 1851 and 1849 respectively, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995.

Figure 6.5. Front and back views of two Civil War era tokens. The token on the left is imprinted with "LIBERTY AND NO SLAVERY 1863". The token on the right is imprinted with "UNION FLOUR" which was minted for "WING & CO. ALBANY, NY". Both were recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995.

Figure 6.6. Front and back views of two Civil War era tokens recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb). The example on the left is marked with "J SMITH DODGE, DENTIST, 407 FOURTH St" on one side and "TEETH THREE DOLLARS EACH, PLATE EXTRA". The example on the right is impressed with "ARMY NAVY 1863".

Grossman and Associates, Inc. 1995.

Figure 6.7. Front view of two Civil War era Indian head pennies recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb) dating to 1863 and 1864 respectively.

Grossman and Associates, Inc. 1995.

Figure 6.8. Close up view of an 1916 Lincoln head penny recovered from the early 20th century intrusive pit, Feature 802 (Component Va), which was stratigraphically superimposed on and cut through the post destruction fill covering the stone cistern in Lot 58

Figure 7.1. Composite view of 9 partially complete, molded kaolin clay pipe bowls found in association with the nearly complete, glazed porcelain pipe bowl (right), all recovered from the Civil War era (ca. 1850 to 1867) fill of the cobble cistern within Lot 58 (Feature 800.04, Component IIIb).

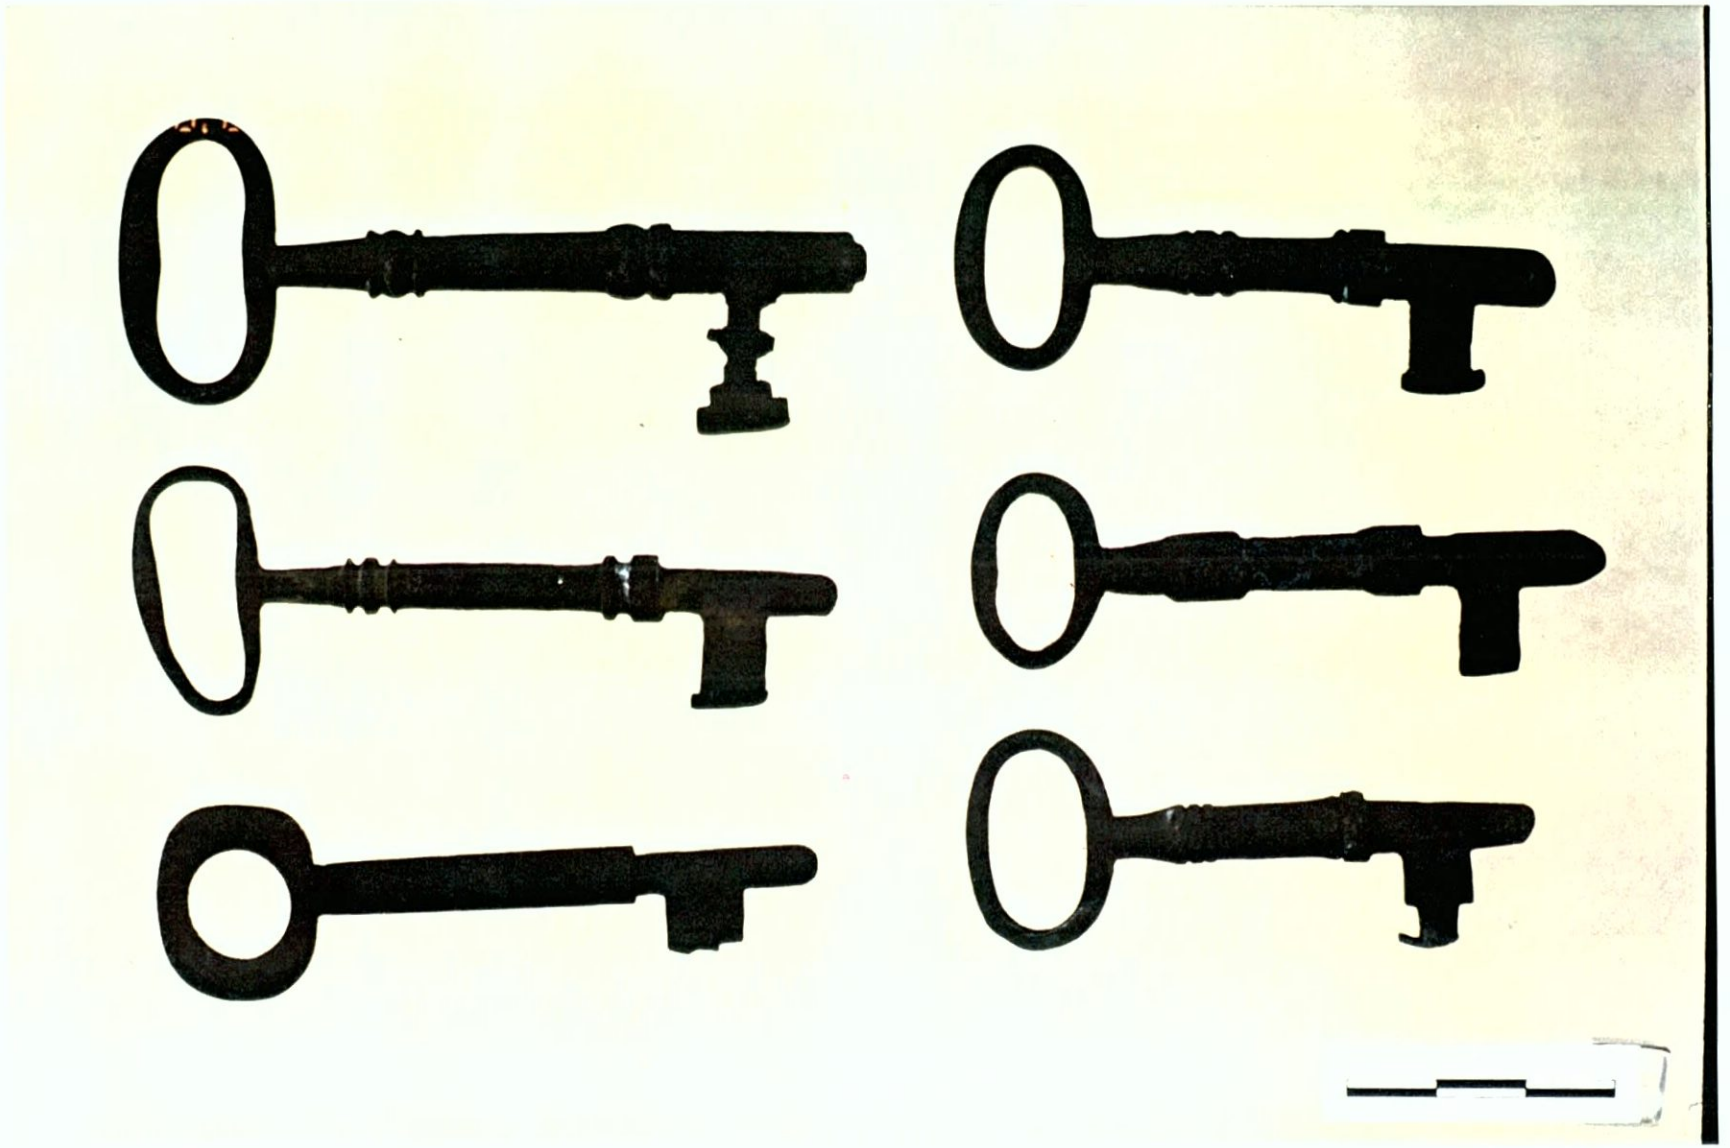

Figure 7.2. Profile photo of 6 historic copper alloy keys showing variations in the bowl shape, shank decoration, and notches on the blade edges, which were recovered as a group from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Figure 7.3. Profile view of two Civil War era wooden thread spools recovered from the waterlogged fill of the stone cistern in Lot 58 (Feature 800.04, Component IIIb).

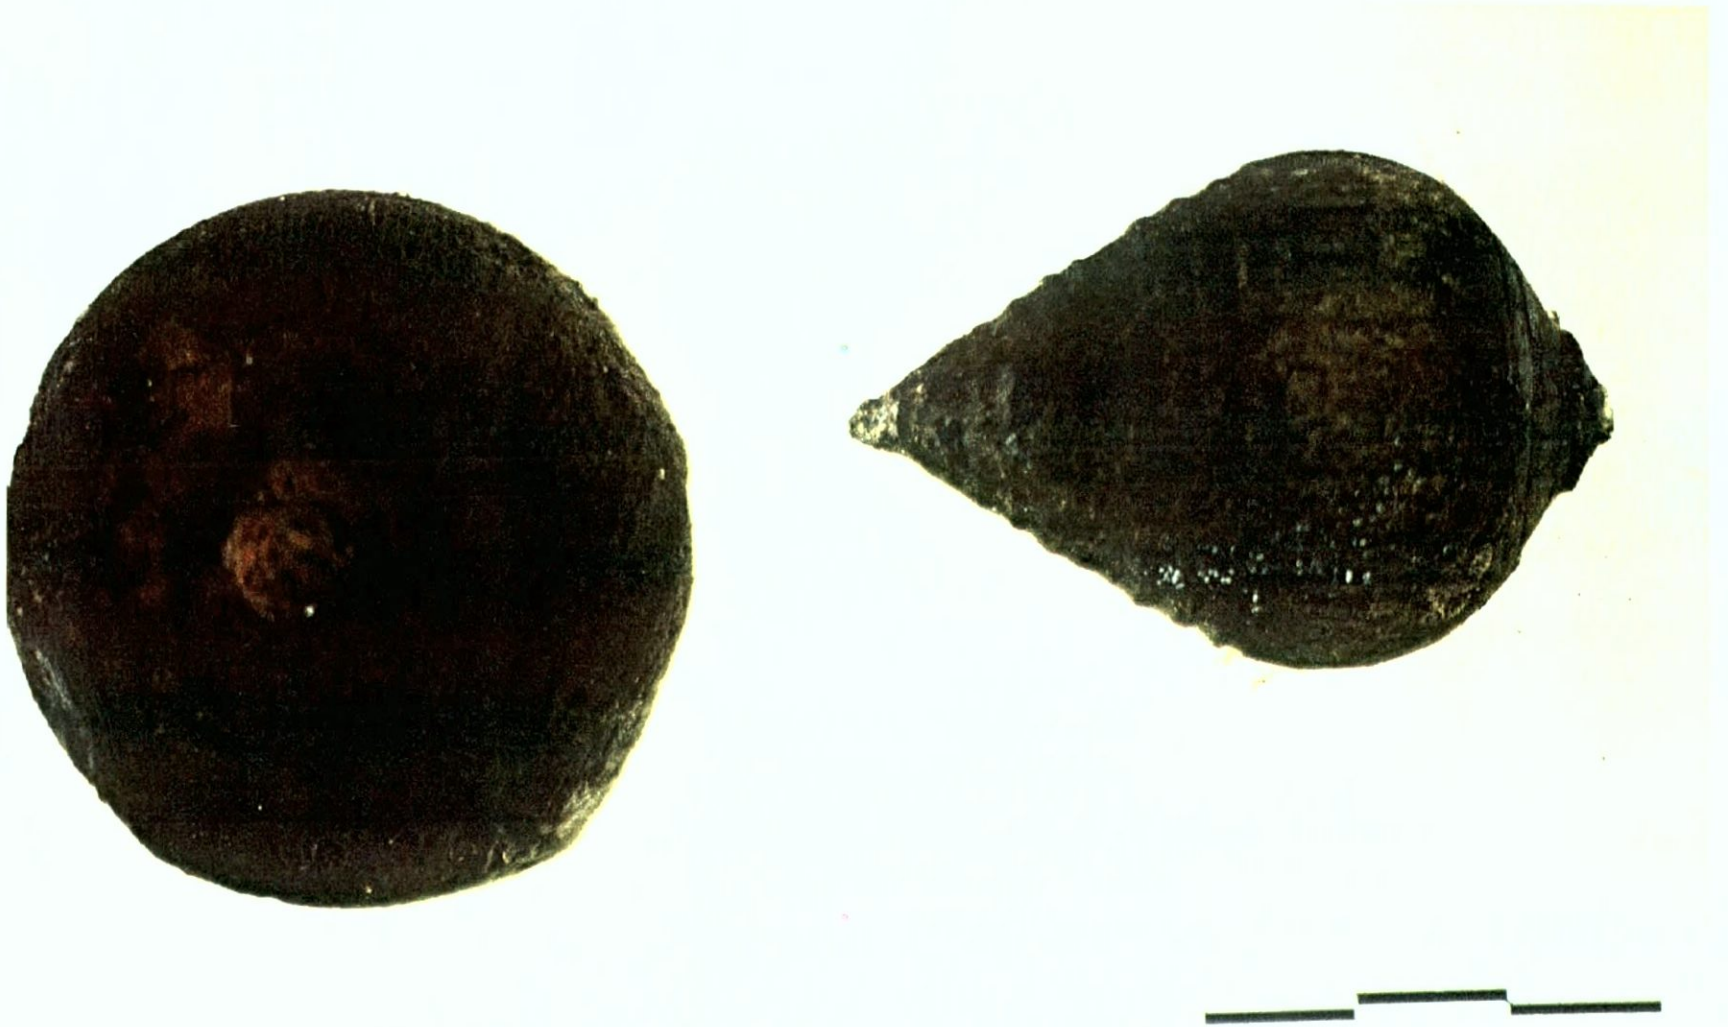

Figure 7.4. Profile views of two historic lathe turned wooden tops recovered from the waterlogged interior fill of the stone cistern in Lot 58 (Feature 800.04, Component IIIb). Both tops display concentric bands of adjacent grooves down to the revolving point and are tipped with a metal finial.

Figure 7.5. Extreme close up of two preserved Civil War era match sticks with burned tips, recovered from the waterlogged interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb). The projected date range based on associated diagnostic artifacts is between ca. 1850 and 1867.

Grossman and Associates, Inc. 1995

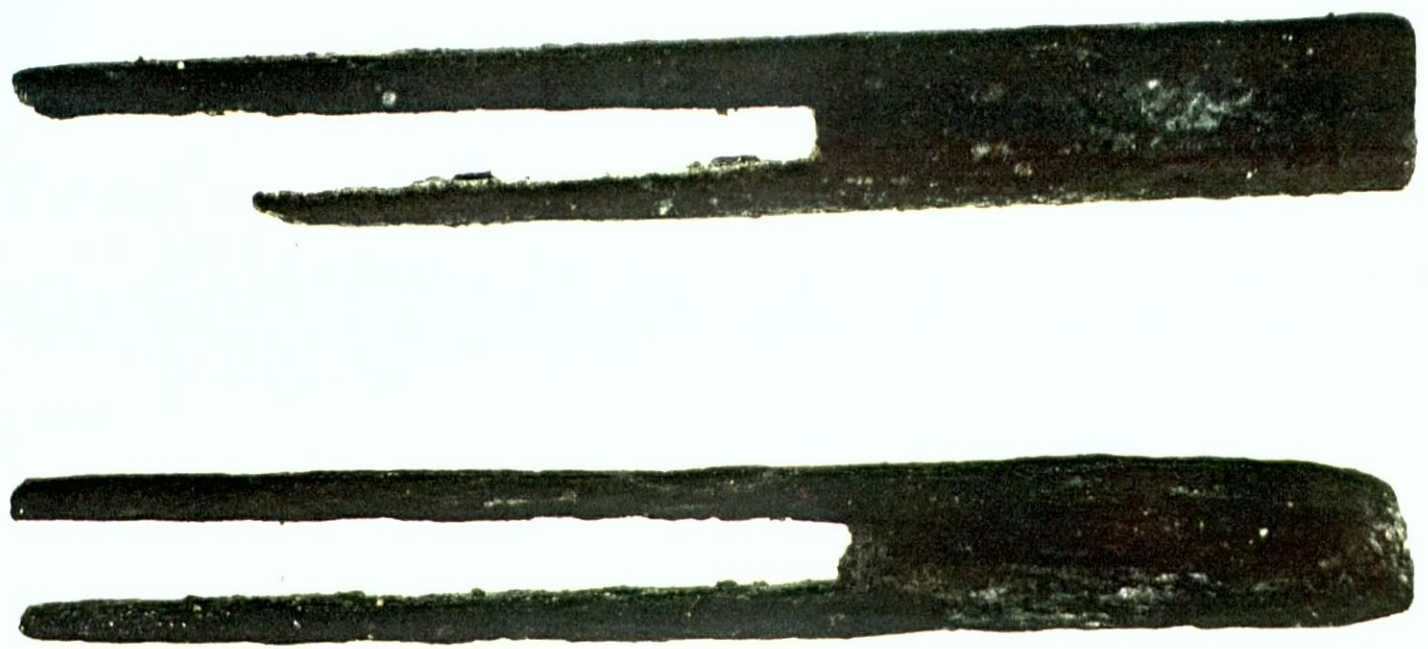

Figure 7. 6. Close up view of two preserved Civil War era wooden clothespins measuring 5 inches by 3/4 inch in diameter, recovered from the waterlogged interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb), with a projected date range based on associated diagnostic artifacts of between ca. 1850 and 1867.

Grossman and Associates, Inc. 1995

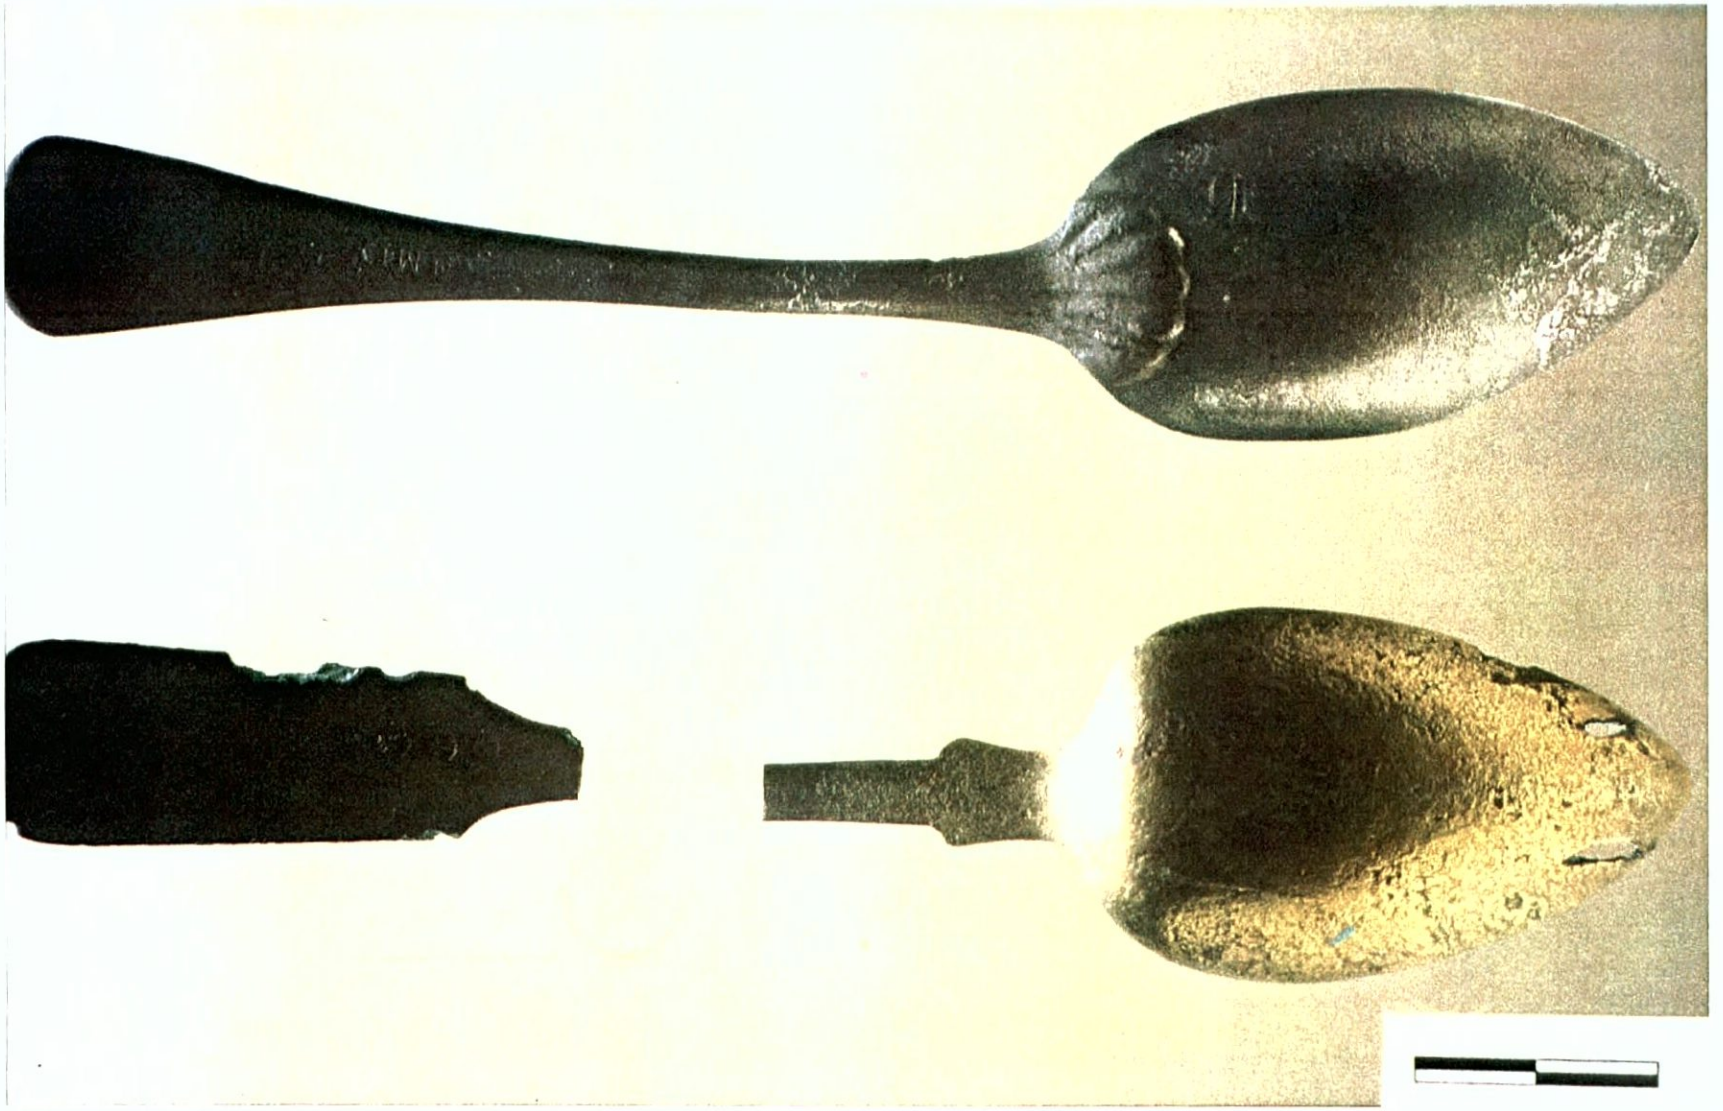

Figure 7.7. Close up photo of two tablespoons, one silver plated and one gold plated, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb), with a projected date range based on associated diagnostic artifacts of between ca. 1850 and 1867.

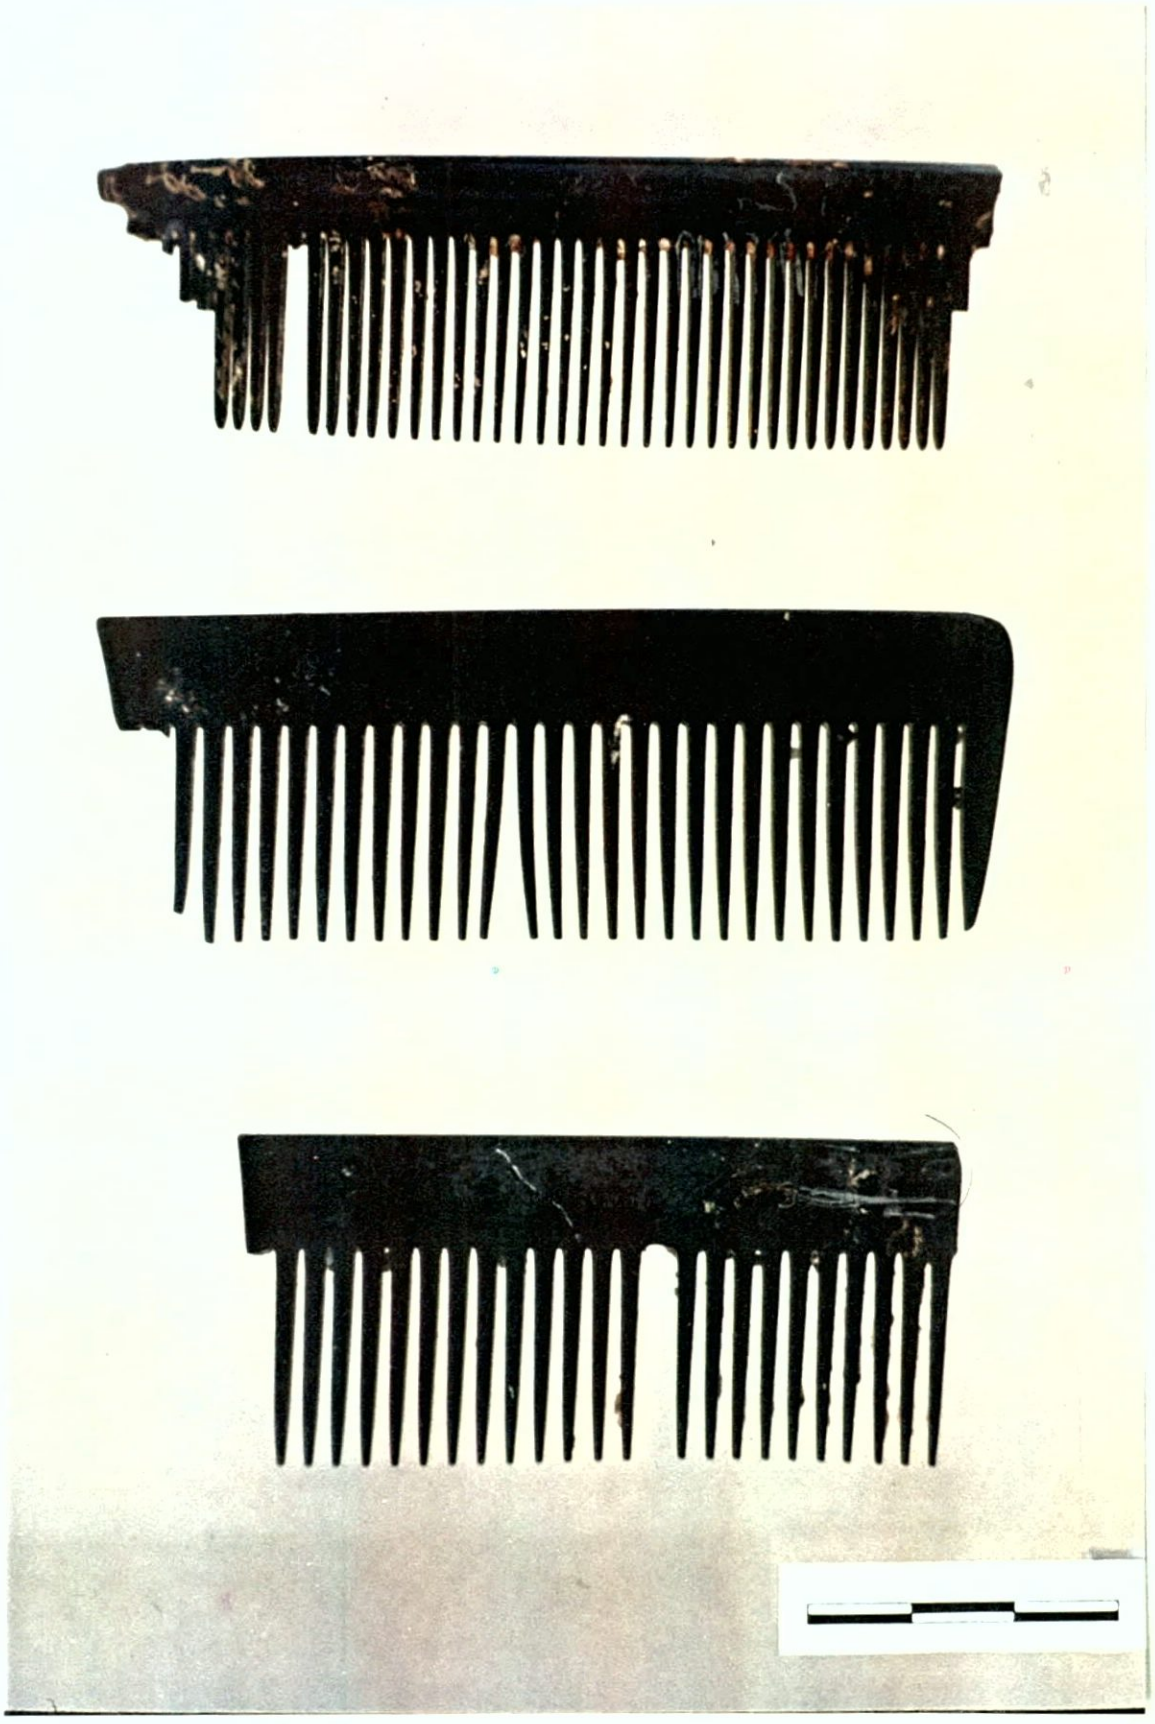

Figure 7.8. Close up photo of three vulcanized rubber comb segments stamped with the Goodyear patent date of 1851, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

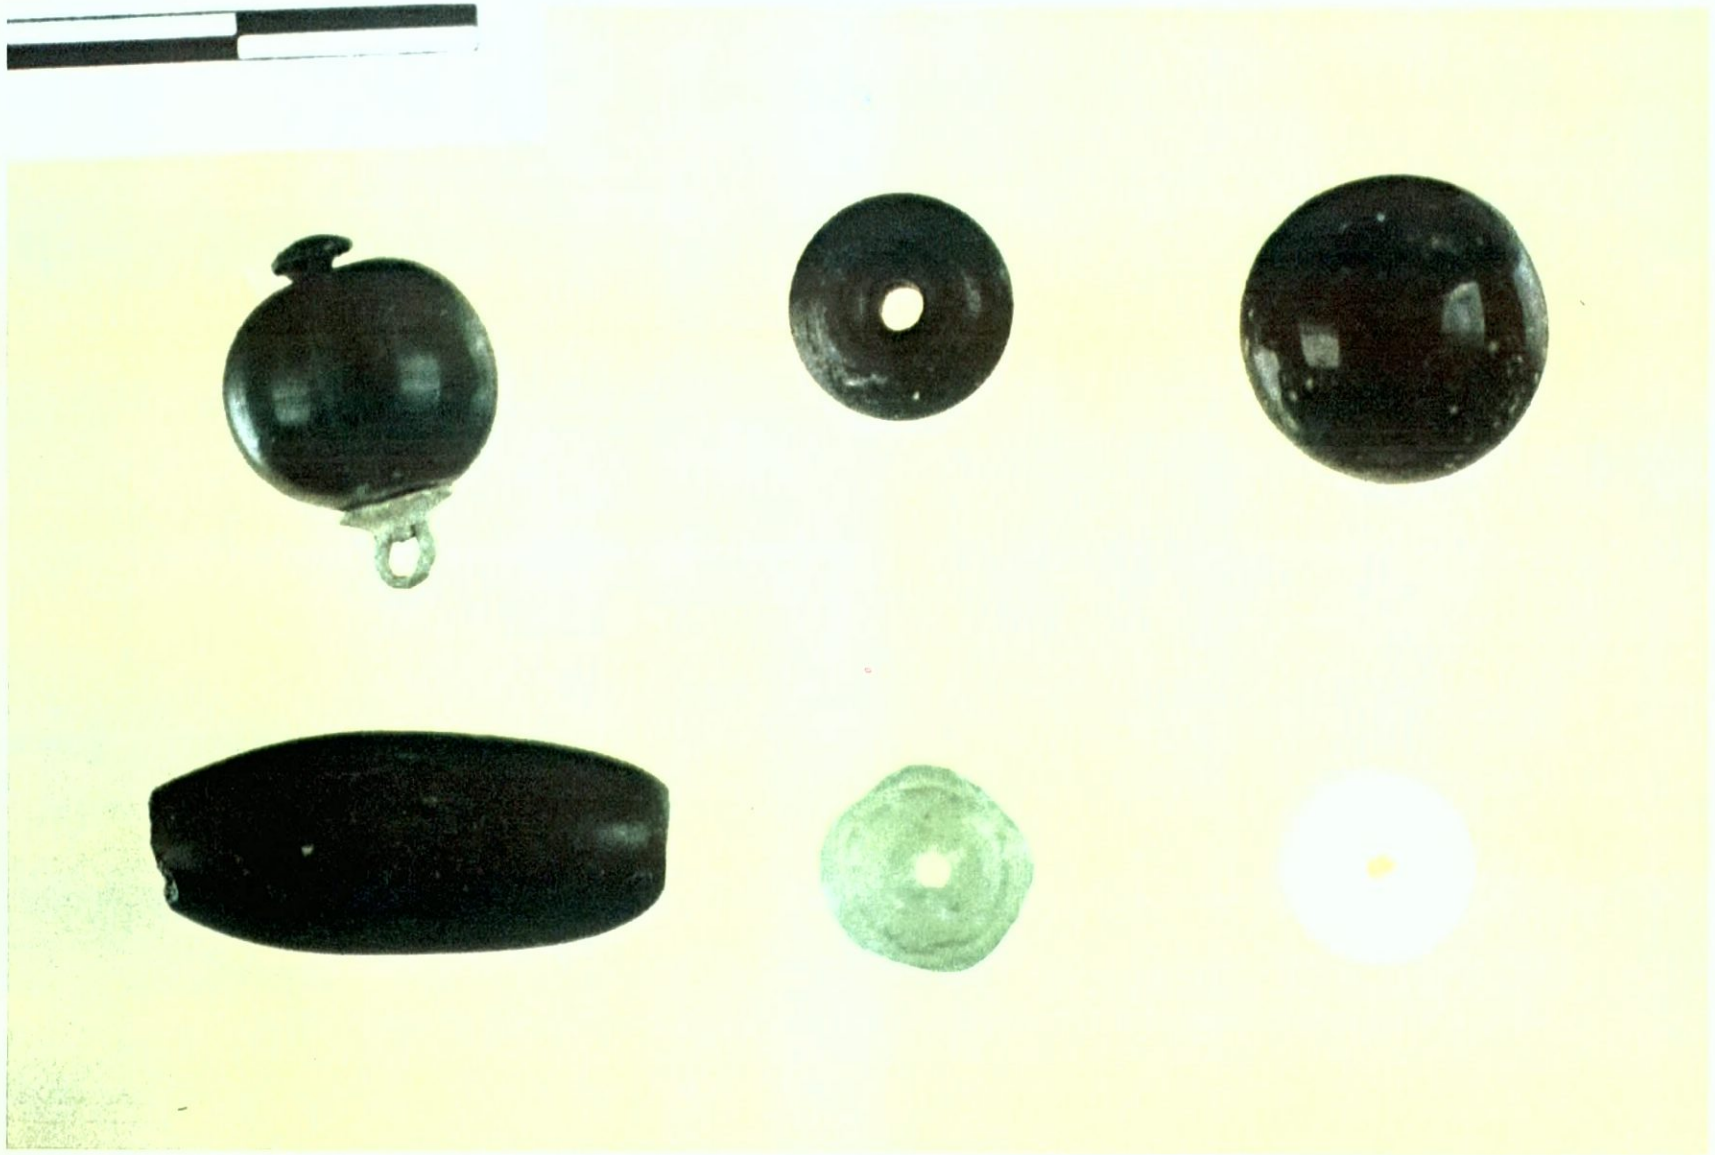

Figure 7.9. Composite view of six Civil War era glass beads recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Figure 7.10. Extreme close up of two carved wooden beads, measuring between 1/4 to 1/2 inch in diameter recovered from the water-logged interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

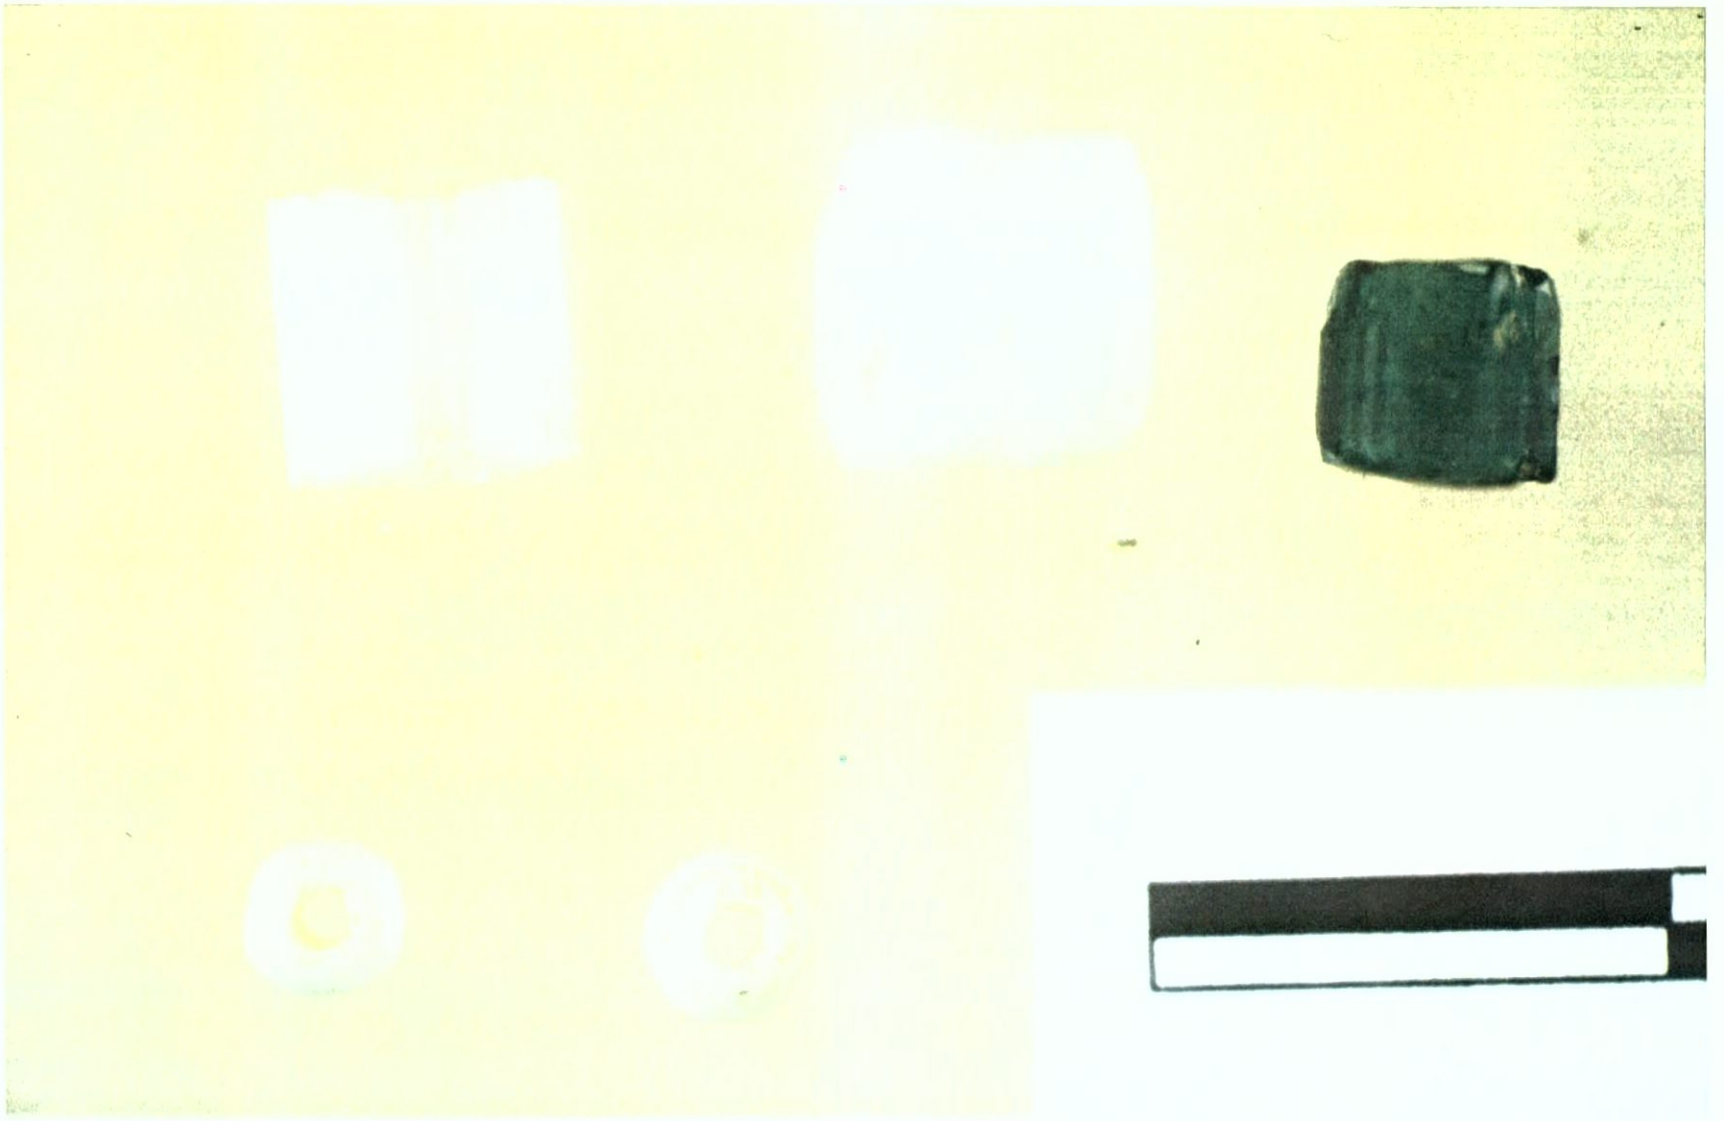

Figure 7.11. Extreme close up of five historic glass beads recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb). The 3 beads on top are each faceted and appear to have been manufactured from segments of long blown glass tubes. The 2 specimens on the bottom represent classic historic "seed" beads which were in circulation as trade items and elements of personal adornment from the 17th to the 19th century in the Northeast.

Figure 7.12. Close up photo of two electrolytically cleaned and stabilized pewter toy artifacts recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb). The toy cup at the top, measuring less than 1 inch in diameter, is decorated with embossed floral motifs. The toy wing below appears to represent an angel's wing from a small figurine.

Grossman and Associates, Inc. 1995

Figure 7.13. Profile of child's doll house porcelain tea pot which survived intact except for the broken spout, recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

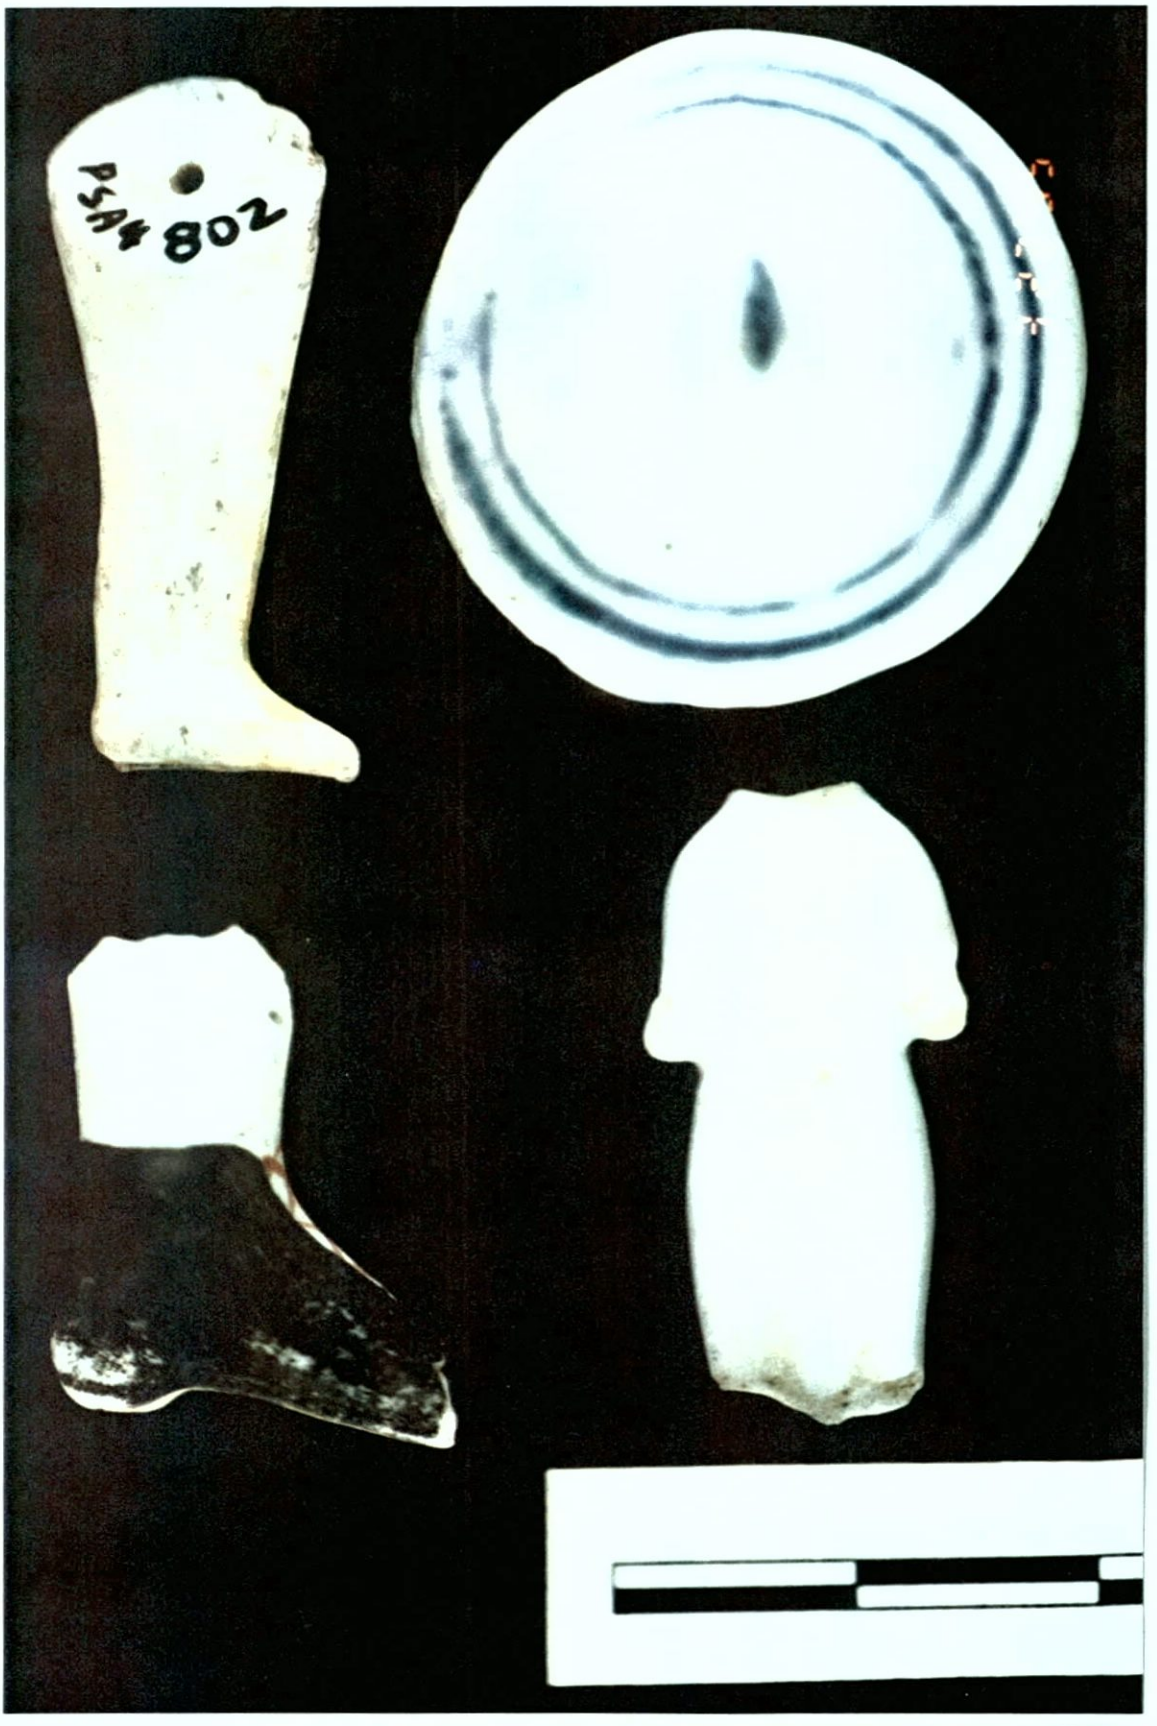

Figure 7.14. Close up photo of children's porcelain miniature doll parts, including a moveable leg (upper left), a painted shoe (lower left), a partially complete human torso (lower right), and a doll sized tea pot lid (upper right), recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

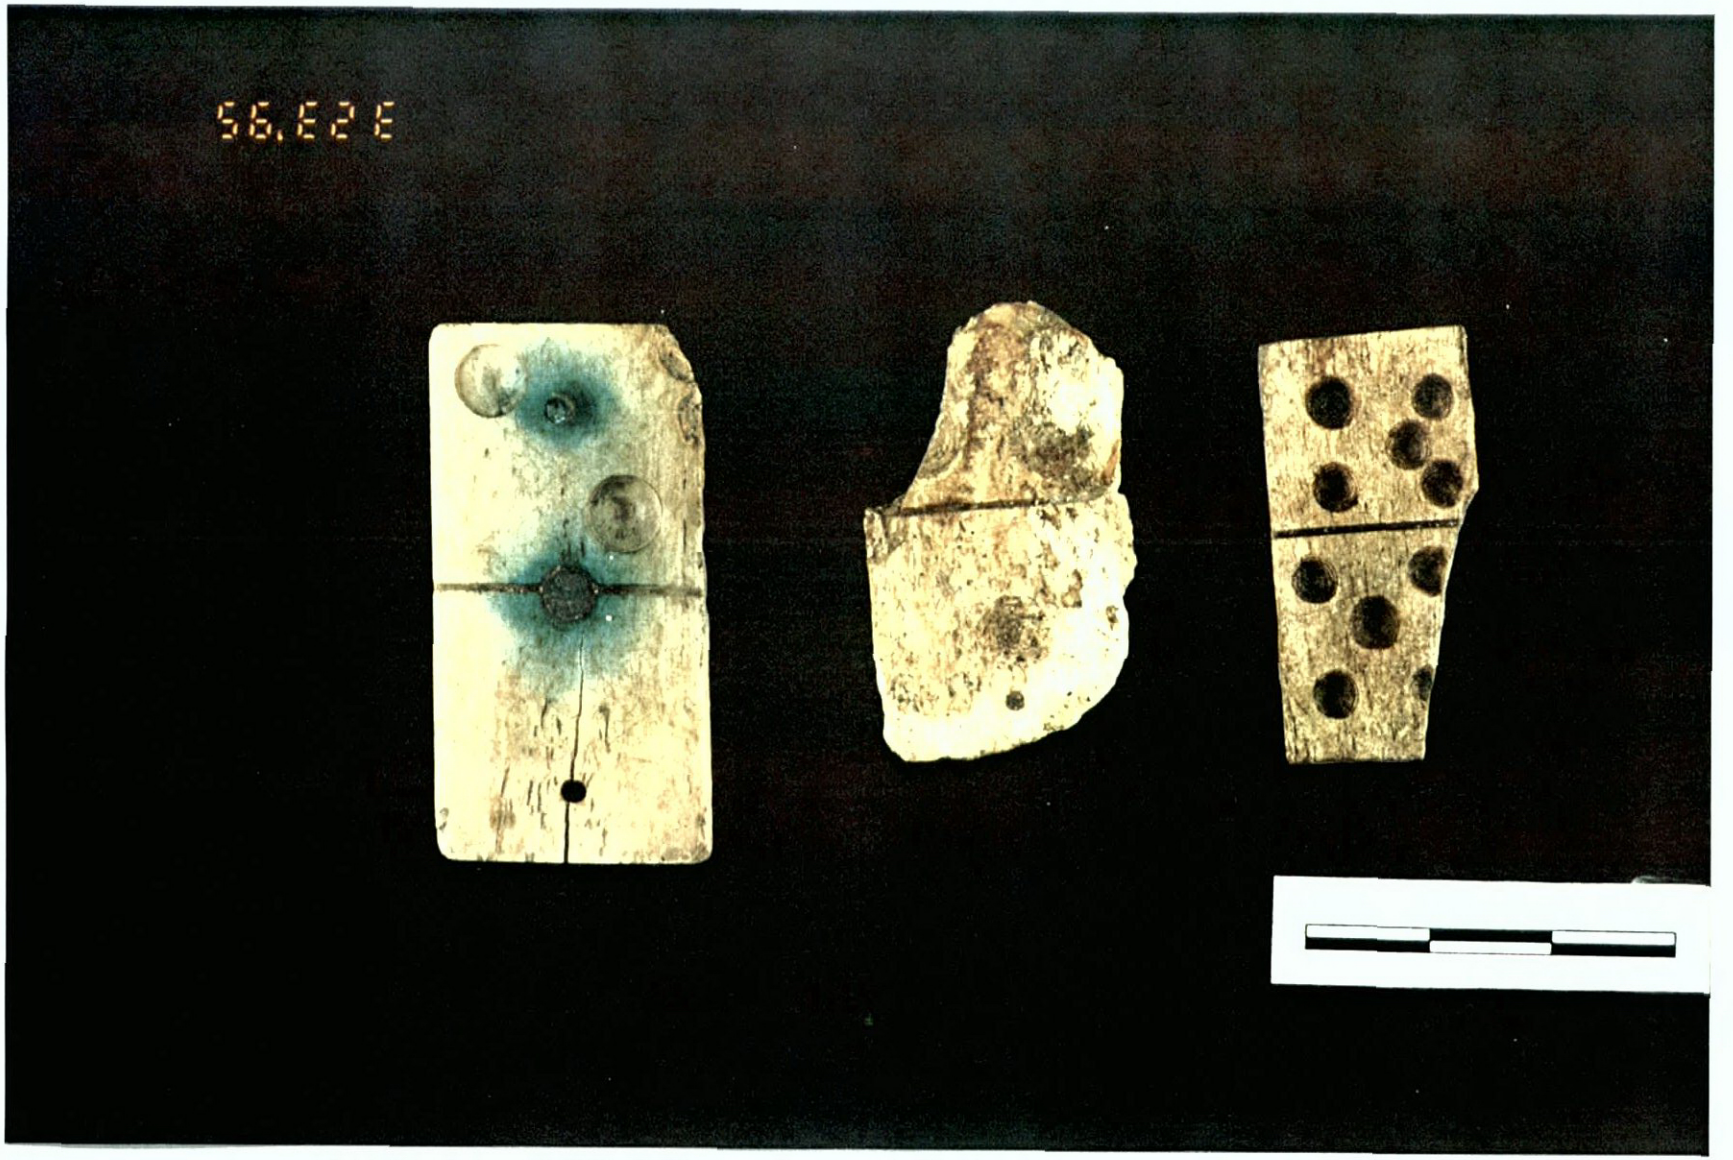

Figure 7.15. Three partially preserved historic Civil War era wood/ivory/bone domino tile gaming pieces recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.03 and 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

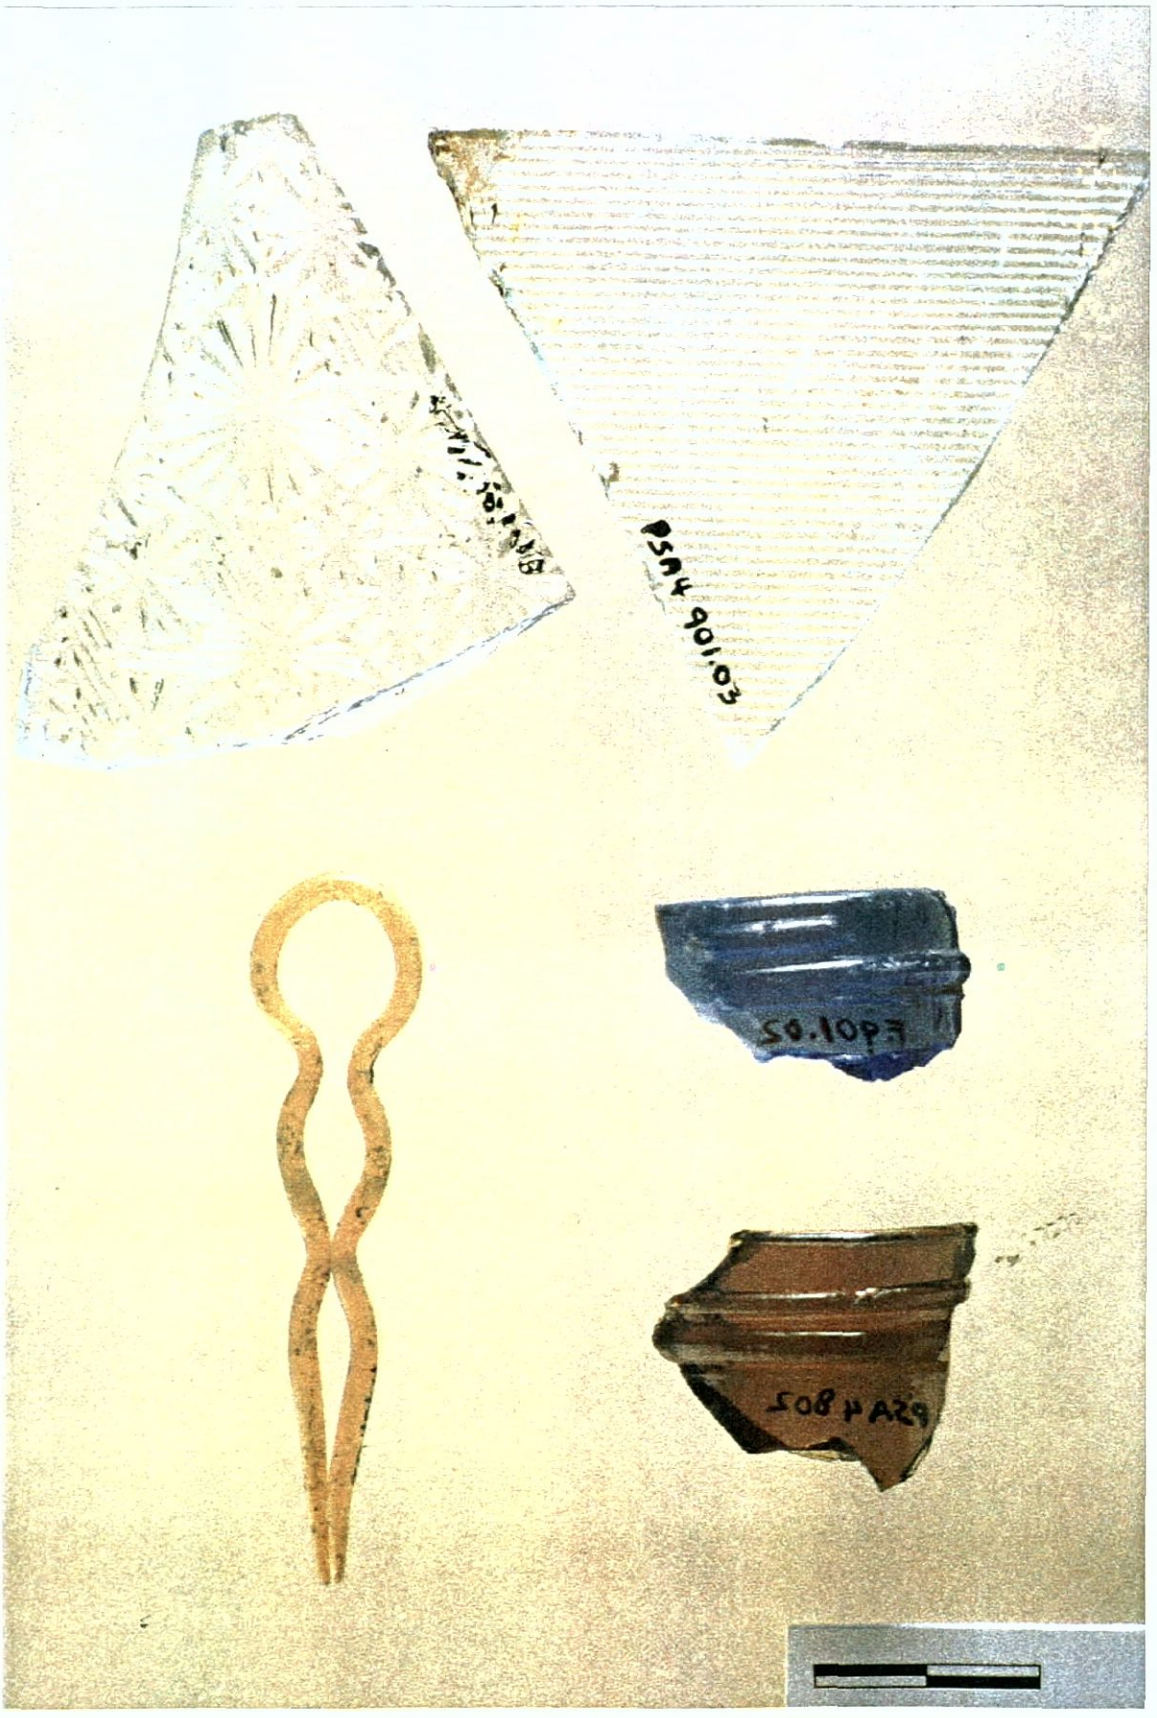

Figure 7.16. Close up view of continuous thread screw top bottle finish fragments (post 1924), safety glass fragments (20th century), and a molded plastic curler pin (post 1930), recovered from the intrusive 20th century refuse pit in Lot 58 (Feature 802, Component Va), and from the post destruction fill of the rectangular brick and iron 20th century privy found at the rear of Lot 59 (Feature 901.02, Component Vb).

Grossman and Associates, Inc. 1995

Figure 7.17. Close up view of historic Civil War era marbles, hand painted with polychrome floral and geometric motifs all recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

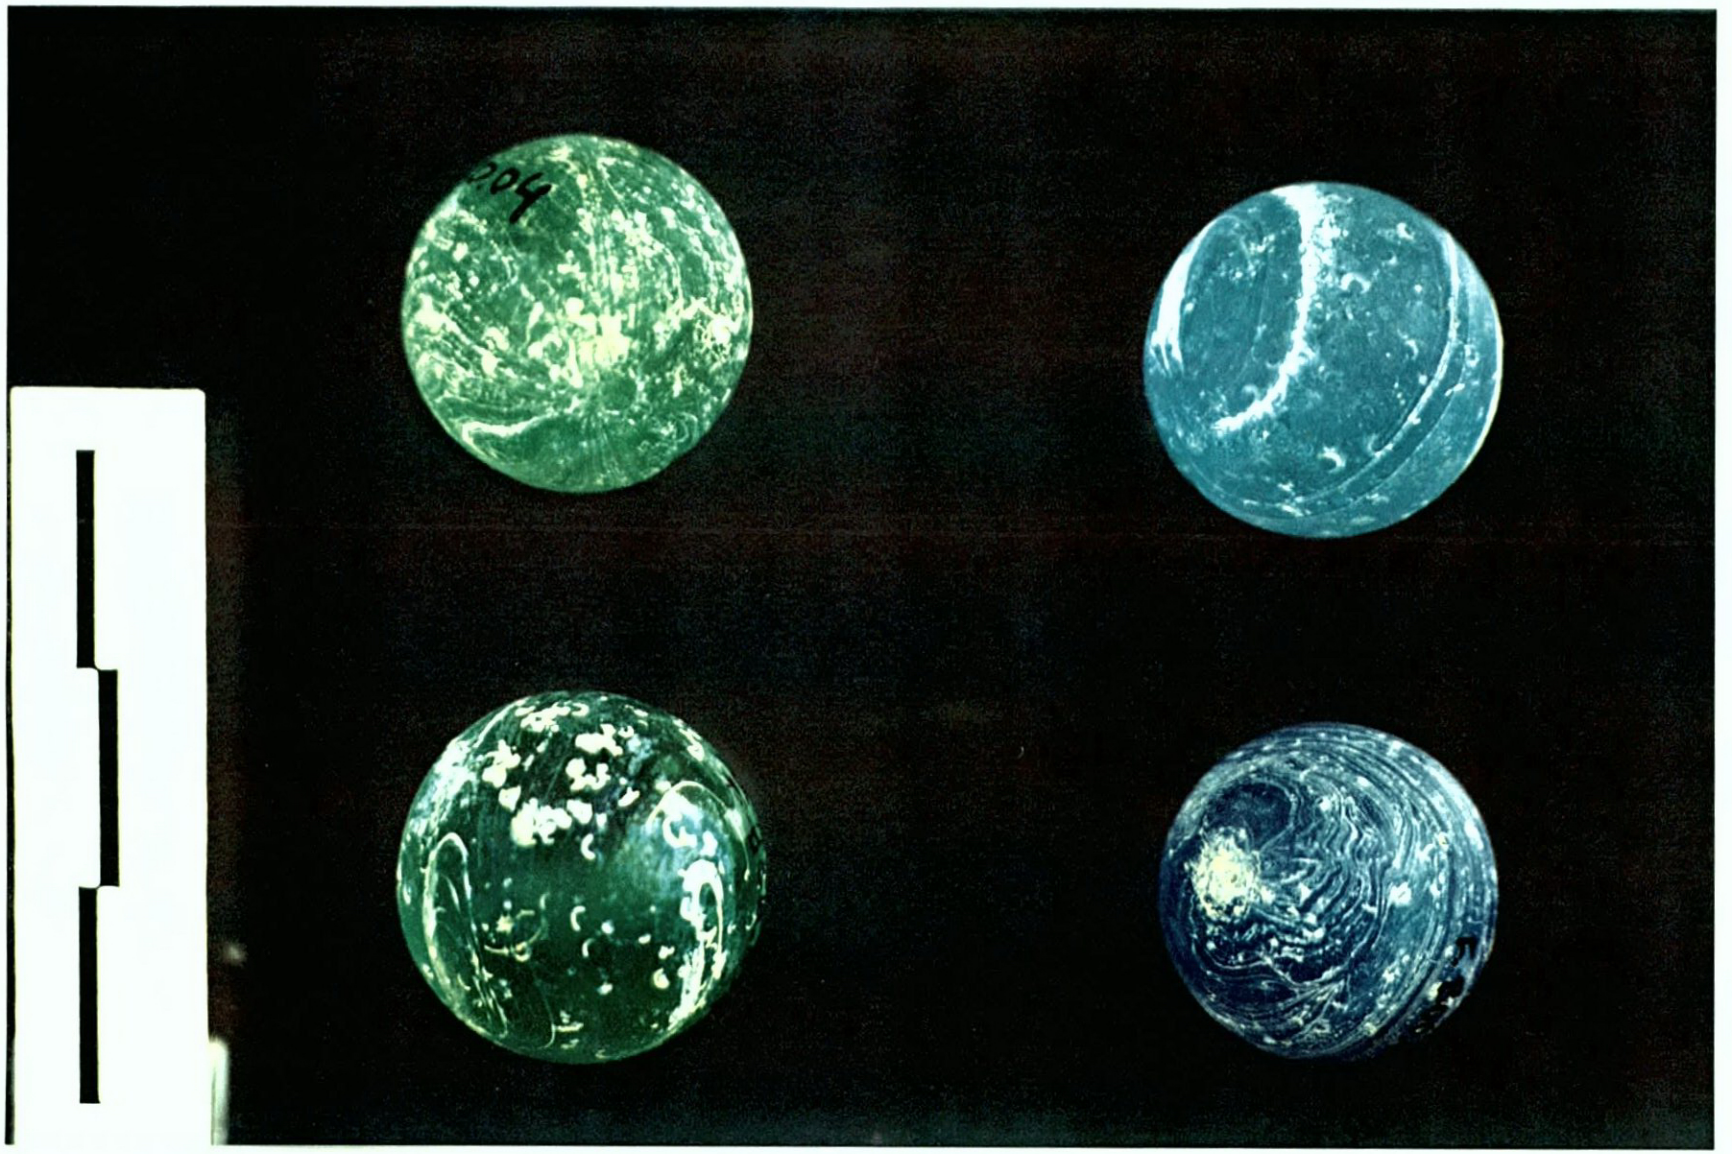

Figure 7.18: Close up view of opaque, green and blue swirled, Civil War era glass marbles recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

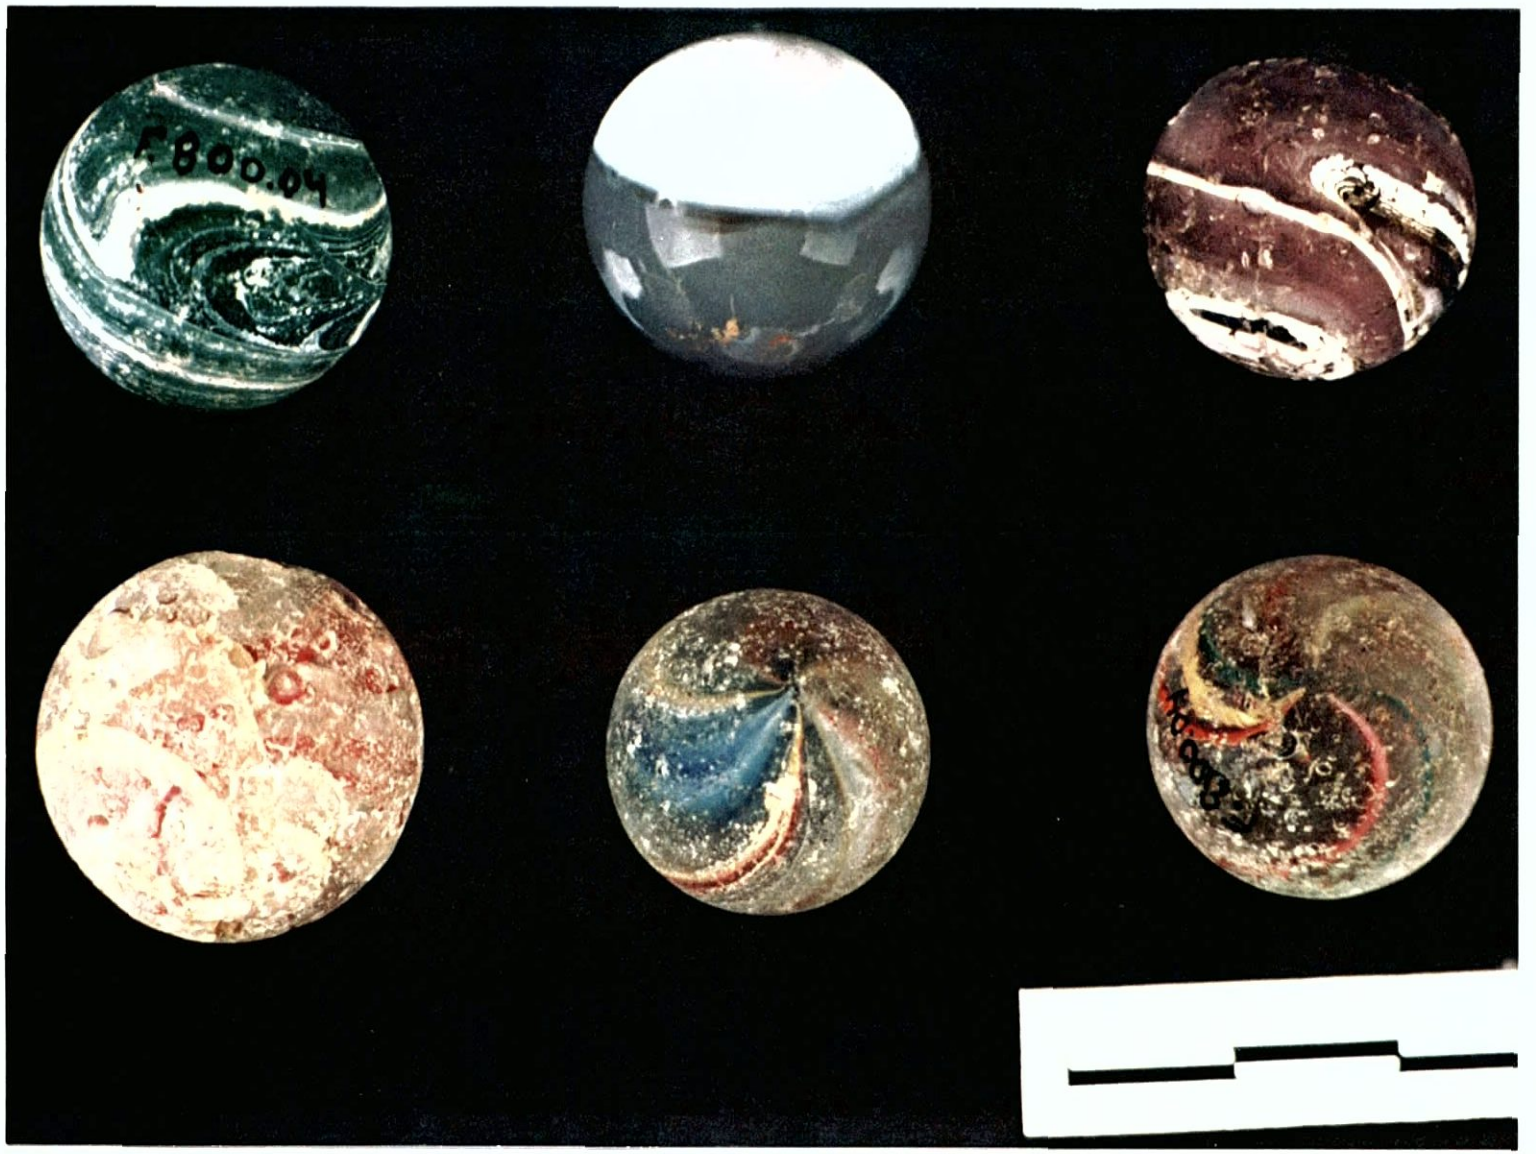

Figure 7.19: Close up view of six translucent glass marbles decorated with red, blue, pink, grey, white, and green interior swirls, all recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Grossman and Associates, Inc. 1995

Figure 7.20: Close up photograph of eight excavated examples of undecorated stone and stoneware marbles ranging in size from 12 to 19 mm, all recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Figure 7.21: Eight undecorated molded clay marbles ranging in size from 11 to 26 mm, all recovered from the interior fill of the stone cistern within Lot 58 (Feature 800.04, Component IIIb).

Appendix I:

The Artifact Inventory.

PSA4 Component Groups

Component Group I (Cistern Related: Construction), Lot 58			TPQ
I	Feature 800.05	Deep Sample from the bottom of Stone Cistern	post 1820
I	Feature 806	Builder's Trench, Brick Drain (Feature 801)	1840
Component Group II (Early to Mid 19th. Century, Non-Cistern Related), Lot 59			
IIa	Feature 902.01	Upper Pit, Unit 12	1851
IIa	Feature 902.02	Upper Pit, Unit 12	1850
IIb	Feature 903	Lower Pit, Unit 12	ca. 1850
IIb	Feature 906	Interior Fill of Brick/Slab Drain, Unit 12	1850
Component Group III (Cistern Related: Use/Abandonment), Lot 58			
IIIa	Feature 800.03	Interior Fill, Stone Cistern	1850
IIIa	Feature 800.04	Interior Fill, Stone Cistern	1867
IIIb	Feature 801	Interior Fill, Brick Drain	post 1851
IIIb	Feature 803.01	Interior Fill, Brick Feature Adjacent to Cistern	1850
IIIb	Feature 803.02	Interior Fill, Brick/Slab Drain	1850
Component Group IV (Late 19th. Century Features), Lot 58			
IV	Feature 805	Builder's Trench, Ceramic Drain (Feat. 804)	1850
Component Group V (20th. Century Features), Lot 58 and Lot 59			
Va	Feature 802	Pit in Unit 6, Lot 58	ca. 1850
Vb	Feature 901.01	Brick Privy, Unit 11, Lot 59	20th. C debris
Vb	Feature 901.02	Brick Privy, Unit 11, Lot 59	20th. C debris
Vb	Feature 901.03	Brick Privy, Unit 11, Lot 59	20th. C debris
Vb	Feature 901.04	Brick Privy, Unit 11, Lot 59	1850

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
1.00	Lot 58	3/15/95	1	coin	Cu alloy	whole	1823	Dutch coin, "NEDERL..", "...INDIE..." "1823" "1/4 S"
1.01	Lot 58	8/23/94	1	20th C debris	plastic	fragment	20th C.	white fragments
1.01	Lot 58	8/23/94	1	20th C debris	plastic	molded fragment	1930 c	white molded "V" shaped fragments
1.01	Lot 58	8/23/94	1	20th C debris	vinyl	fragment	20th C.	red & white decoration, vinyl flooring fragments
1.01	Lot 58	8/23/94	1	bottle/container	glass	base fragment		clear pressed? glass jar base fragment
1.01	Lot 58	8/23/94	8	bottle/container	glass	base/body		aqua tinted fragments
1.01	Lot 58	8/23/94	1	bottle/container	glass	body fragment		clear stippled body fragment
1.01	Lot 58	8/23/94	1	bottle/container	glass	body fragment		pink tinted body fragment
1.01	Lot 58	8/23/94	1	bottle/container	glass	body fragment	20th C.	bright green stippled/embossed
1.01	Lot 58	8/23/94	4	bottle/container	glass	body fragment		olive green body fragments
1.01	Lot 58	8/23/94	6	bottle/container	glass	body fragment		brown body fragments
1.01	Lot 58	8/23/94	9	bottle/container	glass	body fragment		clear body fragments
1.01	Lot 58	8/23/94	1	bottle/container	glass	finish	19th C.	applied string rim-flattened; green
1.01	Lot 58	8/23/94	1	bottle/container	glass	partial finish		brown partial finish-wine/liquor?
1.01	Lot 58	8/23/94	1	bottle/container	glass	partial finish		thin, aqua tinted-possible vial
1.01	Lot 58	8/23/94	1	bottle/container	milk glass	base fragment		opaque white jar? base fragments
1.01	Lot 58	8/23/94	1	bottle/container	table glass	base fragment		possible wine/goblet base fragment, clear
1.01	Lot 58	9/21/94	1	ceramic	buff earthenware	body sherd		mottled brown glaze exterior, clear glaze interior
1.01	Lot 58	9/21/94	1	ceramic	buff earthenware	body sherd		spalled or unglazed; sandy paste
1.01	Lot 58	9/21/94	1	ceramic	buff earthenware	body spall		mottled red/brown glaze interior
1.01	Lot 58	9/21/94	4	ceramic	burned earthenware	rim/body		probably burned whiteware -2 blue transfer-print
1.01	Lot 58	9/21/94	12	ceramic	ironstone	rim/base/body	1850	thick, hard body, undecorated
1.01	Lot 58	9/21/94	1	ceramic	pearlware	body sherd	1795	underglaze polychrome painted
1.01	Lot 58	9/21/94	1	ceramic	pearlware	rim sherd	1790	annular decorated, blue & white
1.01	Lot 58	9/21/94	12	ceramic	pearlware	rim/base/body	1780	undecorated, few spalls
1.01	Lot 58	9/21/94	2	ceramic	pearlware	rim/body	1780	underglaze blue painted, floral motif
1.01	Lot 58	9/21/94	2	ceramic	pearlware	rim/body	1795	blue transfer prints, floral motifs
1.01	Lot 58	9/21/94	1	ceramic	porcelain	body sherd		thick, blue on white hard paste
1.01	Lot 58	9/21/94	1	ceramic	porcelain	rim sherd		blue on white decoration, hard paste
1.01	Lot 58	9/21/94	1	ceramic	porcelain	rim sherd		soft paste, possible fixture related
1.01	Lot 58	9/21/94	7	ceramic	porcelain	rim/body		undecorated soft paste
1.01	Lot 58	9/21/94	1	ceramic	red earthenware	body sherd		dark brown/black glaze exterior, brown glaze interior
1.01	Lot 58	9/21/94	1	ceramic	red earthenware	rim sherd		chamber pot?, mottled brown glaze interior
1.01	Lot 58	9/21/94	6	ceramic	redware	base/body		unglazed, few incised decoration, flower pot?
1.01	Lot 58	9/21/94	1	ceramic	stoneware	body sherd		brown glazed int/ext, gray body mug sherd?
1.01	Lot 58	9/21/94	1	ceramic	stoneware	body sherd		gray salt-glazed, brown slip interior
1.01	Lot 58	9/21/94	1	ceramic	stoneware	body spall		gray paste, light brown glaze interior, bottle sherd?

2.02	Lot 58	9/06/94	1	personal	glass/Cu alloy	mirror		1.5" diameter mirror in Cu alloy frame/backing
2.02	Lot 58	12/29/94	1	pipe	kaolin	bowl fragment		band of suns along rim; raised lines fanned out around bowl
2.02	Lot 58	12/29/94	2	pipe	kaolin	bowl fragment		rouletting around exterior of rim
2.02	Lot 58	12/29/94	2	pipe	kaolin	stem fragment		undecorated, stained
2.02	Lot 58	2/02/95	1	pipe	kaolin	stem fragment		undecorated
2.02	Lot 58	12/29/94	2	pipe	kaolin	stem/bowl fragment		banded, raised dot decoration on stem, alternative fluting &
2.02	Lot 58	12/29/94	47	shell	clam	fragment		hardshell clam
2.02	Lot 58	2/02/95	8	shell	clam	fragment		hardshell clam
2.02	Lot 58	12/29/94	1	shell	clam	whole 1/2		hardshell clam
2.02	Lot 58	2/02/95	1	shell	clam	whole half		hardshell clam
2.02	Lot 58	12/29/94	26	shell	oyster	fragment		
2.02	Lot 58	12/29/94	6	shell	oyster	whole 1/2		
2.02	Lot 58	12/29/94	1	spec activity	mammal bone	button blank		fragment, evidence of 2 buttons cut from fragment
2.02	Lot 58	2/02/95	1	spec activity	paper	label fragment		fiberous, printed on 1 side "MEN..."; "...FORE SHIP..."; "...
2.02	Lot 58	2/02/95	1	tool	iron	file		corroded
2.02	Lot 58	12/29/94	1	toy	glass	marble		24 mm multi-color, interior swirl decoration, pitted & weathe
2.02	Lot 58	12/29/94	1	toy	stone	marble		20 mm diameter, white w/red & blue geometric band decoration
2.02	Lot 58	12/29/94	2	toy	unglazed ceramic	marble		16 mm diameter; white w/red, green & black geometric band dec
2.02	Lot 58	12/29/94	1	utensil	iron/bone	handle		bone overlaying iron; badly corroded

6.02	Lot 58	12/09/94	1	misc hardware	iron/wood	fragment		stained, broken wood fragment, attached to corroded iron frag
6.02	Lot 58	12/09/94	1	misc hardware	steel	lock fragment	20th C.	probable automotive assoc, matrix atached
6.02	Lot 58	12/09/94	1	misc hardware	unident metal	bar		2" long, round bar; tapered on both ends
6.02	Lot 58	12/09/94	1	misc hardware	unident metal	sheet fragment		non-magnetic, white metal, beveled
6.02	Lot 58	12/09/94	1	misc hardware	unident metal	tack fragment		shank; round tapering to square; head missing
6.02	Lot 58	12/09/94	5	misc metal	iron	fragment		corroded
6.02	Lot 58	12/09/94	2	miscellaneous	cinder	fragment		
6.02	Lot 58	12/09/94	4	miscellaneous	coal	fragment		partially burnt
6.02	Lot 58	12/09/94	5	miscellaneous	coal	fragment		unburnt
6.02	Lot 58	12/09/94	1	miscellaneous	cotton	loose		dirty
6.02	Lot 58	12/09/94	2	miscellaneous	leather	scraps		weathered
6.02	Lot 58	2/21/95	3	miscellaneous	paper	printed fragment	20th C.	possible partial printed label
6.02	Lot 58	12/09/94	4	miscellaneous	slag	fragment		non-metallic
6.02	Lot 58	12/09/94	6	miscellaneous	slag	fragment		metallic
6.02	Lot 58	12/09/94	1	miscellaneous	stone	Manhattan schist		
6.02	Lot 58	12/09/94	1	miscellaneous	wood	fragment		
6.02	Lot 58	12/09/94	1	pipe	kaolin	stem fragment		undecorated
6.02	Lot 58	12/09/94	1	pipe	kaolin	stem/bowl fragment		fluting on bowl
6.02	Lot 58	12/09/94	1	pipe	kaolin	stem/bowl fragment		stained grey; foliated decoration on side of bowl
6.02	Lot 58	2/21/95	1	public services	earthenware	drain pipe fragment		brown glazed int/ext; water/sewer pipe
6.02	Lot 58	12/09/94	30	shell	clam	fragment		hardshell clam
6.02	Lot 58	12/09/94	1	shell	mussel	fragment		
6.02	Lot 58	12/09/94	8	shell	oyster	fragment		
6.02	Lot 58	12/09/94	1	shell	slipper	whole		small, 1/2" long
6.02	Lot 58	12/09/94	3	spec activity	cardboard	fragment	20th C.	2 black w/white exterior; 1 brown
6.02	Lot 58	12/09/94	7	textile	thread	woven fragment		non-dyed; frayed

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
6.02	Lot 58	12/09/94	1	textile	yarn	fragment		brown, 6 strands attached
6.02	Lot 58	12/09/94	1	textile	yarn	fragment		lime green yarn & string loosely woven
6.02	Lot 58	12/09/94	3	textile	yarn	fragment		pink
6.02	Lot 58	12/09/94	4	textile	yarn	fragment		1 blue, 1 navy, 1 white, 1 lime
6.02	Lot 58	12/09/94	5	textile	yarn	fragment		woven fragment; 4 pieces of yarn; gold; possible rug fragment
6.02	Lot 58	12/09/94	11	textile	yarn	fragment		red; badly worn
6.03	Lot 58	9/02/94	1	20th C debris	aluminum	can tab	1980 c/p	attached flip tab from beverage can
6.03	Lot 58	1/12/95	1	20th C debris	glass	body fragment		light blue; curved
6.03	Lot 58	1/12/95	1	20th C debris	hard plastic	fragment		clear
6.03	Lot 58	1/12/95	1	20th C debris	hard plastic	fragment		scratched, gold; raised ridge w/groove on underside; edging f
6.03	Lot 58	9/02/94	2	20th C debris	plastic	cup fragment	1930 c/p	clear
6.03	Lot 58	9/02/94	1	20th C debris	plastic	cut fragment		cut/saw mark; clear; 7/32" thick; 2 screen holes; possible au
6.03	Lot 58	9/02/94	1	20th C debris	plastic	fragment		clear; packaging fragment
6.03	Lot 58	9/02/94	1	20th C debris	plastic	fragment		white on 1 side, other side orange & ribbed; packaging materi
6.03	Lot 58	9/02/94	1	20th C debris	plastic	fragment	1930 p	vacuum formed, 4 petal, floral decoration; white w/slight pin
6.03	Lot 58	9/02/94	1	20th C debris	plastic	fragment		orange "skin-like" texture on 1 side
6.03	Lot 58	9/02/94	2	20th C debris	plastic	fragment		sheet fragment; opaque; no tint
6.03	Lot 58	9/02/94	3	20th C debris	plastic	fragment		opaque, wrapper fragment (?)
6.03	Lot 58	9/02/94	3	20th C debris	plastic	fragment		blue on 1 side; packaging fragment
6.03	Lot 58	1/12/95	2	20th C debris	plastic	fragment		no dye, packaging material(?)
6.03	Lot 58	1/12/95	4	20th C debris	plastic	fragment		sheet plastic; no tint; wrapper fragments?
6.03	Lot 58	9/13/94	1	20th C debris	plastic	molded fragment		molded opaque white plastic; broken unident object
6.03	Lot 58	1/12/95	1	20th C debris	plastic	spike fragment		blue dye on side; sheet plastic, wrapper fragment
6.03	Lot 58	9/02/94	1	20th C debris	plastic/surgical st	needle & cap		hypodermic needle broken off inside needle cap
6.03	Lot 58	9/02/94	1	20th C debris	styrofoam	fragment	1950 c/p	possible cup fragment
6.03	Lot 58	9/02/94	1	bottle/container	glass	base fragment		translucent, aqua-green tint
6.03	Lot 58	9/13/94	1	bottle/container	glass	base fragment		clear; thick
6.03	Lot 58	9/13/94	1	bottle/container	glass	base fragment		translucent; olive tint
6.03	Lot 58	9/13/94	2	bottle/container	glass	base fragment		opaque; olive-amber tint

6.03	Lot 58	9/13/94	3	faunal	mammal bone	fragment		broken/weathered; possibly proximal end of radius
6.03	Lot 58	1/12/95	4	faunal	mammal bone	fragment		broken/weathered
6.03	Lot 58	9/02/94	1	faunal	mammal bone	phalanx		weathered
6.03	Lot 58	9/13/94	8	faunal	mammal bone	rib fragment		broken/weathered
6.03	Lot 58	9/02/94	1	faunal	mammal bone	scapula fragment		glenoid fossa & adjacent neck
6.03	Lot 58	9/02/94	1	faunal	mammal bone	unident		possible scalupa fragment, weathered
6.03	Lot 58	9/02/94	1	faunal	mammal bone	unident		possible cuneiform, weathered
6.03	Lot 58	9/13/94	1	faunal	mammal bone	vertebra fragment		broken/weathered; lumbar(?)
6.03	Lot 58	1/12/95	1	faunal	mammal bone	vertebra fragment		broken/weathered
6.03	Lot 58	9/02/94	2	faunal	unident	fragment		possible rodent or small bird
6.03	Lot 58	1/12/95	4	faunal	unident	fragment		broken/weathered; possibly bird/rodent, 1 possibly scapula fr
6.03	Lot 58	1/12/95	1	misc hardware	Cu alloy	nut		round, 1/2" diameter, threaded interior hole, corroded 1 side
6.03	Lot 58	1/12/95	1	misc hardware	Cu alloy	unident		flat; rounded; bent; corroded; 1/2" diameter
6.03	Lot 58	1/12/95	2	misc hardware	Cu alloy	wire		bent into fish-hook shape; broken, corroded
6.03	Lot 58	1/12/95	1	misc hardware	dressed wood	fragment		possibly board/slat; broken/weathered
6.03	Lot 58	1/12/95	1	misc hardware	iron	bar fragment		ca. 3/4" wide rectangular strip, corroded
6.03	Lot 58	1/12/95	12	misc hardware	iron	sheet fragment		corroded
6.03	Lot 58	9/02/94	1	misc hardware	iron	spike fragment		corroded
6.03	Lot 58	1/12/95	1	misc hardware	iron	spike fragment		corroded
6.03	Lot 58	9/02/94	1	misc hardware	iron	unident		round; corroded; possible button
6.03	Lot 58	1/12/95	1	misc hardware	twine	fragment		brown, frayed
6.03	Lot 58	9/02/94	1	misc hardware	unident metal	unident		round; corroded; possible can bottom; non-magnetic
6.03	Lot 58	1/12/95	1	misc hardware	unident metal	wire		non-magnetic
6.03	Lot 58	9/02/94	2	misc metal	Cu alloy	fragment		corroded lumps
6.03	Lot 58	1/12/95	1	misc metal	Cu alloy	fragment		corroded lump, small
6.03	Lot 58	9/02/94	1	misc metal	aluminum	fragment		orange paint on 1 side; possible can fragment

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
6.03	Lot 58	9/02/94	15	misc metal	iron	fragment		corroded lumps
6.03	Lot 58	1/12/95	5	misc metal	iron	fragment		corroded, lumps
6.03	Lot 58	9/13/94	2	misc metal	iron	sheet fragment		corroded; strips, 1 fragment angled
6.03	Lot 58	9/02/94	1	misc metal	lead	fragment		
6.03	Lot 58	9/02/94	4	miscellaneous	cinder	fragment		
6.03	Lot 58	1/12/95	7	miscellaneous	cinder	fragment		
6.03	Lot 58	9/02/94	1	miscellaneous	coal	fragment		partially burned
6.03	Lot 58	9/02/94	4	miscellaneous	coal	fragment		unburned
6.03	Lot 58	9/13/94	1	miscellaneous	coal	fragment		partially burned
6.03	Lot 58	9/13/94	3	miscellaneous	coal	fragment		unburnt
6.03	Lot 58	1/12/95	2	miscellaneous	coal	fragment		unident
6.03	Lot 58	9/02/94	1	miscellaneous	glass	fragment		melted, no tint
6.03	Lot 58	9/13/94	1	miscellaneous	glass	fragment		melted; probably window glass; slight green tint
6.03	Lot 58	1/12/95	3	miscellaneous	leather	fragment		weathered, torn
6.03	Lot 58	9/13/94	1	miscellaneous	mammal bone	cut fragment		cut lenghwise, possible handle fragment; probably broken duri
6.03	Lot 58	9/02/94	1	miscellaneous	marble	fragment		friable
6.03	Lot 58	9/13/94	1	miscellaneous	marble	fragment		friable, white

800.04	Lot 58	1/25/95	5	ceramic	ironstone	saucer rim	1850	undecorated; 7" diameter saucer rim sherds
800.04	Lot 58	2/01/95	1	ceramic	ironstone	saucer rim	1859	embossed "ceres patttern"; 6" diameter saucer rim sherd
800.04	Lot 58	12/08/94	1	ceramic	ironstone	spout sherd	1850 c	blue transfer; fine detail floral/basket motif; thick body
800.04	Lot 58	1/19/95	7	ceramic	jasperware	plate sherd	1785-1825	thin, hard body; embossed floral, painted lilac-blue
800.04	Lot 58	2/01/95	2	ceramic	jasperware	rim sherd	1785-1825	embossed dot motif, very small rimsherds
800.04	Lot 58	1/19/95	2	ceramic	parianware	body sherd	1842 p	molded diamond pattern; unglazed imitation of marble
800.04	Lot 58	1/10/95	1	ceramic	pearlware	base sherd	1818-1846	dark blue transfer; "Franklin's Tomb" pattern; Enoch Wood & S
800.04	Lot 58	2/01/95	1	ceramic	pearlware	base sherd	1780	undecorated; thin, flat sherd
800.04	Lot 58	12/09/94	2	ceramic	pearlware	body sherd	1795	dark blue transfer print; geometric motif
800.04	Lot 58	12/09/94	2	ceramic	pearlware	body sherd	1795	dark blue transfer print; stippled pattern
800.04	Lot 58	12/09/94	3	ceramic	pearlware	body sherd	1780	undecorated
800.04	Lot 58	12/09/94	4	ceramic	pearlware	body sherd	1795	dark blue transfer print; floral motif
800.04	Lot 58	12/09/94	1	ceramic	pearlware	body spall	1795	dark blue transfer; delicate landscape, possible chinoiserie
800.04	Lot 58	12/09/94	1	ceramic	pearlware	rim sherd	1795	dark blue transfer print; floral motif plate rim

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	12/09/94	1	ceramic	pearlware	rim spall	1810 c	molded, blue shell edge decoration. plate rim spall
800.04	Lot 58	12/09/94	1	ceramic	pearlware	spout sherd	1795	underglaze polychrome painted yellow/brown/green
800.04	Lot 58	1/05/95	1	ceramic	porcelain	base sherd		overglaze polychrome enamel; detailed floral pattern w/gilt b
800.04	Lot 58	1/05/95	8	ceramic	porcelain	base sherd		base w/footring sherds; 3 vessels; probably cup or small bowl
800.04	Lot 58	1/05/95	4	ceramic	porcelain	base/body		blue or bluish white decoration; possibly chinese export
800.04	Lot 58	1/05/95	6	ceramic	porcelain	base/body		thick, undecorated soft paste; cup or bowl sherds
800.04	Lot 58	1/05/95	7	ceramic	porcelain	base/body		plain, undecorated soft paste; probable plate(s)
800.04	Lot 58	1/05/95	1	ceramic	porcelain	body sherd		molded w/traces of floral overglaze enamel decoration; probab
800.04	Lot 58	1/05/95	1	ceramic	porcelain	body sherd		molded with gilt band decoration, probable cup
800.04	Lot 58	1/05/95	1	ceramic	porcelain	body sherd		overglaze red enamel and gilt band; small sherd
800.04	Lot 58	1/05/95	4	ceramic	porcelain	body sherd		bluish white; no decoration present; possibly chinese export
800.04	Lot 58	1/05/95	8	ceramic	porcelain	body sherd		plain, undecorated soft paste; probable cup(s)
800.04	Lot 58	1/05/95	4	ceramic	porcelain	cup		100% mend w/o handle; gilt overglaze floral & script; 2" high
800.04	Lot 58	1/05/95	7	ceramic	porcelain	cup		90% mend; full ribbed (12); straight rim; intact handle; no m
800.04	Lot 58	1/05/95	17	ceramic	porcelain	cup		98% mend; full ribbed (12); straight rim; intact handle; no m
800.04	Lot 58	1/05/95	1	ceramic	porcelain	cup base		1 3/4" base diameter; molded, undecorated, soft paste; no mar
800.04	Lot 58	1/05/95	1	ceramic	porcelain	cup handle		plain undecorated; soft paste handle to teacup or demi-tasse
800.04	Lot 58	1/05/95	1	ceramic	porcelain	egg cup sherd		plain, undecorated soft paste; cup base and stem portion
800.04	Lot 58	1/05/95	1	ceramic	porcelain	handle		molded, basket-type handle to lid of vessel; soft paste
800.04	Lot 58	1/05/95	1	ceramic	porcelain	handle sherd		pink luster decoration on handle exterior; probable tea cup
800.04	Lot 58	1/05/95	1	ceramic	porcelain	lid sherd		blue on bluish white decoration concentric rings; 4" diameter
800.04	Lot 58	1/05/95	1	ceramic	porcelain	lid sherd		blue on bluish white decoration; 3 1/2" diameter lid
800.04	Lot 58	1/05/95	1	ceramic	porcelain	rim sherd		1 1/2" rim diameter plain undecorated, soft paste; probably e
800.04	Lot 58	1/05/95	1	ceramic	porcelain	rim sherd		overglaze enamel decoration red floral; probable cup
800.04	Lot 58	1/05/95	1	ceramic	porcelain	rim sherd		traces overglaze enamel decoration on rim; probable plate
800.04	Lot 58	1/05/95	1	ceramic	porcelain	rim sherd		undecorated exterior; bisque interior
800.04	Lot 58	1/05/95	1	ceramic	porcelain	rim sherd	1800 p	Canton/Nanking "Rain & Clouds" border blue on white
800.04	Lot 58	1/05/95	4	ceramic	porcelain	rim sherd		plain, undecorated, very thin rim sherds; probably plate
800.04	Lot 58	1/05/95	5	ceramic	porcelain	rim sherd		undecorated, thin; small rim sherds; probable plate
800.04	Lot 58	1/19/95	1	ceramic	porcelain	rim sherd		overglaze gilt decoration on interior; soft-paste; plate/sauc
800.04	Lot 58	1/19/95	1	ceramic	porcelain	rim sherd	1805	pink luster dec; floral motif; soft-paste; small plate/saucer
800.04	Lot 58	1/05/95	2	ceramic	porcelain	rim/body		blue on white decoration, tiny sherds
800.04	Lot 58	1/05/95	3	ceramic	porcelain	rim/body		molded, tiny soft paste sherds
800.04	Lot 58	2/01/95	10	ceramic	porcelain	rim/body		undecorated soft paste, tiny sherds
800.04	Lot 58	1/05/95	27	ceramic	porcelain	sherd/spall		plain, undecorated body sherds and spalls
800.04	Lot 58	12/09/94	2	ceramic	red earthenware	base sherd		unglazed; flower pot w/drain hole; red-tan paste
800.04	Lot 58	12/09/94	3	ceramic	red earthenware	base sherd		unglazed; possible slipped exterior; flower pot; thick body
800.04	Lot 58	12/13/94	1	ceramic	red earthenware	base sherd		unglazed; flower pot; flower pot small base diameter

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	12/09/94	8	ceramic	red earthenware	base/body		unglazed; flower pot; very orange paste

800.04	Lot 58	1/04/95	34	ceramic	yellowware	chamber pot	1850 c	98% mend; blue & white fine bands; 9" rim diameter, w/handle
800.04	Lot 58	1/17/95	1	ceramic	yellowware	handle sherd	1850 c	Rockingham-type glaze; ebossed rope-like motif; teapot/pitche
800.04	Lot 58	1/17/95	1	ceramic	yellowware	handle sherd	1850 c	Rockingham-type mottled brown glaze; embossed wide handle
800.04	Lot 58	1/17/95	2	ceramic	yellowware	handle sherd	1850 c	Rockingham-type glaze; embossed tree branch motif-teapot
800.04	Lot 58	1/05/95	1	ceramic	yellowware	rim sherd	1827	blue & white banded decoration ext; rolled rim, probably mug
800.04	Lot 58	1/05/95	1	ceramic	yellowware	rim sherd	1827	undecorated; plain rim; probable plate
800.04	Lot 58	1/05/95	3	ceramic	yellowware	rim sherd	1827	undecorated, thick rims
800.04	Lot 58	1/17/95	1	ceramic	yellowware	rim sherd	1850 c	Rockingham-type glaze int/ext; embossed; plain rim; cup/tanka
800.04	Lot 58	1/17/95	1	ceramic	yellowware	rim sherd	1850 c	Rockingham-type glaze; probable octagonal shaped teapot
800.04	Lot 58	1/17/95	2	ceramic	yellowware	rim sherd	1850 c	Rockingham-type glaze int/ext; probable pie plate/baking pan
800.04	Lot 58	1/17/95	2	ceramic	yellowware	rim sherd	1850 c	Rockingham-type mottled brown glaze; embossed panels; probabl
800.04	Lot 58	1/17/95	5	ceramic	yellowware	rim sherd	1850 c	Rockingham-type glaze; fluted body; buff yellow paste; probab
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	buckle		1 1/4" x 3/4", double tang brass buckle
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	buckle tang		5/8" long, broken, probable buckle tang
800.04	Lot 58	9/15/94	2	clothing rel	Cu alloy	button		1/8" diameter, convex face; 1 missing eyelet; corroded
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		1/2" diameter, domed, possible machine embossed, Cu alloy eye
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		1/4" diameter, domed, Cu alloy eye, small button
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		3/8" diameter, disc missing eye, very corroded
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		4/16" diameter, domed, Cu alloy eye, very corroded
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		5/8 diameter, domed, possible machine embossed, Cu alloy eye
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		5/8" diameter, 4-hole concave front, convex back
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		5/8" diameter, 4-hole disc, rounded back, corroded
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		5/8" diameter, domed, possible machine embossed, Cu alloy eye
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		5/8" diameter, flat disk, Cu alloy eye, corroded
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		7/8" diameter, domed, machine embossed, missing back
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		9/16" diameter, 4-hole sunken panel, stamped brass
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		9/16" diameter, domed, machine embossed, Cu alloy eye
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		9/16" diameter, domed, possible machine embossed, Cu alloy ey
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button		9/16" diameter, flat disc, Cu alloy eye, corroded
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button front		5/8" diameter, machine stamped, corroded, missing back
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	button front		9/16" diameter, domed, machine stamped, corroded, missing bac
800.04	Lot 58	11/17/94	2	clothing rel	Cu alloy	eye		eyes from hook & eye fasteners, 2 sizes
800.04	Lot 58	11/17/94	1	clothing rel	Cu alloy	eyelet		1/4" diameter, Cu alloy circle, probable eyelet for laces
800.04	Lot 58	11/17/94	6	clothing rel	Cu alloy	hook		2 are hooks & hook fragments from hook & eye fastener
800.04	Lot 58	10/13/94	1	clothing rel	bone	button		5/16" diameter, 4-hole inset, whole
800.04	Lot 58	10/13/94	1	clothing rel	bone	button		5/8" diameter, 4-hole inset rolled/rounded rim

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	10/13/94	1	clothing rel	bone	button		5/8" diameter, 5-hole inset, irregular hole spacing
800.04	Lot 58	10/13/94	1	clothing rel	bone	button		9/16" diameter, 5-hole, slightly inset worn
800.04	Lot 58	10/13/94	2	clothing rel	bone	button		1/2" diameter, 4-hole inset, one very worn
800.04	Lot 58	10/13/94	2	clothing rel	bone	button		11/16" diameter; raised front, 2-hole deeply inset
800.04	Lot 58	10/13/94	3	clothing rel	bone	button		9/16" diameter, 4-hole inset
800.04	Lot 58	10/17/94	1	clothing rel	bone	button		5/8" diameter, 4-hole inset, 1 w/rounded back
800.04	Lot 58	1/24/95	1	clothing rel	bone	button		21/32" diameter; 4-hole inset; sunken platform
800.04	Lot 58	10/17/94	1	clothing rel	bone?	button		11/16" diameter, 4-hole concave front, rounded back
800.04	Lot 58	10/17/94	1	clothing rel	bone?	button		11/16" diameter, 4-hole inset, rolled rim, rounded back
800.04	Lot 58	10/13/94	1	clothing rel	glass	button		1/4" metal foot, opaque, facetted
800.04	Lot 58	10/13/94	1	clothing rel	glass	button		3/8" metal eye, square, molded face; opaque
800.04	Lot 58	10/13/94	1	clothing rel	glass	button		5/16" metal eye, black, opaque, molded face; 5 point fleur de
800.04	Lot 58	10/17/94	1	clothing rel	glass	button		5/8" diameter, Cu alloy eye, beveled rim black glass
800.04	Lot 58	11/28/94	1	clothing rel	iron	buckle		very corroded; 1 3/4" x 1 1/4" rectangular; missing tang
800.04	Lot 58	1/26/95	3	clothing rel	leather	glove fragment		finger fragments from leather glove palm; 2 fragments mend; s
800.04	Lot 58	1/26/95	1	clothing rel	leather	heel fragment		heavily weathered; iron shoe tacks present; layered heel
800.04	Lot 58	1/24/95	1	clothing rel	leather	shoe fragment		toe fragment, stitching holes
800.04	Lot 58	1/26/95	1	clothing rel	leather	shoe heel		layered heel; attached sole fragment w/stitching holes, iron
800.04	Lot 58	1/24/95	2	clothing rel	leather	shoe sole		with stitching holes; 1 sole ca. 9 3/4" long; other ca. 9 1/8
800.04	Lot 58	1/24/95	4	clothing rel	leather	shoe sole		with stitching holes; built-up heels attached by iron nails &
800.04	Lot 58	1/24/95	1	clothing rel	leather	shoe sole fragment		Cu alloy nails, built-up heel attached
800.04	Lot 58	1/24/95	1	clothing rel	leather	shoe sole fragment		sole fragment, has built-up heel attached w/iron nails & stit
800.04	Lot 58	1/24/95	2	clothing rel	leather	shoe sole fragment		sole edge; corroded Cu alloy nails
800.04	Lot 58	1/24/95	5	clothing rel	leather	shoe sole fragment		with stitching holes
800.04	Lot 58	1/24/95	6	clothing rel	leather	shoe sole fragment		random fragments, 1 in-step fragment
800.04	Lot 58	1/24/95	7	clothing rel	leather	shoe sole fragment		with corroded, iron nails
800.04	Lot 58	1/24/95	9	clothing rel	leather	shoe sole fragment		with stitching holes
800.04	Lot 58	1/26/95	2	clothing rel	leather	shoe sole fragment		1 fragment w/iron tack fragments' other fragments w/stitching
800.04	Lot 58	1/26/95	1	clothing rel	leather	unident fragment		tapered fragment; cut on 1 side, stitching holed on other sid
800.04	Lot 58	10/13/94	1	clothing rel	milk glass	button		1/8" 3-hole inset; convex face; sunken panel
800.04	Lot 58	10/13/94	2	clothing rel	milk glass	button		15/32" diameter, 4-hole inset
800.04	Lot 58	10/13/94	2	clothing rel	milk glass	button		23/32" diameter, 4-hole inset, one whole, one half
800.04	Lot 58	10/13/94	3	clothing rel	milk glass	button		1/4" diameter, metal foot
800.04	Lot 58	10/13/94	4	clothing rel	milk glass	button		11/16" diameter, 4-hole inset
800.04	Lot 58	10/13/94	4	clothing rel	milk glass	button		5/16" diameter, 4-hole inset
800.04	Lot 58	10/13/94	5	clothing rel	milk glass	button		11/32" diameter, 4-hole inset
800.04	Lot 58	10/13/94	5	clothing rel	milk glass	button		17/32" diameter, 4-hole inset

800.04	Lot 58	9/14/94	1	construction rel	wood	lathe fragment		burnt; nail fragment, piercing wood
800.04	Lot 58	9/14/94	4	construction rel	wood	lathe fragment		burnt; 2 fragments mend
800.04	Lot 58	9/14/94	82	construction rel	wood	lathe fragment		broken/weathered
800.04	Lot 58	9/15/94	23	construction rel	wood	lathe fragment		
800.04	Lot 58	11/17/94	1	dec furnishing	Cu alloy	clasp		embossed/stamped, jewelry box or handbag type clasp
800.04	Lot 58	11/17/94	1	dec furnishing	Cu alloy	escutcheon		small lock cover w/keyhole, probable furniture/box related
800.04	Lot 58	11/17/94	1	dec furnishing	Cu alloy	fixture		1 1/2" x 3/4" fixture for hanging window curtain/shade
800.04	Lot 58	11/17/94	10	dec furnishing	Cu alloy	strap fragment		5/16" wide, stamped/embossed-probably decorative
800.04	Lot 58	1/19/95	1	dec furnishing	glass	fragment		frosted, no tint, painted gold flower motif
800.04	Lot 58	11/17/94	18	dec furnishing	glass	mirror fragment		dec. furnishing or personal mirror fragments
800.04	Lot 58	9/15/94	2	dressed wood	wood	unident		1 object; round w/hole in center; 5/16" thick
800.04	Lot 58	10/17/94	50	faunal	bird bone	eggshell fragment		eggshell in soil matrix recovered during excavation
800.04	Lot 58	10/25/94	1	faunal	bird bone	fragment		possible distal end of femur
800.04	Lot 58	10/25/94	1	faunal	bird bone	fragment		fractured end with head present
800.04	Lot 58	10/25/94	1	faunal	bird bone	fragment		possible distal end of femur
800.04	Lot 58	10/25/94	2	faunal	bird bone	fragment		long, ends broken
800.04	Lot 58	10/25/94	2	faunal	bird bone	fragment		2 epiphysial growth centers; 2 foramen or posterior(?) side
800.04	Lot 58	10/25/94	3	faunal	bird bone	fragment		possible proximal end of tibia
800.04	Lot 58	10/25/94	4	faunal	bird bone	fragment		2 with intact ends
800.04	Lot 58	10/25/94	1	faunal	bird bone	unident fragment		possible proximal end of left tibia
800.04	Lot 58	10/25/94	1	faunal	bird bone	unidentified		wing or leg bone; 2 grown together to form 1 bone
800.04	Lot 58	10/25/94	1	faunal	bird bone	unidentified		possible left tibia; proximal end, middle growth center broke
800.04	Lot 58	10/25/94	2	faunal	bird bone	unidentified		1 whole, 1 fragment, lower leg bone(?); bone spur
800.04	Lot 58	10/25/94	3	faunal	bird bone	unidentified		1 whole, 2 fragments; grooved processes on 1 end; 3 growth ce
800.04	Lot 58	10/25/94	3	faunal	bird bone	unidentified		1 whole; 2 fragments; possible upper leg bone; large foramen
800.04	Lot 58	10/25/94	4	faunal	bird bone	unidentified		2 whole; 2 fragments; 3 growth centers on each epiphysis

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	2/08/95	27	faunal	calcined bone	unident fragment		burned; white fragments, probably mammal
800.04	Lot 58	10/25/94	3	faunal	fish bone	cranium		weathered
800.04	Lot 58	10/25/94	3	faunal	fish bone	fragment		possible vertebral fragments, angled ca 60 degrees
800.04	Lot 58	10/25/94	3	faunal	fish bone	fragment		ribs(?)
800.04	Lot 58	10/25/94	5	faunal	fish bone	fragment		fin/clavicle/pectoral ray(?)
800.04	Lot 58	10/25/94	10	faunal	fish bone	fragment		various bones
800.04	Lot 58	9/15/94	1	faunal	fish bone	mandible		lower, right half of jaw
800.04	Lot 58	10/25/94	3	faunal	fish bone	mandible		possible sheep's head/sturgeon; 2 right, 1 left
800.04	Lot 58	9/13/94	5	faunal	fish bone	rib		
800.04	Lot 58	10/25/94	9	faunal	fish bone	rib		6 whole; 3 fragments; 6 right, 3 left
800.04	Lot 58	9/13/94	12	faunal	fish bone	scale		fins (?)
800.04	Lot 58	9/13/94	15	faunal	fish bone	scale		
800.04	Lot 58	9/14/94	14	faunal	fish bone	scale		fin (?)
800.04	Lot 58	9/14/94	17	faunal	fish bone	scale		various sizes
800.04	Lot 58	9/15/94	41	faunal	fish bone	scale		
800.04	Lot 58	9/15/94	76	faunal	fish bone	scale		various sizes
800.04	Lot 58	9/13/94	3	faunal	fish bone	unidentified		
800.04	Lot 58	9/13/94	5	faunal	fish bone	unidentified		fragment
800.04	Lot 58	9/14/94	7	faunal	fish bone	unidentified		same type
800.04	Lot 58	9/14/94	15	faunal	fish bone	unidentified		fragment; various types
800.04	Lot 58	9/15/94	4	faunal	fish bone	unidentified		fins (?)
800.04	Lot 58	9/15/94	8	faunal	fish bone	unidentified		fragment
800.04	Lot 58	10/25/94	1	faunal	fish bone	unidentified		possible pharyngeal
800.04	Lot 58	10/25/94	1	faunal	fish bone	unidentified		possible ventral spine
800.04	Lot 58	10/25/94	2	faunal	fish bone	unidentified		sharp, triangular bones; from opposite sides
800.04	Lot 58	9/13/94	5	faunal	fish bone	vertebrae		various sizes
800.04	Lot 58	9/14/94	33	faunal	fish bone	vertebrae		various sizes
800.04	Lot 58	9/15/94	24	faunal	fish bone	vertebrae		whole and fragments; various sizes
800.04	Lot 58	10/25/94	1	faunal	mammal bone	astragalus		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	calcaneus		whole
800.04	Lot 58	10/25/94	1	faunal	mammal bone	calcaneus		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	cranial skull		3 pieces: ethmoid & interparietal(?) unarticulated; zygomatic
800.04	Lot 58	10/25/94	1	faunal	mammal bone	cranial skull fragm		unident (possible squirrel); matrix attached
800.04	Lot 58	10/25/94	3	faunal	mammal bone	cut fragment		cut & saw marks, long bone ends; separation between epiphysis
800.04	Lot 58	10/25/94	16	faunal	mammal bone	cut fragment		partial round cut fragments; cut & saw marks
800.04	Lot 58	10/25/94	26	faunal	mammal bone	cut fragment		round cut fragments, cut & saw marks
800.04	Lot 58	10/25/94	46	faunal	mammal bone	cut fragment		fragile
800.04	Lot 58	10/25/94	174	faunal	mammal bone	cut fragment		cut & saw marks

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	1/24/95	1	faunal	mammal bone	cut fragment		cut/saw marks
800.04	Lot 58	1/26/95	1	faunal	mammal bone	cut fragment		cut/saw marks; missing epiphysis
800.04	Lot 58	1/26/95	1	faunal	mammal bone	cut fragment		possible scapula fragment (left); heavily knawed
800.04	Lot 58	10/25/94	95	faunal	mammal bone	cut rib		various sizes
800.04	Lot 58	10/25/94	31	faunal	mammal bone	cut vertebrae		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	epiphysis		head of long bone
800.04	Lot 58	10/25/94	1	faunal	mammal bone	epiphysis		weathered; possible distal end of humerus
800.04	Lot 58	10/25/94	1	faunal	mammal bone	epiphysis		proximal end of tibia/distal end of radius (?)
800.04	Lot 58	10/25/94	1	faunal	mammal bone	epiphysis		distal end of tibia (?)
800.04	Lot 58	10/25/94	4	faunal	mammal bone	epiphysis		distal portion of femur (?); 2 right, 2 left
800.04	Lot 58	10/25/94	4	faunal	mammal bone	femur fragment		missing epiphysis
800.04	Lot 58	10/25/94	1	faunal	mammal bone	fibula		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	fibula fragment		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	fragment		rounded broken process
800.04	Lot 58	10/25/94	1	faunal	mammal bone	fragment		possible left tibia; broken at both ends
800.04	Lot 58	10/25/94	1	faunal	mammal bone	fragment		attached to metal strip by corrosion
800.04	Lot 58	10/25/94	2	faunal	mammal bone	fragment		broken; 1 missing its epiphysis
800.04	Lot 58	10/25/94	74	faunal	mammal bone	fragment		broken/weathered; tiny, rodent/small
800.04	Lot 58	10/25/94	185	faunal	mammal bone	fragment		uncut; broken/weathered
800.04	Lot 58	10/25/94	4	faunal	mammal bone	frontal		3 left; 1 right
800.04	Lot 58	10/25/94	3	faunal	mammal bone	humerus		whole; right
800.04	Lot 58	10/25/94	1	faunal	mammal bone	innominate		badly weathered
800.04	Lot 58	10/25/94	1	faunal	mammal bone	innominate		small, whole; possible bird(?)
800.04	Lot 58	10/25/94	1	faunal	mammal bone	innominate		weathered; right, possible sheep
800.04	Lot 58	10/25/94	1	faunal	mammal bone	innominate fragment		missing pubis & ischium
800.04	Lot 58	10/25/94	1	faunal	mammal bone	long bone fragment		heavily knawed
800.04	Lot 58	10/25/94	2	faunal	mammal bone	mandible		articulating; incisors articulated
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		2 articulated teeth
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		right; articulated canines
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		no articulated teeth; knawed; right(?)
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		right, back 1/2, including gonial angle
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		articulated, 6-cusp(?) molar
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		left; articulated molar; 1/2 of premolar
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		5 cusp molar articulated
800.04	Lot 58	10/25/94	1	faunal	mammal bone	mandible fragment		right; teeth present-incisors, canine, premolar (w/extensive
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		no articulated teeth
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		left, articulated premolar (?)
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		right, articulated canine

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		articulated incisor and canine; left
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		fragment of erupting tooth
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		left, articulated 5 cusp. molar; partial molar located distal
800.04	Lot 58	10/25/94	1	faunal	mammal bone	maxilla fragment		2 1/2 articulated molars; right
800.04	Lot 58	10/25/94	1	faunal	mammal bone	naviculo-cuboid		weathered
800.04	Lot 58	10/25/94	1	faunal	mammal bone	naviculo-cuboid		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	naviculo-cuboid		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	pelvic girdle frag		2 innominates, sacrum & coccyx articulated
800.04	Lot 58	10/25/94	37	faunal	mammal bone	phalanx		1 fragment; 1 third phalanx
800.04	Lot 58	10/25/94	13	faunal	mammal bone	radius		probably rodent; 1 w/attached ulna
800.04	Lot 58	10/25/94	9	faunal	mammal bone	rib fragment		fragile; uncut, broken
800.04	Lot 58	10/25/94	17	faunal	mammal bone	rib fragment		1 whole; 5 right; 7 left; small; possible rodent
800.04	Lot 58	10/25/94	36	faunal	mammal bone	rib fragment		uncut; broken/weathered
800.04	Lot 58	10/25/94	2	faunal	mammal bone	sacrum fragment		badly weathered
800.04	Lot 58	10/25/94	1	faunal	mammal bone	scapula fragment		small rodent(?)
800.04	Lot 58	10/25/94	1	faunal	mammal bone	scapula fragment		glenoid fossa and associated processes broken off
800.04	Lot 58	10/25/94	4	faunal	mammal bone	scapula fragment		cut & weathered
800.04	Lot 58	10/25/94	1	faunal	mammal bone	skull fragment		both parietals & occipital articulated
800.04	Lot 58	10/25/94	2	faunal	mammal bone	skull fragment		occipital fragments
800.04	Lot 58	10/25/94	1	faunal	mammal bone	small fragment		2 parietals & occipital articulated
800.04	Lot 58	10/25/94	2	faunal	mammal bone	temporal		1 right; 1 left
800.04	Lot 58	10/25/94	3	faunal	mammal bone	tibia		whole; 2 right, 1 left
800.04	Lot 58	10/25/94	1	faunal	mammal bone	tibia fragment		distal end of right tibia; possible sides
800.04	Lot 58	10/25/94	1	faunal	mammal bone	tooth		incisor
800.04	Lot 58	10/25/94	1	faunal	mammal bone	tooth		canine
800.04	Lot 58	10/25/94	1	faunal	mammal bone	tooth		molar/premolar; broken root, 5-cusp
800.04	Lot 58	10/25/94	1	faunal	mammal bone	tooth		molar; 5-cusp; no root; crown only
800.04	Lot 58	10/25/94	2	faunal	mammal bone	tooth		incisors
800.04	Lot 58	10/25/94	4	faunal	mammal bone	tooth		incisors
800.04	Lot 58	10/25/94	5	faunal	mammal bone	tooth		canine
800.04	Lot 58	10/25/94	5	faunal	mammal bone	tooth		molars/premolar
800.04	Lot 58	10/25/94	2	faunal	mammal bone	tooth fragment		small, canines(?)
800.04	Lot 58	10/25/94	9	faunal	mammal bone	tooth fragment		roots, enamel, crown
800.04	Lot 58	10/25/94	2	faunal	mammal bone	ulna		right & left
800.04	Lot 58	10/25/94	7	faunal	mammal bone	ulna		small; 5 probably rodent
800.04	Lot 58	10/25/94	1	faunal	mammal bone	ulna fragment		knawed
800.04	Lot 58	10/25/94	6	faunal	mammal bone	ulna fragment		
800.04	Lot 58	10/25/94	7	faunal	mammal bone	ulna fragment		3 proximal end fragments(?); 2 distal end fragments(?) 1 weat

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	10/25/94	1	faunal	mammal bone	unidentified		angled ca. 90 degrees, articulation point at angle, in center
800.04	Lot 58	10/25/94	1	faunal	mammal bone	unidentified		possible temporal bone
800.04	Lot 58	10/25/94	1	faunal	mammal bone	unidentified		
800.04	Lot 58	10/25/94	1	faunal	mammal bone	unidentified		possible naviculo-cuboid
800.04	Lot 58	10/25/94	1	faunal	mammal bone	unidentified		possible right radius w/distal epiphysis missing
800.04	Lot 58	10/25/94	2	faunal	mammal bone	unidentified		possible clavicle
800.04	Lot 58	10/25/94	2	faunal	mammal bone	unidentified		long bones; 1 missing epiphysis
800.04	Lot 58	10/25/94	2	faunal	mammal bone	unidentified		whole, radii(?)
800.04	Lot 58	10/25/94	2	faunal	mammal bone	unidentified		radii with distal epiphysis missing(?)
800.04	Lot 58	10/25/94	3	faunal	mammal bone	unidentified		possible left tibia with distal epiphysis missing
800.04	Lot 58	10/25/94	3	faunal	mammal bone	unidentified		1 epiphysis missing on each; trochander/process on other end
800.04	Lot 58	10/25/94	4	faunal	mammal bone	unidentified		missing epiphysis on one end
800.04	Lot 58	10/25/94	8	faunal	mammal bone	unidentified		possible rodent radii; 6 left, 2 right
800.04	Lot 58	10/25/94	3	faunal	mammal bone	vertebrae		whole; small
800.04	Lot 58	10/25/94	9	faunal	mammal bone	vertebrae fragment		3 cervical; 3 thoracic, 3 lumbar(?)
800.04	Lot 58	10/25/94	28	faunal	mammal bone	vertebrae fragment		uncut; broken/weathered
800.04	Lot 58	10/25/94	1	faunal	mammal bone	zygoma		left
800.04	Lot 58	10/25/94	1	faunal	rodent bone	cranium		teeth present; zygomatic arches broken
800.04	Lot 58	10/25/94	9	faunal	rodent bone	femur		1 whole (distal end broken); weathered; 4 right; 5 left
800.04	Lot 58	1/26/95	1	faunal	rodent bone	long bone		
800.04	Lot 58	10/25/94	4	faunal	rodent bone	mandible		2 right; 2 left; teeth present
800.04	Lot 58	10/25/94	1	faunal	rodent bone	nasal		right & left, articulated
800.04	Lot 58	9/12/94	165	faunal	unident bone	fragment		broken; weathered; mammal/fish/bird; not washed
800.04	Lot 58	9/14/94	129	faunal	unident bone	fragment		broken; weathered; mammal/fish/bird; not washed
800.04	Lot 58	9/15/94	141	faunal	unident bone	fragment		broken; weathered; mammal/fish/bird; not washed
800.04	Lot 58	10/25/94	1	faunal	unident bone	fragment		possible horseshoe crab
800.04	Lot 58	10/25/94	4	faunal	unident bone	fragment		burnt
800.04	Lot 58	10/25/94	3	faunal	unident bone	innominate fragment		small; possible bird
800.04	Lot 58	9/14/94	15	faunal	unident bone	rib		fish/small mammal
800.04	Lot 58	9/15/94	18	faunal	unident bone	rib		small mammal/fish
800.04	Lot 58	9/13/94	1	faunal	unident bone	scapula		small mammal
800.04	Lot 58	9/15/94	3	faunal	unident bone	scapula		small mammal/fish
800.04	Lot 58	10/25/94	1	faunal	unident bone	unident fragment		flat, long
800.04	Lot 58	9/13/94	9	faunal	unident bone	unidentified		fish or small mammal
800.04	Lot 58	9/14/94	7	faunal	unident bone	unidentified		probably mammal; spongy surface; possible antler
800.04	Lot 58	9/15/94	4	faunal	unident bone	unidentified		same type
800.04	Lot 58	9/15/94	10	faunal	unident bone	unidentified		small, fragments; small mammal/fish
800.04	Lot 58	1/05/95	1	figurine	porcelain	base		1" x 3/4" molded/embosed; 6 broken off surfaces on top; "83"

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	1/05/95	1	figurine	porcelain	base sherd		octagonal base w/gilt decoration overglaze; probable figurine
800.04	Lot 58	1/05/95	1	figurine	porcelain	body sherd		molded white ext; bisque int; not identifiable
800.04	Lot 58	1/05/95	1	figurine	porcelain	body sherd		undecorated white int/ext; not identifiable
800.04	Lot 58	1/05/95	3	figurine	porcelain	body sherd		molded white fragments; not identifiable
800.04	Lot 58	2/08/95	1	figurine	porcelain	body sherd		molded; black & white painted, unidentified figure
800.04	Lot 58	2/08/95	2	figurine	porcelain	body sherd		one black painted; one black & purple painted
800.04	Lot 58	1/05/95	1	figurine	porcelain	dog torso		overglaze brown & green painted; "52" on interior base
800.04	Lot 58	9/13/94	2	floral	apple	seed		
800.04	Lot 58	9/13/94	16	floral	cherry	pit		fragments
800.04	Lot 58	9/13/94	59	floral	cherry	pit		whole
800.04	Lot 58	9/14/94	18	floral	cherry	pit		fragment
800.04	Lot 58	9/14/94	87	floral	cherry	pit		whole
800.04	Lot 58	9/15/94	5	floral	cherry	pit		whole
800.04	Lot 58	9/15/94	9	floral	cherry	pit		fragment
800.04	Lot 58	9/15/94	145	floral	cherry	pit		whole
800.04	Lot 58	9/15/94	1	floral	corn	kernel		whole
800.04	Lot 58	9/13/94	2	floral	gourd family	seed		melon/squash
800.04	Lot 58	9/14/94	1	floral	gourd family	seed		whole; melon/squash
800.04	Lot 58	9/15/94	1	floral	gourd family	seed		fragment; squash/pumpkin (?)
800.04	Lot 58	9/13/94	14	floral	peach	pit		whole
800.04	Lot 58	9/14/94	25	floral	peach	pit		fragment
800.04	Lot 58	9/14/94	32	floral	peach	pit		whole
800.04	Lot 58	9/15/94	46	floral	peach	pit		whole
800.04	Lot 58	9/15/94	66	floral	peach	pit		fragment
800.04	Lot 58	9/15/94	1	floral	peach	pit fragment		
800.04	Lot 58	9/14/94	2	floral	peanut	shell		fragment
800.04	Lot 58	9/15/94	2	floral	peanut	shell		whole
800.04	Lot 58	9/15/94	6	floral	peanut	shell		fragment
800.04	Lot 58	9/15/94	1	floral	peanut	shell fragment		
800.04	Lot 58	9/13/94	1	floral	peanut	shell/nut		
800.04	Lot 58	9/15/94	2	floral	peanut	shell/nut		whole; 1 nut each
800.04	Lot 58	9/13/94	5	floral	unident	bark fragment		
800.04	Lot 58	9/13/94	1	floral	unident	nut		fragment
800.04	Lot 58	9/13/94	1	floral	unident	nut		fragment

800.04	Lot 58	9/13/94	1	floral	unident	nut		
800.04	Lot 58	9/14/94	1	floral	unident	nut		whole
800.04	Lot 58	9/15/94	1	floral	unident	nut		possible walnut

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	9/15/94	1	floral	unident	nut		possible chestnut
800.04	Lot 58	9/15/94	2	floral	unident	nut		fragment, acorn (?)
800.04	Lot 58	9/13/94	1	floral	unident	nutshell		
800.04	Lot 58	9/13/94	1	floral	unident	nutshell		fragment
800.04	Lot 58	9/14/94	1	floral	unident	nutshell		fragment
800.04	Lot 58	9/14/94	3	floral	unident	nutshell		fragment; possible acorn (?)
800.04	Lot 58	9/13/94	5	floral	unident	pit		fragment; apricot/plum (?)
800.04	Lot 58	9/13/94	16	floral	unident	pit		fragment
800.04	Lot 58	9/13/94	45	floral	unident	pit		whole; apricot/plum (?)
800.04	Lot 58	9/14/94	7	floral	unident	pit		fragment; apricot/plum (?)
800.04	Lot 58	9/14/94	40	floral	unident	pit		whole; apricot/plum (?)
800.04	Lot 58	9/15/94	5	floral	unident	pit		fragment; apricot/plum (?)
800.04	Lot 58	9/15/94	32	floral	unident	pit		whole; apricot/plum (?)
800.04	Lot 58	9/14/94	1	floral	unident	seed		
800.04	Lot 58	9/15/94	1	floral	unident	seed		whole
800.04	Lot 58	11/28/94	2	floral	unident	stem fragment		probable reed or water related plant stem
800.04	Lot 58	9/13/94	3	floral	unident	unidentified		fragment; nut/seed
800.04	Lot 58	9/14/94	2	floral	unident	unidentified		
800.04	Lot 58	9/15/94	1	floral	unident	unidentified		whole; seed/pod (?)
800.04	Lot 58	9/15/94	3	floral	unident	unidentified		nut/seed shell; fragment
800.04	Lot 58	11/17/94	1	furniture rel	Cu alloy	tack		upholstery tack
800.04	Lot 58	9/14/94	1	furniture rel	wood	dowel		dressed at both ends; pitted from nail/screen; possible chair
800.04	Lot 58	9/13/94	3	furniture rel	wood	frame fragment		3 fragments mend; 2 from outer fragment & support dowel fragm
800.04	Lot 58	10/17/94	1	housekeeping	tin	can base		2 1/2" diameter, encrusted w/corrosion
800.04	Lot 58	10/17/94	3	housekeeping	tin	can fragment		encrusted w/corrosion, probably can base fragments
800.04	Lot 58	9/14/94	1	housekeeping	wood	barrel lid half		beveled edge; burned top "...MAN(R)"; cut articulation w/squa
800.04	Lot 58	9/14/94	2	housekeeping	wood	barrel stave fragme		curved; broken
800.04	Lot 58	1/12/95	5	housekeeping	wood	clothes		5" long; 3/4" diameter, flat heads
800.04	Lot 58	9/14/94	2	housekeeping	wood	clothes pin		shaker design
800.04	Lot 58	9/15/94	4	housekeeping	wood	clothes pin		shaker design
800.04	Lot 58	9/14/94	10	housekeeping	wood	clothes pin fragmen		shaker design
800.04	Lot 58	9/15/94	7	housekeeping	wood	clothes pin fragmen		shaker design
800.04	Lot 58	9/15/94	1	housekeeping	wood	match stick		unused; no sulpher
800.04	Lot 58	9/15/94	2	housekeeping	wood	match stick		1 end burnt
800.04	Lot 58	1/12/95	2	housekeeping	wood	match stick		burned tips
800.04	Lot 58	11/17/94	1	jewelry	Cu alloy	circlet		1/2" diameter, stamped/embossed circle - probable jewelry
800.04	Lot 58	11/22/94	1	jewelry	Cu alloy	ring		* 5/8" diameter, 1/16" thick, cracked, probably jewelry
800.04	Lot 58	1/10/95	1	jewelry	Cu alloy	ring w/stone		cracked; small size ring; poor condition

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	11/17/94	1	jewelry	Cu alloy/glass	decorative disc		black faceted glass in Cu alloy setting, broken
800.04	Lot 58	2/08/95	2	jewelry	bone/glass	circlet		3/8" oval bone; 3/8" oval glass; possible jewelry related
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		1/2" diameter, round, black glass, central hole
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		1/4" diameter, faceted, tubular, clear glass, central hole
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		3/16" diameter, faceted, tubular, clear glass, central hole
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		3/8" diameter, faceted, 6 sided, clear green, central hole
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		3/8" diameter, round, black glass, central hole
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		5/32" diameter, faceted, tubular, teal blue, central hole
800.04	Lot 58	11/17/94	1	jewelry	glass	bead		7/8" long, barrel shaped, black glass, central hole
800.04	Lot 58	11/17/94	2	jewelry	glass	bead		less than 1/8" diameter, opaque white, tiny seed beads
800.04	Lot 58	11/17/94	1	jewelry	glass	inset		3/8" diameter, embossed floral motif, deep green, flat back
800.04	Lot 58	11/17/94	1	jewelry	glass	inset?		1/2" oval, amber/orange, central hole, flat back
800.04	Lot 58	1/12/95	1	jewelry	glass/Cu alloy	earring?		7/16" diameter, teal glass bead w/copper post thru center, w/
800.04	Lot 58	2/08/95	1	jewelry	ivory?	partial ring		5/8" interior diameter; broken in half; possible ring
800.04	Lot 58	11/17/94	1	jewelry	milk glass	bead		5/16" diameter, opaque white, round, central hole
800.04	Lot 58	1/10/95	1	jewelry	white metal	filigree piece		2 1/4" diameter; polychrome painted; red floral/green leaves
800.04	Lot 58	11/28/94	1	jewelry	white metal	unidentified		possible charm?, 5/8" rounded, quatrefoil cut out
800.04	Lot 58	11/17/94	1	jewelry	wood	bead		1/2" diameter, central hole, worn
800.04	Lot 58	11/17/94	1	jewelry	wood	bead		1/4" diameter, 3/16" thick, central hole, worn
800.04	Lot 58	1/10/95	1	lighting rel	Cu alloy	wick holder		2" diameter wick holder & adjuster crank for kerosene/oil lam
800.04	Lot 58	1/20/95	13	lighting rel	glass	chimney		5 1/6" tall; 1 vessel, clear; tapered shoulder
800.04	Lot 58	1/24/95	119	lighting rel	glass	chimney body fragme		clear, thin, chimney fragments
800.04	Lot 58	1/19/95	2	lighting rel	glass	chimney fragment		fragment, 1 vessel, clear, 1 9/32" diameter
800.04	Lot 58	1/19/95	2	lighting rel	glass	chimney rim		1 vessel, clear, straight finished lip; champagne shoulder
800.04	Lot 58	1/19/95	1	lighting rel	glass	crystal prism		clear; pressed starburst dec; from light/chandelier
800.04	Lot 58	1/20/95	3	lighting rel	glass	unident		1 object, clear, s-shaped, cicrcular, possibly candlestick/fu
800.04	Lot 58	1/19/95	3	lighting rel	glass	unident fragment		2 fragments mend; clear; s-shaped; circular
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	cap?		possible cap to writing implement/paint brush
800.04	Lot 58	11/22/94	1	misc hardware	Cu alloy	disc		* 1" diameter flat, thin disc
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	fastener		1/4" long, rivet?, round head, smooth shank, clock/furniture
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	fastener?		4" long, w/dial/knob and movable catch, nail holes each end
800.04	Lot 58	11/17/94	2	misc hardware	Cu alloy	fragment		probably container base, possibly hardware related
800.04	Lot 58	11/17/94	3	misc hardware	Cu alloy	fragment		1/2" wide, stamped fragments, unknown
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	gasket/flange		11/16" diameter, 7/16" high, open one end, 3/8" hole at other
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	hook fragment		3/4" long, possible latch fragment, broken
800.04	Lot 58	11/17/94	5	misc hardware	Cu alloy	pipe fragment		3/8" diameter, thin copper tubing, possible gas related
800.04	Lot 58	11/17/94	29	misc hardware	Cu alloy	pipe fragment		broken, corroded, thin-walled pipe/tube fragment
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	pipe section		1" diameter, 1 3/4" long section, cracked lengthwise

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	1/10/95	1	misc hardware	Cu alloy	pulley wheel		1 1/2" diameter; 1/4" thick
800.04	Lot 58	11/22/94	1	misc hardware	Cu alloy	ring		* 1 7/16" diameter 3/16" thick, rounded brass ring
800.04	Lot 58	1/10/95	4	misc hardware	Cu alloy	ring fragment		Cu alloy; broken in 4 pieces; badly corroded
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	strip		3/4" wide, broken flat strip
800.04	Lot 58	11/28/94	1	misc hardware	Cu alloy	strip/plate		3 1/8" x 1 1/2", unknown use
800.04	Lot 58	11/17/94	7	misc hardware	Cu alloy	strips		3/32" square shank strips
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	thumbtack		7/16" diameter, flat head broken shank - thumbtack
800.04	Lot 58	11/17/94	3	misc hardware	Cu alloy	unidentified		worked Cu alloy round objects, 1 maybe a cap
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy	wire fragment		Cu alloy wire twisted into oval loop
800.04	Lot 58	11/17/94	2	misc hardware	Cu alloy	wire fragment		tiny pieces Cu alloy wire or stright pin
800.04	Lot 58	11/17/94	1	misc hardware	Cu alloy/iron	pipe/tube		copper sheathed iron pipe/tube, iron badly corroded
800.04	Lot 58	11/28/94	1	misc hardware	Cu alloy/iron	pulley/gear		badly corroded iron pipe, Cu alloy pulley or gear
800.04	Lot 58	1/12/95	2	misc hardware	ceramic	door knob fragment		agateware door knob fragments
800.04	Lot 58	11/28/94	1	misc hardware	iron	bar section		"T" shaped, possible frame fragment, corroded
800.04	Lot 58	11/28/94	3	misc hardware	iron	cap fragment		corroded; round w/holes; lid/cap/drain strainer?
800.04	Lot 58	11/28/94	3	misc hardware	iron	container fragment		very corroded, possible container fragments
800.04	Lot 58	11/28/94	2	misc hardware	iron	grate fragment		possible iron grate fragments, very corroded
800.04	Lot 58	11/28/94	1	misc hardware	iron	pipe fragment		probable pipe section, very corroded
800.04	Lot 58	11/28/94	1	misc hardware	iron	rod fragment		square cut, broken rod fragments, corroded
800.04	Lot 58	11/28/94	2	misc hardware	iron	sheet fragment		sheet metal, very corroded
800.04	Lot 58	11/28/94	1	misc hardware	iron	spike		over 4" long, bent, probable spike, corroded
800.04	Lot 58	11/28/94	1	misc hardware	iron	strap fragment		1 3/8" wide squared end, broken, corroded
800.04	Lot 58	11/28/94	1	misc hardware	iron	strap fragment		3/4" wide, bent, heavily corroded/encrusted
800.04	Lot 58	11/28/94	3	misc hardware	iron	strip		corroded iron strips
800.04	Lot 58	11/28/94	1	misc hardware	iron	unidentified		1/2" diameter; very corroded, possible pipe fragment
800.04	Lot 58	11/28/94	1	misc hardware	iron	unidentified		2 1/2" round, flat, possible lid/cap/base
800.04	Lot 58	11/28/94	1	misc hardware	iron	wide/hook		bent wire or wire hook, heavily corroded
800.04	Lot 58	11/28/94	1	misc hardware	iron	wire fragment		1" section thin iron wire, corroded
800.04	Lot 58	1/24/95	1	misc hardware	leather	unident		spoon -shaped fragment, hole in "handle"
800.04	Lot 58	11/28/94	17	misc hardware	porcelain	doorknob fragment		parts of at least 3 plain, rounded doorknobs
800.04	Lot 58	2/08/95	1	misc hardware	porcelain	doorknob fragment		white exterior; soft paste doorknob fragment
800.04	Lot 58	1/12/95	1	misc hardware	porcelain	keyhole cover		2 1/2" long; tear drop shape w/hole for swing attachment
800.04	Lot 58	1/12/95	1	misc hardware	porcelain	knob		1 5/8" diameter; 1" high; undecorated. white porcelain, possi
800.04	Lot 58	11/28/94	1	misc hardware	rubber	hose fragment		possible hose fragment
800.04	Lot 58	11/28/94	5	misc hardware	white metal	strip		thin broken strips, zinc or lead
800.04	Lot 58	11/28/94	2	misc hardware	wood/iron	handle fragment		corroded/encrusted, partial handle
800.04	Lot 58	11/17/94	30	misc metal	Cu alloy	fragment		corroded, unidentifiable fragments
800.04	Lot 58	2/08/95	1	misc metal	Cu alloy	fragment		similar shape & size to zipper pull

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	9/13/94	1	misc metal	iron	fragment		round; possible tack fragment
800.04	Lot 58	11/28/94	1	misc metal	iron	fragment		1 1/8" long, square cut small shaft, possible nail?
800.04	Lot 58	12/15/94	351	misc metal	iron	fragment		corroded; encrusted; many may be construction related
800.04	Lot 58	2/08/95	1	misc metal	iron/Cu alloy	corrosion chunk		Cu alloy remnant or impression of button in iron corrosion
800.04	Lot 58	11/28/94	1	misc metal	lead	disc		@ 3/4", rounded, flat disc; unknown use
800.04	Lot 58	11/28/94	1	misc metal	lead	fragment		roughly pointed; broken at 1" length
800.04	Lot 58	11/28/94	2	misc metal	lead	strip		curved, slightly rounded lead strips
800.04	Lot 58	10/17/94	3	miscellaneous	charred wood	fragment		charred/partially burned
800.04	Lot 58	10/17/94	2	miscellaneous	cinder	fragment		iron stained
800.04	Lot 58	10/17/94	7	miscellaneous	coal	fragment		small pieces anthracite
800.04	Lot 58	1/26/95	3	miscellaneous	coal	fragment		partially burnt
800.04	Lot 58	11/28/94	1	miscellaneous	dressed wood	fragment		roughly oval w/center hole; possible button?
800.04	Lot 58	1/24/95	5	miscellaneous	fabric	pressed fragment		flat green, pressed fabric fragments; possible felt or a simi
800.04	Lot 58	1/24/95	11	miscellaneous	fabric	pressed fragment		pressed fabric fragment; possibly felt or similar material
800.04	Lot 58	10/17/94	2	miscellaneous	floral	seed fragment		possible marsh plant/reed fragments
800.04	Lot 58	1/19/95	3	miscellaneous	glass	fragment		clear, 2 fragments, burnt & melted, 1 fragment thick, uneven,
800.04	Lot 58	2/08/95	1	miscellaneous	hard rubber	unidentified		1" long broken; square cross section; possible comb part?
800.04	Lot 58	1/26/95	6	miscellaneous	leather	fragment		weathered; 1 fragment layered; 1 fragment bound
800.04	Lot 58	1/26/95	2	miscellaneous	leather	strip fragment		cut leather strips
800.04	Lot 58	10/17/94	3	miscellaneous	mica	fragment		probably muscovite/mica fragments
800.04	Lot 58	9/14/94	1	miscellaneous	rawhide	fragment		
800.04	Lot 58	11/28/94	2	miscellaneous	rubber	band fragment		pieces thin, pliable rubber
800.04	Lot 58	2/08/95	1	miscellaneous	rubber	curved strip		pliable, gray-white color
800.04	Lot 58	2/08/95	1	miscellaneous	rubber	fragment		broken, dessicated; square corner; possible eraser?
800.04	Lot 58	1/26/95	1	miscellaneous	rubber	unident		round; ca 1/4" thick in center; beveled edges; used between 2
800.04	Lot 58	10/17/94	30	miscellaneous	slag	fragment		furnace waste
800.04	Lot 58	12/15/94	17	miscellaneous	slag	fragment		metallic w/pebbles, glass, bone etc
800.04	Lot 58	10/17/94	3	miscellaneous	slate	cut fragment		possible roofing tile or writing board fragments
800.04	Lot 58	10/17/94	2	miscellaneous	vulcanized rubber	cut fragment		1/4" wide cut strip fragments, unknown use
800.04	Lot 58	9/14/94	20	miscellaneous	wood	branch fragment		split lengthwise; associated bark present; possible branch or
800.04	Lot 58	11/28/94	1	miscellaneous	wood	cut section		@ 1 1/8", round, 1" long, cut section of branch-furniture rel
800.04	Lot 58	9/14/94	1	miscellaneous	wood	dowel fragment		3/16" diameter; cracked in middle; cut on 1 end
800.04	Lot 58	9/14/94	1	miscellaneous	wood	dressed fragment		11/32" thick, curved; crescent shaped fragment; ends cut off
800.04	Lot 58	9/14/94	2	miscellaneous	wood	dressed fragment		burnt
800.04	Lot 58	9/14/94	2	miscellaneous	wood	dressed fragment		spool shaped fragment; split lenghtwise; hole thru center; on
800.04	Lot 58	9/14/94	60	miscellaneous	wood	dressed fragment		broken/weathered; possible construction/furniture related
800.04	Lot 58	9/15/94	1	miscellaneous	wood	dressed fragment		grooved side; rounded edge; 1 3/16" wide; 1/2" thick
800.04	Lot 58	9/15/94	1	miscellaneous	wood	dressed fragment		square, tappered plug (?); hole punched in one side

800.04	Lot 58	9/14/94	1	miscellaneous	wood	dressed wood		semi-circular fragment; iron nail fragment on flat edge & sid
800.04	Lot 58	9/14/94	7	miscellaneous	wood	dressed wood		long, semi-circular fragments, cut lenghtwise; 6 w/dressed en
800.04	Lot 58	9/14/94	1	miscellaneous	wood	fragment		knarled, tree branch fragment w/associated iron corrosion
800.04	Lot 58	9/14/94	1	miscellaneous	wood	fragment		weathered
800.04	Lot 58	9/14/94	6	miscellaneous	wood	fragment		partially burned
800.04	Lot 58	9/15/94	1	miscellaneous	wood	fragment		broken/weathered; bark on fragment; split lengthwise
800.04	Lot 58	9/15/94	1	miscellaneous	wood	fragment		
800.04	Lot 58	9/15/94	3	miscellaneous	wood	fragment		burnt
800.04	Lot 58	9/15/94	9	miscellaneous	wood	fragment		broken/weathered
800.04	Lot 58	10/17/94	14	miscellaneous	wood	fragment		gnarl, twigs, bark fragments
800.04	Lot 58	2/08/95	1	miscellaneous	wood	unidentified		sharpened?; point of partial shaft
800.04	Lot 58	11/22/94	1	personal	Cu alloy	cane tip?		* 1 5/8" long, slightly flattened, possible cane tip
800.04	Lot 58	11/28/94	1	personal	Cu alloy	fan rib		5/16" wide; drilled hole one end, possible fan rib
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 2 1/2" long, oval bow 1"; fair condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 2 3/4" long, oval bow 1"; good condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 2 7/8" long, oval bow 7/8", fair condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 3 1/4" long, oval bow 1 1/8" fair condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 3 3/8" long, oval bow 1 1/4", good condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 3" long, broken oval bow, fair condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* 3" long, round bow 1 1/8", smooth shank, fair condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* @ 2 3/4" long, broken oval bow 1"; fair condition
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* key bow only, 1 1/8" oval
800.04	Lot 58	11/22/94	1	personal	Cu alloy	key		* partial key, oval bow 1 1/8", missing teeth
800.04	Lot 58	1/10/95	1	personal	Cu alloy	key		3 1/2" long; oval bow 1 1/8"; good condition
800.04	Lot 58	11/17/94	1	personal	bone	toothbrush		6 3/8" long, 4 rows bristle holes, carved & polished, in 2 pi
800.04	Lot 58	11/17/94	1	personal	glass	mirror		1 3/8" round, possible pocket or compact mirror
800.04	Lot 58	1/12/95	1	personal	vulcanized rubber	comb portion	1851 p	"..(?)..R. COMB CO. GOODYEAR'S PATENT", black hard rubber; 7/
800.04	Lot 58	1/12/95	1	personal	vulcanized rubber	comb portion	1851 p	"...ENT MAY 6 1851" curved, ladies' hair comb, black; 3/4" te
800.04	Lot 58	1/12/95	1	personal	vulcanized rubber	comb portion	1851 p	"I.R. COMB CO. GOODYEAR'S PATENT"; black hard rubber; 7/8" te
800.04	Lot 58	11/17/94	1	personal	vulcanized rubber	comb section		black scalloped frame, 3/4" long tooth decorative comb
800.04	Lot 58	11/17/94	2	personal	vulcanized rubber	comb section		black plain curved frame, 3/4" long teeth, decorative comb

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	11/17/94	2	personal	vulcanized rubber	comb section		black rolled curved frame, 3/4" long teeth, decorative comb
800.04	Lot 58	2/08/95	1	personal	wood	toothpick		1.8"long; good condition
800.04	Lot 58	1/31/95	3	pipe	earthenware	bowl fragment		fragments; mend; glazed; botton of bowl is fluted; scooped in
800.04	Lot 58	1/31/95	1	pipe	hard rubber/cellulo	mouth piece		2 5/16" long; beveled lip; knawled; beveled & threaded at oth
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		65% complete; alternate fluting & raised line decoration; bro
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		85% complete; alternate fluted & raised, line decoration; rou
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		90% complete; small; undecorated; cracked
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		complete; alternate fluting & raised line decoration; spur; b
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		complete; rouletted rim; stamp of human figure above stem
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		small; complete; rouletted seam; 3 flutes w/raised dots above
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		stamped trademark "W" over "II" above stem
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl		undecorated; spur
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl draw fragment		broken spur on underside of stem; raised star decoration on b
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl draw fragment		spur; raised line & fluting decoration on base of bowl; bande
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl draw fragment		undecorated; spur on underside of stem
800.04	Lot 58	1/31/95	5	pipe	kaolin	bowl draw fragment		undecorated; 1 stained orange-brown; 1 stained grey
800.04	Lot 58	2/01/95	1	pipe	kaolin	bowl fragment		50% complete; rouletted rim; stained grey & w/corrosion; band
800.04	Lot 58	2/01/95	1	pipe	kaolin	bowl fragment		fluted & raised line decoration w/rouletting on seam
800.04	Lot 58	2/01/95	1	pipe	kaolin	bowl fragment		raised line inside oblong, raised border; banded raised star
800.04	Lot 58	2/01/95	1	pipe	kaolin	bowl fragment		seam is decorated w/rouletting
800.04	Lot 58	2/01/95	1	pipe	kaolin	bowl fragment	1812-50 c	foliate decoration on seam; raised cross-hatching decoration
800.04	Lot 58	2/01/95	2	pipe	kaolin	bowl fragment		1 stained grey; raised fluting decoration
800.04	Lot 58	2/01/95	11	pipe	kaolin	bowl fragment		undecorated; 2 stained grey
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl rim fragment		foliated decoration on seam; long flutes around bowl; spur br
800.04	Lot 58	1/31/95	1	pipe	kaolin	bowl rim fragment		raised, wavey line at rim; banded raised dot decoration benea
800.04	Lot 58	1/31/95	6	pipe	kaolin	bowl rim fragment		undecorated; 1 with associated matrix
800.04	Lot 58	2/01/95	2	pipe	kaolin	bowl rim fragment		alternate fluted & raised line decoration on botton of bowl
800.04	Lot 58	2/01/95	5	pipe	kaolin	bowl rim fragment		rim have pressed, rouletted decoration; 4 stained w/various s
800.04	Lot 58	1/31/95	2	pipe	kaolin	bowl/stem		1 pipe; basket decoration on top; molded hand cupping bowl un
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		"GAMBIER PARIS" square stamp; top of "M" and "M" or "H" vis
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		"PETER DORNI" 1/2 of name in fragment, surrounded by roulette
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		fragment shows 6 bands of rouletting
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		red/brown glaze; spur
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		rouletted band decoration (2); 2 bands of raised dot decorati
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		small split fragment; rouletted bands decoration
800.04	Lot 58	10/31/94	1	pipe	kaolin	stem fragment		undecorated; light grey exterior; dark grey interior
800.04	Lot 58	10/31/94	2	pipe	kaolin	stem fragment		"PETER DORNI" foliated decoration next to bowl; rouletted ban
800.04	Lot 58	10/31/94	2	pipe	kaolin	stem fragment		heavily weathered foliate decoration; possible "PETER DORNI"

800.04	Lot 58	1/31/95	1	pipe	kaolin	stem fragment		banded rouletting; embossed "PETER" "DORNI"; flutes on stem p
800.04	Lot 58	1/31/95	1	pipe	kaolin	stem fragment		banded, rouletting; 2 rows; raised star decoration
800.04	Lot 58	1/31/95	1	pipe	kaolin	stem fragment		raised letters: "...ACE & CO" on left; "IN G..." on right
800.04	Lot 58	1/31/95	1	pipe	kaolin	stem fragment		rouletting curling to become alternate raised line & fluting
800.04	Lot 58	1/31/95	1	pipe	kaolin	stem fragment		rouletting; 3 raised bands around stem; raised "C.P." on righ
800.04	Lot 58	1/31/95	1	pipe	kaolin	stem fragment		rouletting; banded; raised dot decoration
800.04	Lot 58	2/01/95	1	pipe	porcelain	chamber		"nicotine reciver" between bowl & mouth piece; patent lip; fi
800.04	Lot 58	11/17/94	3	sewing rel	Cu alloy	straight pin		1 is 1" long with head, 2 are fragments
800.04	Lot 58	11/17/94	11	sewing rel	Cu alloy	thimble fragment		embossed/stamped crushed thimble fragments
800.04	Lot 58	11/22/94	4	sewing rel	Cu alloy	thimble fragment		* very deteriorated/corroded fragments
800.04	Lot 58	9/15/94	2	sewing rel	wood	spool		V-shaped rim on ends; 1 spool is rouletted on 1 end
800.04	Lot 58	9/15/94	4	sewing rel	wood	spool		1 spool broken into quarters; edge worn down
800.04	Lot 58	9/15/94	2	sewing rel	wood	spool fragment		1 object; misshapen/weathered
800.04	Lot 58	10/17/94	94	shell	clam	fragment		sample, hard shell clam fragments
800.04	Lot 58	10/17/94	30	shell	clam	whole		whole halves, hard shell clam
800.04	Lot 58	10/17/94	8	shell	mussel	whole/fragments		1 whole half, 7 fragments
800.04	Lot 58	1/26/95	29	shell	mussel shell	fragment		probable same shell
800.04	Lot 58	10/17/94	18	shell	oyster	fragment		sample
800.04	Lot 58	10/17/94	37	shell	oyster	whole		whole halves
800.04	Lot 58	10/17/94	1	shell	scallop	fragment		hinge fragment
800.04	Lot 58	10/17/94	1	shell	slipper	whole		possible atlantic slipper shell-fragile
800.04	Lot 58	10/17/94	1	shell	unident	fragment		smooth white fragment, possible weathered clam
800.04	Lot 58	11/28/94	2	spec activity	bone	carved fragment		cylindrical, possible pipe stem/writing or sewing related
800.04	Lot 58	2/08/95	1	spec activity	bone/ivory?	carved fragment		1/4" wide strip w/evenly spaced holes; decorative/gameboard?
800.04	Lot 58	2/08/95	1	spec activity	buff earthenware	unidentified		unglazed; porous; wheel-like; 2" diameter; 3/4" thick w/cente
800.04	Lot 58	1/12/95	1	spec activity	glass	beveled circle		1 1/16" diameter, beveled one side around edge-watch/locket/e
800.04	Lot 58	1/12/95	2	spec activity	glass	circle		mend, 1 3/8" diameter, rough cut edge-watch/locket/eyeglass?
800.04	Lot 58	1/12/95	1	spec activity	glass	lens		1 5/32"diameter; round, clear glass lens-personal/scientific/
800.04	Lot 58	2/08/95	2	spec activity	horn	unident		hollowed out horn sections; possibly polished; unknown use
800.04	Lot 58	11/28/94	2	spec activity	lead	printing slug		7/18" long; possible pieces of movable type?
800.04	Lot 58	11/28/94	1	spec activity	milk glass	coin		fragment of liberty head cent, facsimile in gilt over milk gl
800.04	Lot 58	2/08/95	2	spec activity	unident	molded fragment		possible celluloid? ceramic-like, 1 orange painted, 1 black
800.04	Lot 58	9/15/94	1	spec activity	wood	awl handle		probably awl; metal "collar" at base

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	2/08/95	1	spec activity	wood?	unidentified		1 1/2" long lathe-turned shaft w/broken 1 1/8" diameter round
800.04	Lot 58	1/19/95	1	table glass	glass	body fragment		clear, convex fluting on fragment exterior; faceted
800.04	Lot 58	1/19/95	1	table glass	glass	body fragment		clear, pressed glass, unident pattern
800.04	Lot 58	1/19/95	1	table glass	glass	body fragment		clear; pressed tear-drop shaped flute w/ridged borded on ext
800.04	Lot 58	1/19/95	1	table glass	glass	body fragment		clear; raised ridge w/impressed diamond pattern to one side
800.04	Lot 58	1/19/95	2	table glass	glass	body fragment		clear, impressed diamond pattern; undecorated borded on 1 sid
800.04	Lot 58	1/19/95	2	table glass	glass	body fragment		possibly tumbler; clear; 2 rows of pressed flutes
800.04	Lot 58	1/19/95	3	table glass	glass	body fragment		clear; impressed diamond pattern, bordered on 1 side by flute
800.04	Lot 58	1/20/95	7	table glass	glass	dish		1 vessel; 85% complete; clear pressed starburst decoration on
800.04	Lot 58	1/19/95	1	table glass	glass	dish rim		clear, alternate scalloped & pointed dec on rim, pressed ridg
800.04	Lot 58	1/19/95	1	table glass	glass	dish rim fragment		clear, flanged lip w/raised dots on upper surface, impressed
800.04	Lot 58	1/19/95	1	table glass	glass	final		clear; tapered hexagonal top; down sloped, hexagonal knop; be
800.04	Lot 58	1/19/95	1	table glass	glass	handle fragment		clear, seamed
800.04	Lot 58	1/19/95	1	table glass	glass	lid fragment		clear; geometric lid fragments w/beveled underside
800.04	Lot 58	1/19/95	1	table glass	glass	rim fragment		clear, thumb print block decoration, abrupt rim
800.04	Lot 58	1/19/95	1	table glass	glass	stemware bowl		fragment, clear, undecorated bowl; beveled collar
800.04	Lot 58	1/19/95	2	table glass	glass	stemware bowl		1 vessel; clear, sectional block fluted on bowl; beveled coll
800.04	Lot 58	1/19/95	2	table glass	glass	stemware foot		1 vessel; clear; rounded foot rim; beveled, octagonally flute
800.04	Lot 58	1/20/95	4	table glass	glass	stemware foot fragm		clear, rounded edge; 2 w/abrupt heel
800.04	Lot 58	1/19/95	1	table glass	glass	stemware fragment		collar/step; clear
800.04	Lot 58	1/19/95	1	table glass	glass	stemware knop		clear, rounded knop
800.04	Lot 58	1/19/95	2	table glass	glass	tumbler		1 vessel; 75% complete, clear; straight-finished lip; flat in
800.04	Lot 58	1/19/95	3	table glass	glass	tumbler		1 vessel, 30% complete; clear, sectional block, shingled, flu
800.04	Lot 58	1/19/95	5	table glass	glass	tumbler		1 vessel, 95% complete, flosted, no tint, flat indentation ba
800.04	Lot 58	1/20/95	1	table glass	glass	tumbler		40% complete; clear, octagonal base w/abrupt heel, 8 flutes o
800.04	Lot 58	1/20/95	2	table glass	glass	tumbler		1 vessel: 50% complete; clear, hexagonal base, faceted; chamf
800.04	Lot 58	1/20/95	2	table glass	glass	tumbler		1 vessel; 75% complete; clear, octagonal base; rounded, strai
800.04	Lot 58	1/20/95	20	table glass	glass	tumbler		1 vessel; 95% complete; clear straight finished lip; pressed
800.04	Lot 58	1/19/95	2	table glass	glass	tumbler base		same vessel, clear, 9 facets on body; chamfered heel; flat, i
800.04	Lot 58	1/19/95	1	table glass	glass	tumbler rim		fragment, clear, rounded, undecorated lip, ridged rim w/raise
800.04	Lot 58	1/19/95	2	table glass	glass	tumbler rim		fragments, clear, rounded lip, fluted body, seam present
800.04	Lot 58	1/19/95	5	table glass	glass	tumbler rim		fragments, clear, rounded lip, undecorated rim, fluted body
800.04	Lot 58	11/28/94	1	textile	cloth	fragment		felt? burlap? stained w/iron corrosion
800.04	Lot 58	11/28/94	7	textile	cloth	fragment		pieces of woven fabric, stained
800.04	Lot 58	1/24/95	2	textile	cloth	wooven fragment		black cloth w/fine, wooven thread; nearly shear
800.04	Lot 58	1/24/95	2	textile	cloth	wooven fragment		course, wooven cloth; possible cotton thread
800.04	Lot 58	1/24/95	2	textile	cloth	wooven fragment		flat green, wooven cloth
800.04	Lot 58	1/24/95	7	textile	cloth	wooven fragment		black wooven fragment w/ridged (reinforced?) pattern

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
800.04	Lot 58	1/24/95	1	textile	cloth	woven fragment		attached corrosion from iron
800.04	Lot 58	1/24/95	1	textile	cloth	woven fragment		possible cotton; stitched & hemmed fragment
800.04	Lot 58	1/24/95	78	textile	cloth	woven fragment		heavily weathered
800.04	Lot 58	9/26/94	1	token	Cu alloy	Army-Navy token	1863	capped Liberty
800.04	Lot 58	9/26/94	1	token	Cu alloy	No Slavery token	1863	capped Liberty, "LIBERTY AND NO SLAVERY"
800.04	Lot 58	9/26/94	1	token	Cu alloy	Union Flour token	n/a	no date
800.04	Lot 58	12/20/94	1	toy	bisque porcelain	doll foot		bisque; painted black foot w/red laces, broken @ ankle
800.04	Lot 58	12/20/94	2	toy	bisque porcelain	doll leg fragment		undecorated, hollow leg fragments
800.04	Lot 58	1/12/95	1	toy	bone/ivory	domino		1 3/4" x 7/8" no. 2 domino tile w/3 holes for copper rivets
800.04	Lot 58	10/12/94	1	toy	clay	marble		11 mm diameter, undecorated
800.04	Lot 58	10/12/94	1	toy	clay	marble		12 mm diameter, undecorated
800.04	Lot 58	10/12/94	1	toy	clay	marble		16 mm diameter, red clay, undecorated
800.04	Lot 58	10/12/94	1	toy	clay	marble		26 mm diameter, undecorated, pitted
800.04	Lot 58	10/12/94	4	toy	clay	marble		13 mm diameter, undecorated

9.02	Lot 58	12/21/94	30	construction rel	window glass	fragment		translucent; pale green tint
9.02	Lot 58	12/21/94	67	construction rel	window glass	fragment		translucent; slight green tint; cloudy discoloration due to d
9.02	Lot 58	2/21/95	1	dec furnishing	milk glass	corner fragment		opaque white milk glass corner/shoulder fragment
9.02	Lot 58	12/21/94	1	faunal	bird bone	fragment		possible long bone; split lengthwise
9.02	Lot 58	12/21/94	1	faunal	fish bone	vertebra		broken/weathered
9.02	Lot 58	12/21/94	1	faunal	mammal bone	calcaneus		
9.02	Lot 58	12/21/94	1	faunal	mammal bone	cut fragment		cut/saw marks on both ends; 1/2" wide
9.02	Lot 58	12/21/94	1	faunal	mammal bone	cut fragment		cut/saw marks; bone in beginning to flake
9.02	Lot 58	12/21/94	10	faunal	mammal bone	fragment		broken/weathered
9.02	Lot 58	12/21/94	1	faunal	mammal bone	phalanx		first phalanx; possible rodent; ca. 3/4" long
9.02	Lot 58	12/21/94	9	faunal	mammal bone	rib fragment		bright, 3 left; broken/weathered
9.02	Lot 58	12/21/94	1	faunal	mammal bone	vertebra		thorasic; broken/weathered
9.02	Lot 58	12/21/94	1	faunal	unident bone	vertebra fragment		small; broken/weathered
9.02	Lot 58	12/21/94	1	misc hardware	Cu alloy	sheet fragment		1/4" wide; thin, bent, tapered to point on one end
9.02	Lot 58	12/21/94	1	misc hardware	Cu alloy	tack		round head; round shank tapering to square; ca 1 1/4" long
9.02	Lot 58	12/21/94	1	misc hardware	Cu alloy	unident		cube on ring w/hole through middle; posible threads; corroded
9.02	Lot 58	12/21/94	1	misc hardware	iron	bar fragment		iron, square bar; bent at approx 90 degree angle & broken
9.02	Lot 58	12/21/94	49	misc hardware	iron	sheet fragment		corroded
9.02	Lot 58	12/21/94	1	misc hardware	iron	spike		corroded; square head & shank
9.02	Lot 58	12/21/94	1	misc metal	Cu alloy	unident		ridged, flat Cu alloy fragment, encrusted & corroded on botto
9.02	Lot 58	12/21/94	11	misc metal	iron	lumps		corroded lumps
9.02	Lot 58	12/21/94	7	miscellaneous	cinder	fragment		
9.02	Lot 58	12/21/94	1	miscellaneous	coal	fragment		partially burnt

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
9.02	Lot 58	12/21/94	2	miscellaneous	coal	fragment		unburnt
9.02	Lot 58	12/21/94	2	miscellaneous	glass	blob		melted
9.02	Lot 58	12/21/94	24	miscellaneous	slag	fragment		metallic
9.02	Lot 58	12/21/94	1	miscellaneous	slate	fragment		black, thin
9.02	Lot 58	12/21/94	1	personal	Cu alloy	cane tip		conical piece w/rounded tip hollow w/wood fragments inside, c
9.02	Lot 58	12/21/94	1	pipe	kaolin	bowl fragment		undecorated
9.02	Lot 58	12/21/94	6	pipe	kaolin	stem fragment		undecorated; one stained green; one w/part of spur
9.02	Lot 58	12/21/94	90	shell	clam	fragment		hardshell clam
9.02	Lot 58	12/21/94	2	shell	clam	whole half		hardshell clam
9.02	Lot 58	12/21/94	6	shell	mussel	fragment		
9.02	Lot 58	12/21/94	65	shell	oyster	fragment		
9.02	Lot 58	12/21/94	7	shell	oyster	whole half		
9.02	Lot 58	12/21/94	1	shell	slipper	whole		small, ca 1/2" long
9.02	Lot 58	2/21/95	1	shell	unident	fragment		possible egg shell fragment
9.02	Lot 58	12/21/94	1	utensil	iron	handle		rounded base; broken; badly corroded
9.02	Lot 58	12/21/94	1	writing rel	unident	pen fragment		conical, non-magnetic tube w/raised band & interior, hollow t
11.01	Lot 59	11/07/94	1	bottle/container	glass	finish	1903 p	clear glass, automatic machine made, pint liquor finish
11.01	Lot 59	11/07/94	1	*ceramic*	*ironstone*	handle	1850	embossed handle to large vessel
11.01	Lot 59	11/07/94	1	clothing rel	mother-of-pearl	button		1/2" diameter, 4-hole inset, flat back, weathered
11.01	Lot 59	11/07/94	1	misc hardware	iron	section		unidentified hardware-scale part, utensil, horse tack?
11.01	Lot 59	11/07/94	1	toy	clay	marble		19 mm diameter, undecorated
11.01	Lot 59	11/07/94	1	toy	stoneware	marble		29 mm diameter, partially glazed, pitted
12.01	Lot 59	11/07/94	1	bottle/container	glass	base	19th C.	pontil scar on base, 1/2" diameter, light green bottle
12.01	Lot 59	11/07/94	1	ceramic	whiteware	base sherd	1850	faded blue floral transfer print, partial mark on base
12.01	Lot 59	11/07/94	1	ceramic	whiteware	base sherd	1850	thick, undecorated & unmarked base sherd
12.01	Lot 59	11/07/94	1	construction rel	plate glass	decorated fragment	20th C.	starburst pattern plate window glass, 5/32" thick
12.02	Lot 59	11/18/94	1	20th C debris	plastic	molded fragment	1930 p	possibly artificial flower petal
12.02	Lot 59	11/18/94	1	bottle/container	glass	base fragment		*light olive tint(?); iridescent due to devitrification*
12.02	Lot 59	11/18/94	3	bottle/container	glass	base fragment		clear
12.02	Lot 59	11/18/94	1	bottle/container	glass	body fragment		clear, faceted
12.02	Lot 59	11/18/94	1	bottle/container	glass	body fragment		cloudy due to vitrification, light olive-brown tint
12.02	Lot 59	11/18/94	1	bottle/container	glass	body fragment		opaque, dark yellow-brown tint
12.02	Lot 59	11/18/94	1	bottle/container	glass	body fragment		translucent, amber tint

12.02	Lot 59	11/18/94	1	bottle/container	glass	rim fragment		translucent, slight pale green tint
12.02	Lot 59	11/18/94	2	bottle/container	glass	rim fragment		clear
12.02	Lot 59	2/14/95	1	ceramic	American Rockingham	body sherd	1812	molded body; mottled brown exterior; clear glaze interior
12.02	Lot 59	2/14/95	1	ceramic	brown stoneware	body sherd		brown mottled salt glaze ext; unglazed int; possible mug
12.02	Lot 59	2/14/95	1	ceramic	brown stoneware	bottle fragment	1820	tan non-salt glazed ext; unglazed int; probable bottle
12.02	Lot 59	2/15/95	2	ceramic	buff earthenware	body spall		buff- pink coarse bodied, 1 with clear glaze on one side
12.02	Lot 59	2/14/95	1	ceramic	buff stoneware	base sherd		clear glazed; buff body; potter's wheel marks on base
12.02	Lot 59	2/14/95	1	ceramic	buff stoneware	base sherd		lustrous dark brown glaze int/ext; underfired; small crock
12.02	Lot 59	2/14/95	2	ceramic	buff stoneware	body sherd		partial brown slip exterior; dark brown slip interior
12.02	Lot 59	2/14/95	1	ceramic	buff stoneware	body spall		remnant brown glaze ext; clear glaze int; spalled
12.02	Lot 59	2/14/95	1	ceramic	buff stoneware	rim sherd		dark brown lustrous salt glaze int/ext; rolled rim; thick
12.02	Lot 59	2/09/95	11	ceramic	creamware	base/body	1762	undecorated; many spalled one side
12.02	Lot 59	2/15/95	1	ceramic	ironstone	base sherd	1850	hard, white paste; gilt band on pedestal footed base exterior
12.02	Lot 59	2/15/95	4	ceramic	ironstone	base sherd	1850	thick; undecorated; hard body; bluish cast to glaze; differen
12.02	Lot 59	2/15/95	30	ceramic	ironstone	body sherd	1850	thick; undecorated; hard body; bluish cast to glaze; few spal
12.02	Lot 59	2/15/95	7	ceramic	ironstone	rim sherd	1850	thick; undecorated; hard body; bluish cast to glaze; differen
12.02	Lot 59	2/15/95	1	ceramic	jackfield	body sherd	1740-1780	purple-red paste; lustrous black/brown glaze int/ext
12.02	Lot 59	2/09/95	11	ceramic	pearlware	base/body	1780	undecorated; some spalled one side
12.02	Lot 59	2/14/95	2	ceramic	pearlware	body sherd	1780	underglaze blue painted; tiny body sherds
12.02	Lot 59	2/09/95	1	ceramic	pearlware	bodyspall	1795	blue transfer print; fish roe motif; spalled interior
12.02	Lot 59	2/09/95	1	ceramic	pearlware	finial sherd	1795	dark blue transfer print; knob-like finial fragment
12.02	Lot 59	2/14/95	1	ceramic	pearlware	plate rim	1780	blue painted shell edge like-no relief; small plate/saucer
12.02	Lot 59	2/09/95	1	ceramic	pearlware	rim sherd	1810	embossed bead rim motif; underglaze blue painted
12.02	Lot 59	2/14/95	2	ceramic	pearlware	rim sherd	1795	underglaze polychrome blue/orange/yellow/brown floral
12.02	Lot 59	2/14/95	4	ceramic	pearlware	rim/body	1795	brown painted tiny sherds; probable underglaze polychrome
12.02	Lot 59	2/14/95	2	ceramic	porcelain	base sherd		undecorated base sherds w/footring; soft paste porcelain

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
12.02	Lot 59	2/14/95	12	ceramic	porcelain	base/body		undecorated soft paste sherds; different vessels
12.02	Lot 59	2/14/95	1	ceramic	porcelain	body sherd		undecorated exterior; pinkish tan int; soft paste, small sher
12.02	Lot 59	2/14/95	1	ceramic	porcelain	body sherd	1800	blue on white decoration; probably Canton/Nanking plate
12.02	Lot 59	2/14/95	1	ceramic	porcelain	rim sherd		black painted landscape ext; pink luster band int rim
12.02	Lot 59	2/14/95	1	ceramic	porcelain	rim sherd		blue on white geometric decoration int; possible Canton?
12.02	Lot 59	2/14/95	1	ceramic	porcelain	rim sherd		pale blue on white decoration int; geometric pattern
12.02	Lot 59	2/14/95	1	ceramic	porcelain	rim sherd		soft paste porcelain; gilt band on int below rim
12.02	Lot 59	2/14/95	4	ceramic	porcelain	rim sherd		undecorated soft paste porcelain; different vessels
12.02	Lot 59	2/14/95	11	ceramic	red earthenware	body sherd		unglazed int/ext; probable flower pot
12.02	Lot 59	2/14/95	1	ceramic	red earthenware	rim sherd		unglazed int/ext; wide rim collar; flower pot
12.02	Lot 59	2/14/95	1	ceramic	red earthenware	rim sherd		unglazed; rolled rim; orange paste; flower pot
12.02	Lot 59	2/14/95	2	ceramic	red earthenware	rim sherd		unglazed int/ext; rolled rim mend; flower pot
12.02	Lot 59	2/14/95	4	ceramic	red earthenware	rim sherd		unglazed; straight rims; 2 different flower pots
12.02	Lot 59	2/14/95	1	ceramic	red slipware	body sherd		trailed white slip & copper splashed decoratrion on interior
12.02	Lot 59	2/14/95	3	ceramic	red slipware	body sherd		trailed white slip decoration on interior
12.02	Lot 59	2/14/95	1	ceramic	redware	body sherd		brown glazed int/ext; ribbed body; brick red paste
12.02	Lot 59	2/14/95	1	ceramic	redware	body sherd		ginger glaze int/ext; small, worn sherd
12.02	Lot 59	2/14/95	1	ceramic	redware	body sherd		partial clear glaze int/ext; incised band ext; thick
12.02	Lot 59	2/14/95	2	ceramic	redware	body sherd		brown mottled dark brown int; thick body
12.02	Lot 59	2/14/95	5	ceramic	redware	body sherd		clear glazed int/ext; thick body; brick red paste
12.02	Lot 59	2/14/95	5	ceramic	redware	body sherd		clear glazed int; unglazed ext; thick body, orange paste
12.02	Lot 59	2/14/95	5	ceramic	redware	body sherd		clear mottled/speckled brown glaze int; unglazed ext
12.02	Lot 59	2/15/95	1	ceramic	redware	body sherd		hard, dark brown body; white slip under pale blue glaze
12.02	Lot 59	2/15/95	1	ceramic	redware	body sherd		hard, dark red body; white glaze int; brown & white glaze ext
12.02	Lot 59	2/15/95	1	ceramic	redware	burned base sherd		base on finial sherd-squared corner; spalled
12.02	Lot 59	2/15/95	1	ceramic	redware	burned body sherd		thick body; burned sherd
12.02	Lot 59	2/14/95	1	ceramic	redware	rim sherd		clear glazed int/ext; thin body; possible cup rim
12.02	Lot 59	2/14/95	1	ceramic	redware	rim sherd		clear mottled brown glaze int/ext; rolled rim
12.02	Lot 59	2/14/95	1	ceramic	redware	rim sherd		spalled brown glaze ext; very thick; rolled rim
12.02	Lot 59	2/14/95	2	ceramic	redware	rim sherd		clear glazed; badly spalled; probable chamber pot rim
12.02	Lot 59	2/15/95	1	ceramic	redware	rim sherd		brick red body; lustrous brown glaze int/ext
12.02	Lot 59	2/14/95	2	ceramic	redware	rim/body		clear mottled brown glaze int; wide mouth; everted rim
12.02	Lot 59	2/14/95	5	ceramic	redware	rim/body		dark brown glaze int/ext; thin body; orange paste
12.02	Lot 59	2/14/95	1	ceramic	stoneware	body sherd		lustrous dark brown non-salt glazed int/ext; gray body
12.02	Lot 59	2/14/95	2	ceramic	stoneware	body sherd		gray body; brown non-salt glazed ext; unglazed int
12.02	Lot 59	2/14/95	2	ceramic	stoneware	body sherd		gray salt glaze ext; 1 with brown sli interior
12.02	Lot 59	2/14/95	2	ceramic	stoneware	body sherd		mottled brown salt glazed ext; brown slip interior
12.02	Lot 59	2/15/95	1	ceramic	stoneware	body sherd		brown non-salt glazed ext; pink-tan slip int

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
12.02	Lot 59	2/15/95	1	ceramic	stoneware	body sherd		brown non-salt glazed ext; unglazed int; gray body
12.02	Lot 59	2/15/95	2	ceramic	stoneware	body sherd		glay salt glazed; cobalt blue decoration
12.02	Lot 59	2/15/95	1	ceramic	stoneware	handle sherd		molded fragment; thick, gray-brown salt-glazed handle fragmen

903	Lot 59	11/04/94	2	ceramic	redware	body sherd		brown glaze int/ext
903	Lot 59	11/04/94	1	ceramic	stoneware	base spall		gray body orange slip/glaze int/ext
903	Lot 59	11/04/94	1	ceramic	stoneware	body sherd		gray paste, unglazed int/ext, burned?
903	Lot 59	11/04/94	1	ceramic	stoneware	body sherd		mottled brown salt glaze ext, brown slip int
903	Lot 59	11/04/94	3	ceramic	white earthenware	rim/handle		burned whiteware or ironstone sherds
903	Lot 59	11/04/94	3	ceramic	whiteware	base sherd	1850	thick body, undecorated
903	Lot 59	11/04/94	9	ceramic	whiteware	base sherd	1820	base sherds w/footrings, undecorated, different vessels
903	Lot 59	11/04/94	4	ceramic	whiteware	base/body	1840	black transfer print, landscape motif, saucer/plate sherds
903	Lot 59	11/04/94	3	ceramic	whiteware	base/rim	1830	annular decoration, 6" diameter bowl, brown/tan/white

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1830	annular decoration, orange & white
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1830	blue floral transfer print w/glit band overglaze
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1830	blue painted, probable annular decorated vessel
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1830	incised lines/green painted
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1840	deep purple transfer print, int/ext; floral motif
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1840	green transfer print, intricate pattern
903	Lot 59	11/04/94	1	ceramic	whiteware	body sherd	1844	flow-blue transfer print, thick body
903	Lot 59	11/04/94	2	ceramic	whiteware	body sherd	1830	polychrome painted green/black/red, floral motif
903	Lot 59	11/04/94	2	ceramic	whiteware	body sherd	1840	black transfer print, badly spalled
903	Lot 59	11/04/94	2	ceramic	whiteware	body sherd	1840	brown transfer prints, 1 geometric, 1 floral
903	Lot 59	11/04/94	2	ceramic	whiteware	body sherd	1850	faded blue transfer transfer prints, floral motifs, thick
903	Lot 59	11/04/94	3	ceramic	whiteware	body sherd	1830	blue transfer print, landscape motifs
903	Lot 59	11/04/94	6	ceramic	whiteware	body sherd	1830	blue transfer print, floral motifs, different vessels
903	Lot 59	11/04/94	12	ceramic	whiteware	body sherd	1850	thick body, undecorated
903	Lot 59	11/04/94	24	ceramic	whiteware	body sherd	1820	undecorated
903	Lot 59	11/04/94	4	ceramic	whiteware	body spall	1830	blue transfer print, badly spalled
903	Lot 59	11/04/94	10	ceramic	whiteware	body spall	1820	undecorated
903	Lot 59	11/04/94	1	ceramic	whiteware	handle	1844	flow-blue transfer print, floral motif handle
903	Lot 59	11/04/94	1	ceramic	whiteware	handle sherd	1830	embossed/molded leaf handle, annular brown & white
903	Lot 59	11/04/94	2	ceramic	whiteware	marley sherd	1830	blue transfer print, geometric & floral motifs
903	Lot 59	11/04/94	1	ceramic	whiteware	rim sherd	1830	polychrome painted green & black on int; small plate/saucer
903	Lot 59	11/04/94	1	ceramic	whiteware	rim sherd	1840	brown transfer print, embossed/molded rim. floral motif
903	Lot 59	11/04/94	1	ceramic	whiteware	rim sherd	1840	brown transfer print, floral motif, molded plate rim
903	Lot 59	11/04/94	1	ceramic	whiteware	rim sherd	1850	thick body, undecorated, ointment/cosmetic jar rim
903	Lot 59	11/04/94	1	ceramic	whiteware	rim sherd	1850 c	blue shell edge decoration, plate rim, burned
903	Lot 59	11/04/94	2	ceramic	whiteware	rim sherd	1830	blue transfer print, 1 geometric motif
903	Lot 59	11/04/94	2	ceramic	whiteware	rim sherd	1850 c	blue shell edge decoration, large plate rim mend
903	Lot 59	11/04/94	5	ceramic	whiteware	rim sherd	1820	undecorated, different vessels
903	Lot 59	11/04/94	2	ceramic	whiteware	rim/base	1850 c	blue shell edge decoration, large plate rim/base mend
903	Lot 59	11/04/94	4	ceramic	whiteware	rim/marley	1830	willow pattern blue transfer print w/gilt band overglaze
903	Lot 59	11/04/94	2	ceramic	whiteware	rim/sherd	1830	annular decoration brown & white
903	Lot 59	11/04/94	2	ceramic	yellowware	base sherd	1845-54	"AMERICAN POTTERY CO. -4- JERSEY CITY NJ" impressed
903	Lot 59	11/04/94	3	ceramic	yellowware	rim/body	1827 p	undecorated, hard body
903	Lot 59	11/01/94	1	clothing rel	milk glass	button		1/2" diameter 4-hole inset
903	Lot 59	11/02/94	1	clothing rel	milk glass	button		1/4" diameter, 4-hole inset
903	Lot 59	11/02/94	2	construction rel	Cu alloy	wire		very thin
903	Lot 59	11/01/94	7	construction rel	brick	fragment		burnt
903	Lot 59	11/02/94	2	construction rel	brick	fragment		

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
903	Lot 59	11/01/94	1	construction rel	cement	fragment		angled ca. 120 degrees
903	Lot 59	11/02/94	1	construction rel	iron	bolt		corroded; square head; threaded
903	Lot 59	11/02/94	12	construction rel	iron	nail		corroded
903	Lot 59	11/02/94	50	construction rel	iron	nail fragment		corroded
903	Lot 59	11/02/94	4	construction rel	iron	sheet fragment		corroded; 3 fragments are strips
903	Lot 59	11/01/94	1	construction rel	mortar	fragment		burnt
903	Lot 59	11/02/94	3	construction rel	unident metal	nail		corroded; non-magnetic metal
903	Lot 59	11/02/94	17	construction rel	unident metal	nail fragment		corroded, non-magnetic metal
903	Lot 59	11/01/94	1	construction rel	window glass	fragment		burnt, clear
903	Lot 59	11/01/94	17	construction rel	window glass	fragment		translucent; green tint
903	Lot 59	11/01/94	22	construction rel	window glass	fragment		slight green tint
903	Lot 59	11/01/94	22	construction rel	window glass	fragment		clear
903	Lot 59	11/02/94	1	construction rel	window glass	fragment		frosted
903	Lot 59	11/01/94	12	faunal	mammal bone	cut fragment		4 rib fragments; cut/saw marks
903	Lot 59	11/02/94	2	faunal	mammal bone	cut fragment		round cut, 1 whole, 1 fragment
903	Lot 59	11/02/94	5	faunal	mammal bone	cut fragment		cut/saw marks; burnt
903	Lot 59	11/02/94	4	faunal	mammal bone	fragment		broken/weathered; burnt
903	Lot 59	11/02/94	9	faunal	mammal bone	fragment		broken/weathered, 6 rib fragments
903	Lot 59	11/01/94	1	faunal	mammal bone	unidentified		epiphysis
903	Lot 59	11/02/94	1	faunal	mammal bone	unidentified		phalanx(?)
903	Lot 59	11/01/94	1	faunal	rodent bone	unidentified		long bone
903	Lot 59	11/01/94	1	misc metal	Cu alloy	cut fragment		cut rectangular fragment w/curled strip attached
903	Lot 59	11/01/94	12	misc metal	iron	fragment		corroded lumps
903	Lot 59	11/01/94	1	misc metal	lead	fragment		tapered, square "peg"
903	Lot 59	11/02/94	6	misc metal	unident metal	fragment		corroded lumps; non-magnetic metal
903	Lot 59	11/02/94	29	miscellaneous	cinder	fragment		furnace debris
903	Lot 59	11/02/94	5	miscellaneous	coal	fragment		unburnt; furnace debris
903	Lot 59	11/02/94	7	miscellaneous	coal	fragment		partially burnt furnace debris
903	Lot 59	11/01/94	16	miscellaneous	slag	fragment		furnace debris
903	Lot 59	11/01/94	3	miscellaneous	stone	cut fragment		thin
903	Lot 59	11/02/94	5	miscellaneous	wood/iron	fragment		corroded strips w/iron tacks placed at regular intervals
903	Lot 59	11/01/94	1	pipe	kaolin	bowl		rouletting along base of bowl & stem
903	Lot 59	11/01/94	1	pipe	kaolin	bowl fragment		foliate & floral (clover) decoration
903	Lot 59	11/01/94	2	pipe	kaolin	bowl fragment		floral decoration on rim; alternate dots decoration in the mi
903	Lot 59	11/01/94	6	pipe	kaolin	stem fragment		undecorated
903	Lot 59	11/02/94	25	shell	clam	fragment		hardshell, clam
903	Lot 59	11/02/94	1	shell	clam	whole half		hardshell, clam
903	Lot 59	11/02/94	20	shell	oyster	fragment		

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
903	Lot 59	11/02/94	21	shell	oyster	whole half		
903	Lot 59	11/02/94	1	table glass	glass	fragment		clear tint; frosty; curved, overhanging lip decoration
906	Lot 59	11/08/94	1	bottle/container	glass	base fragment		cloudy, no tint, faceted
906	Lot 59	11/08/94	3	bottle/container	glass	body fragment		cloudy, no tint
906	Lot 59	11/08/94	3	bottle/container	glass	body fragment		translucent, light aqua tint
906	Lot 59	11/08/94	15	bottle/container	glass	body fragment		clear
906	Lot 59	11/08/94	28	bottle/container	glass	fragment		same vessel, clear, square bottle
906	Lot 59	11/08/94	2	ceramic	buff earthenware	base/body		buff body, salt glaze ext; brown slip int
906	Lot 59	11/08/94	1	ceramic	jasperware	body sherd	1785-1825	vitreous body, applied relief painted light blue
906	Lot 59	11/08/94	1	ceramic	porcelain	body sherd		molded soft paste, possible figurine fragment
906	Lot 59	11/08/94	1	ceramic	porcelain	body sherd		overglaze enamel floral painted
906	Lot 59	11/08/94	2	ceramic	porcelain	rim/body		undecorated soft paste sherds
906	Lot 59	11/08/94	4	ceramic	red earthenware	base/body		unglazed, flower pot sherds
906	Lot 59	11/08/94	1	ceramic	redware	body sherd		clear glaze int/ext
906	Lot 59	11/08/94	1	ceramic	redware	body spall		brown glaze ext, spalled int
906	Lot 59	11/08/94	1	ceramic	redware	rim sherd		brown mottled glaze int, thick body, flared rim
906	Lot 59	11/08/94	1	ceramic	stoneware	body sherd		gray bodied, orange-brown glaze ext; brown slip int
906	Lot 59	11/08/94	1	ceramic	whiteware	base sherd	1820	undecorated base w/footring, small bowl or cup
906	Lot 59	11/08/94	5	ceramic	whiteware	base sherd	1850	undecorated, hard, thick body
906	Lot 59	11/08/94	2	ceramic	whiteware	base/body	1830	blue transfer prints, floral motifs
906	Lot 59	11/08/94	1	ceramic	whiteware	body sherd	1830	annular decoration blue & white
906	Lot 59	11/08/94	1	ceramic	whiteware	body sherd	1830	annular decoration orange/brown/white
906	Lot 59	11/08/94	2	ceramic	whiteware	body sherd	1830	red painted, 1 w/incised lines, 1 w/floral motif
906	Lot 59	11/08/94	4	ceramic	whiteware	body sherd	1820	undecorated
906	Lot 59	11/08/94	6	ceramic	whiteware	body sherd	1830	blue transfer prints, landscape motifs
906	Lot 59	11/08/94	4	ceramic	whiteware	body spall	1820	undecorated
906	Lot 59	11/08/94	1	ceramic	whiteware	rim sherd	1830	green shell edge decoration, plate rim
906	Lot 59	11/08/94	1	ceramic	whiteware	rim sherd	1844	flow blue transfer print, floral motif
906	Lot 59	11/08/94	2	ceramic	whiteware	rim sherd	1850	undecorated, hard, thick body
906	Lot 59	11/08/94	1	clothing rel	bone	button		1/2" diameter, 5 hole inset, sunken platform
906	Lot 59	11/08/94	1	clothing rel	milk glass	button		1/4" diameter, 4-hole inset; raised dot decoration on face
906	Lot 59	11/08/94	1	clothing rel	milk glass	button		1/4" diameter, 4-hole inset; undecorated
906	Lot 59	11/08/94	24	construction rel	iron	nail fragment		corroded
906	Lot 59	11/08/94	3	construction rel	iron	nail/bolt		corroded
906	Lot 59	11/08/94	1	construction rel	iron	sheet fragment		corroded
906	Lot 59	11/08/94	1	construction rel	mortar	fragment		
906	Lot 59	11/08/94	1	construction rel	window glass	fragment		translucent, green tint, small
906	Lot 59	11/08/94	1	construction rel	window glass	fragment		translucent, yellow tint w/orange stain

Context	Struct.	Date	Count	Class	Material	Element	Tpq/Date	Logo/inscrip/Comments
906	Lot 59	11/08/94	1	construction rel	window glass	fragment		no tint, frosted
906	Lot 59	11/08/94	4	construction rel	window glass	fragment		translucent, light green tint
906	Lot 59	11/08/94	11	construction rel	window glass	fragment		translucent, slight aqua/green tint
906	Lot 59	11/08/94	14	construction rel	window glass	fragment		clear
