

417 WESTERVELT AVENUE HOUSE, HORTON'S ROW, 417 Westervelt Avenue
aka 79 Corson Avenue, Staten Island. Built c. 1880-82; Landmark Site: Borough of
Staten Island Tax Map Block 25, Lot 1.

On August 11, 2009, the Landmarks Preservation Commission held a public hearing on the proposed designation as a Landmark of 417 Westervelt Avenue House, Horton's Row and the proposed designation of the related Landmark Site (Item No. 6). The hearing had been duly advertised in accordance with the provision of law. Eleven people spoke in favor of designation, including Councilmember Kenneth Mitchell and representatives of the Historic Districts Council, Four Borough Neighborhood Preservation Alliance, and Preservation League of Staten Island. In addition, the Commission received one letter in support of designation. The Commission previously held a public hearing on this building on October 1, 1991 (LP-1882).

Summary

Horton's Row, constructed between 1880 and 1882 by Harry L. Horton, is located at the periphery of Fort Hill in northeastern Staten Island at the outskirts of the villages of New Brighton and Tompkinsville. Horton was a prominent resident of Staten Island and had established a successful banking and brokerage firm in Manhattan. He was involved in Staten Island's water supply and rapid transit companies and was a president of the village of New Brighton. Horton's Row consisted of twelve identical attached masonry row houses that were built as affordable rental houses for middle-class families. No. 417 Westervelt Avenue is one of the only four intact houses that survive. The houses were under common ownership until 1908 and by 1901 they had been converted to three-family flats. The vernacular style red brick houses have neo-Grec style elements and feature full-width front porches, angled bay windows and cornices with dentils, angular or curved brackets and square consoles at the porch roof, above the entrance door transoms and bay windows at the first story, and the third story roof. The row is built on a slope with each building rising higher than its neighbor to create a stepped pattern of architectural elements. Due to the row's length and its location on the brow of the hill, it was a notable structure in the neighborhood. Horton's Row represents a rare housing type on Staten Island. Most of the dwellings built in 19th century Staten Island were free-standing single-family frame houses. Other extant examples of attached single-family dwellings dating from this time in the North-Shore villages were constructed for working-class families, making this a rare example of attached masonry row houses in Staten Island.

DESCRIPTION AND ANALYSIS

The Site¹

Horton's Row is located at the periphery of Fort Hill in northeastern Staten Island at the outskirts of the villages of New Brighton and Tompkinsville. Prior to settlement by Europeans, there was a small Native American encampment near this location.² The development of this section of Staten Island was first promoted by Daniel D. Tompkins. A governor of New York and later vice-president of the United States, Tompkins (1774-1825) spent considerable time on the island during the War of 1812 overseeing fort construction in his capacity as the Commander-in-Chief of the New York State troops. Attracted by the island's natural beauty, he began purchasing large tracts of land in northeastern Staten Island in 1814. In 1815, he moved to Staten Island and started the development of the village of Tompkinsville. Realizing that transportation would significantly aid the development, he procured the incorporation of the Richmond Turnpike Company to establish a highway from the New Blazing Star Ferry to Tompkinsville along the route of present-day Victory Boulevard. In 1816, he acquired an interest in the steamboat monopoly of Fulton and Livingston and the following year established regular ferry service between Staten Island and Whitehall Street in New York City. In the following year, Tompkins, as governor of New York, signed the "Final Abolition Act" that freed all slaves living in the state by 1827. Although Tompkins is known as an abolitionist, the 1800 U. S. Census lists a Daniel D. Tompkins living in the 1st Ward in New York City as having one enslaved person in his household. Tompkins borrowed heavily to finance his various enterprises in Staten Island, expecting to be reimbursed for expenses he had incurred on behalf of the government during the War of 1812. When the promised repayment stalled in Congress, it became apparent that he was overextended. In 1823, St. Andrew's Church foreclosed on the property that it had sold to Tompkins and following his death in 1825 other creditors brought suit against his estate. The remainder of his Staten Island property was sold at auction in the late 1820s and early 1830s.

In 1830, Dr. John S. Westervelt (1799-1869), the first health officer of the port of New York, who had married Daniel Tompkins's daughter Hannah, purchased a ninety-eight acre tract that formerly had been part of her father's estate. The Westervelts moved into Daniel Tompkins's house (demolished) on Fort Hill near the present-day intersection of Fort Place and Sherman Avenue. To provide access to this property from Richmond Terrace and the dock at the foot of Jersey Street, Dr. Westervelt had a lane opened that eventually became Westervelt Avenue. In 1870, the year after Dr. Westervelt died, his widow Hannah and their son Tompkins, as executrix and executor of his estate, conveyed three lots to Harry L. Horton and Frank S. Cornish.³ The contiguous lots had street frontage on Westervelt Avenue, First Avenue (now Corson Avenue) and Sherman Avenue.⁴ Frank Cornish and his wife Katie Cornish conveyed their interest in the property to Horton in 1874.⁵ Horton built the twelve identical row houses that were known as Horton's Row c. 1880-82.⁶

Harry L. Horton⁷

Harry Lawrence Horton was born in Bradford County, Pennsylvania in 1832 and after working as a produce and grain commission dealer in Milwaukee, he moved to New

York in 1865. He established a successful banking and brokerage concern, H. L. Horton & Company, which was located at 56 Broadway in Manhattan. After moving his residence to New Brighton and building a large suburban residence on nearby Third Avenue (now Winter Avenue), Horton became involved in the Staten Island's water supply and rapid transit companies. He constructed and operated water plants in Staten Island, which he then sold to the city, and was a president of the village of New Brighton. There are no other known examples of speculative residential real estate development by Horton. At the time of his death in 1915, he was living on West 57th Street in Manhattan.

Early Owners and Residents

These houses were built as rental housing and remained under common ownership until 1908. Early census and directory records indicate that the houses were occupied as single-family dwellings;⁸ but by 1905, the houses were occupied as three-family multiple dwellings.⁹ Department of Buildings records refer to the houses as "old law tenements," which would indicate that they became multiple dwellings sometime before April 12, 1901.¹⁰

Harry L. Horton and his wife Sarah L. Horton sold the houses to Ann Eliza Timpson in 1891.¹¹ The houses had several owners after Timpson and were purchased by Caroline Uhlig, who appears to be the first owner to reside in one of the houses, in 1904.¹² Uhlig sold the adjacent vacant land behind and to the east of the row, which is located on Corson and Sherman Avenues, to Frederick Ruth Realty Co. in 1908¹³ and is the first owner who did not sell all twelve houses together.¹⁴

The Trow's and Webb's Consolidated Directories of 1882-83 are the first directories in which Horton's Row is listed.¹⁵ Early residents included Mrs. Lucy Livingston and her four adult sons¹⁶ at No. 5 Horton's Row (No. 403 Westervelt); Edward Alfred Sargent, an architect with an office in New York, at No. 7 (No. 407); William V. Woodworth, a businessman and his step-mother, Mrs. Sophia L. Woodworth¹⁷ at No. 8 (No. 409) and Frederick S. Cozzens, an artist who lived and worked at No. 10 (No. 413).¹⁸ Edward Sargent (1842-1914) was one of Staten Island's most notable architects at the end of 19th century. After 1880, he became a permanent resident of Staten Island, living in Tompkinsville until around 1905.¹⁹ Sargent designed the Baltimore & Ohio Flats, an attached row of five three-family brick flats, which were built in 1885 and located at the foot of Victory Boulevard near the former ferry landing. These buildings, along with Horton's Row, were among the earliest examples of attached, masonry dwellings in Staten Island. They were demolished in 1984.

The earliest known reference to occupants, who apparently are not related to each other, living in the same house in Horton's Row is in the 1886 Webb's Consolidated Directory.²⁰ Rev. Francis M. Kip and John V. W. Vanderboort²¹ are listed as living at No. 2 Horton's Row (No. 397) and Daniel J. Gasherie, miner, and Oscar W. Reed, cashier, are listed as living at No. 9 (No. 411), while William Patten, real estate agent, had his office at No. 9.²² The 1900 U.S. Census indicates that there were two separate household units in No. 417 (12 Horton's Row).²³ Selena Denton lived in one unit with her husband David and ran a boarding house that had five boarders (three of which were part of the same family) and one servant. The other unit in the house was referred to as "12 rear" and was occupied by Putnam Drew, a journalist, and his family.

Design and Construction

Horton's Row is a very early example of attached masonry row houses in Staten Island. Its architect has not been determined. Since the island was not well populated until the 20th century, most of houses predating that time were free-standing single-family frame houses. Lying at the periphery of the prosperous Fort Hill suburb and within easy walking distance of the ferry terminal, then located at the foot of Richmond Turnpike (now Victory Boulevard), Horton's Row was intended to offer affordable rental housing to middle-class families. Although there are other examples of single-family attached houses built in the 19th century in the North-Shore villages, they were for working-class families. Historic views of Fort Hill reveal that these buildings were an anomaly in its neighborhood and a visual landmark due to their massing and location on the brow of the hill. Horton's Row represents a rare building type on the island.

All twelve houses had identical front facades and except for No. 417, had identical rear facades, when built. These three story vernacular style houses had neo-Grec style details. The neo-Grec style was popular in the second half of the 19th century and is characterized by stylized, classical details, angular forms and incised detailing. The red brick houses were built with two bays at the first story and three bays at the second and third stories. They had full-width brick porches with flat roofs supported by single columns on square pedestals and had iron railings with a criss-cross design. All had wood-and-glass double-leaf entrance doors with wood-and-glass arch-headed transoms and a rectangular molded wood surround in the north bay of the first story and a three-window-wide angled bay in the south bay. The second and third stories had three single window openings with one-over-one double-hung wood windows and smooth stone lintels and sills. Neo-Grec style cornices with dentils, angular or curved brackets and square consoles appear around the front porch roof, above the transoms and bay windows at the first story and the third story roof. The rear facades of the buildings appear one story higher than the front because the land slopes down to the east. All the buildings were built with full-width rear yard additions at the sub-basement, basement and first story that had six narrow one-over-one windows at the basement and first story; except for No. 417, which had an angled brick rear yard addition at the sub-basement, basement and first story with one window at each story on the east (rear) and south elevations. Above the rear yard extensions, there were three single windows at the second story of the rear facades and pitched roofs with three dormers having surrounds with pilasters and segmental-arched lintels and single one-over-one double-hung windows. Since the row is built on a slope, each building, in descending address order, rises higher than its neighbor, creating a stepped pattern of architectural elements. The ensemble is knit together by the ornamental wrought-iron fencing along the edge of the shallow front yards.

Subsequent History

This area of Staten Island continued to develop as a residential neighborhood following the integration of ferry and train service in the 1880s, and Staten Island's 1898 consolidation into the City of New York. The neighborhood's close proximity to the newly created Borough Center at St. George, an important road terminus and port for the ferry to Manhattan, helped maintain its status as an important "suburb."²⁴

No. 417 had several owners after Caroline Uhlig until it was purchased by Albert I. and Flora B. Lederman in 1922.²⁵ Members of the Lederman family owned this house, as well as No. 411, 413 and 415, until 1960.²⁶ Albert L. Lederman, an electrical contractor, and his wife Flora B. Lederman were German immigrants. They lived at No. 415 with their children in 1915, moved to No. 413 by 1920 and then moved to No. 417 by 1925.²⁷ These four houses remained under common ownership until 1982, when owners Robert Fitzsimmons and Isadore Ronenson sold them to separate parties.²⁸

Description

417 Westervelt Avenue is located on an irregular shaped lot at the northeast corner of Westervelt Avenue and Corson Avenue. The front concrete and bluestone areaway is enclosed with a historic wrought-iron fence, gate and cast-iron posts set on a concrete, brick and bluestone curb that rises to north because the row is built on a slope. The southern post adjacent to the gate has been replaced, as has the northern-most finial on the gate and the two northern-most pickets on the fence. There is one brick step from the sidewalk to the areaway, a tree in the areaway, and four granite steps from the areaway to the porch. The house has three stories and a basement at the front façade and is constructed of red brick. The full-width brick porch was damaged in a fire and the present porch roof, cornice, columns and railings, which were designed to replicate the porch at No. 415, were installed in 2005.²⁹ The porch has paired round slender Doric columns, balustraded railings and a cornice with dentils, curved brackets, and square consoles. A rectangular wood window with a metal grille is located at basement in the center of the façade beneath the porch. The house has two bays at the first story and three bays at the second and third stories. In the northern bay at the first story is a double-leaf wood-and-glass entrance door with arched-headed wood-and-glass transom and a molded, rectangular surrounded with a cornice having dentils, curved brackets and square consoles that continues around the bay window. The three-window-wide angled wood bay in the southern bay at the first story, which has wood sash and metal grilles and paneled wood panels below, replicates the original bay window and was installed in 2005 after the house was damaged in the fire. The second and third stories have three single window openings with smooth stone lintels and sills that are original. The windows at the second and third stories have metal replacement sash and panning. The roof cornice with dentils, angular brackets and square consoles is similar to the porch and first story cornices. At the second story of the southwest corner of the house are brownstone plaques that are inscribed with “Westervelt Av” on the front façade and “First Av” on the south façade facing Corson Avenue. The two light fixtures on either side of the entrance door are not historic. There is a metal pole at the first and second stories and exposed conduit at the second story.

The south façade facing Corson Avenue has a full-height red brick angled bay at the center of the façade that was constructed c. 1922,³⁰ the southern elevation has triple windows at each story and the eastern and western elevations have single windows at each story. The windows are recessed in the bay and there is brick corbelling above the third story windows. All the windows in the bay have brick header lintels and sills and the basement windows have metal security grilles. A concrete plaque inscribed with “L 1922” is located below the triple window at the first story. There is a bay of windows at the western and eastern ends of the south façade; a paired window with brick lintels and

sills³¹ and metal window grilles at the basement and single windows at the first through third stories with smooth stone lintels and sills on the western end, and single windows with smooth stone lintels and sills on the eastern end. All the windows at the south façade have metal sash and panning. A basement door opening beneath the porch was installed in 1933.³² The opening has a wood-and-glass door with a metal-and-glass storm door. A concrete walkway leads to the basement door with a concrete with stone aggregate, stone and bluestone retaining wall to the west and a bluestone curb to the east. Above the door is a non-historic light fixture and leader and besides the door is a doorbell and an electrical outlet.

Since the land slopes down to the east, the rear façade is one story taller than the front façade. A full-height, full-width red brick rear yard addition replaced the original rear yard addition c. 1922 and has notched brick corners at the southern elevation.³³ The southern elevation of the rear yard extension has one bay of windows and the sub-basement window has been sealed with brick infill. There are four diamond-shaped metal ties to the west of the basement window. There are two bays at each story on the eastern elevation. The sub-basement has a non-historic door with metal gate and a window opening that has been sealed with brick infill and a small metal vent. All the windows at the rear yard extension have metal sash and panning and smooth stone lintels and sills. There is a light fixture above the door, a remote utility meter and a utility meter near the door, and exposed conduit between the sub-basement and basement. The rear façade has a metal leader and a metal fire escape with a ladder to the roof that are not original to the house.

The front yard historic metal fence continues around the side yard on Corson Avenue and is set on a concrete and bluestone curb; the gate in front of the door underneath the porch appears to be non-historic. There is a metal fence that appears to be historic but may not be original to the house at the rear yard on a concrete curb with a metal gate and brick piers that appear to be non-historic. The easternmost section of the fence is set between brick piers and appears to be non-historic. The side yard had planting areas and the rear yard is slate with a planting area. There is a wood fence at the northern and eastern lot lines of the rear yard.

⁴ Lots 105, 106 and 107 on file map (number 228) of the property in Castleton, Richmond County belonging to John S. Westervelt, Esq., surveyed by George M. Root in 1864 and filed in the Richmond County Clerk's Office on August 10, 1867. The three contiguous lots contained approximately 4,490 square feet and measured approximately 270 feet on Westervelt Avenue, approximately 268.8 feet on First Avenue (now Corson Avenue, including the whole street frontage between Westervelt Avenue and Sherman Avenue) and approximately 230 feet on Sherman Avenue.

⁵ Richmond County, Office of the Register, Liber Deeds and Conveyances, Liber 108, page 581.

⁶ The addresses (1-12 Horton's Row) do not appear in the U.S. Census for 1880 but they do appear in *Webb's Consolidated Directory of the North and South Shores, Staten Island 1882-83*, which was published in 1882. The buildings were originally known as 1-12 Horton's Row, and then 271-293 Westervelt Avenue and about 1905 were given their current street addresses, 395-417 Westervelt Avenue. Three of the houses have been demolished (Nos. 401, 403 and 405) and the front facades of five have been significantly altered (Nos. 393, 395, 397, 407 and 409).

FINDINGS AND DESIGNATION

On the basis of a careful consideration of the history, the architecture, and other features of this building, the Landmarks Preservation Commission finds that 417 Westervelt Avenue House, Horton's Row has a special character and a special historical and aesthetic interest and value as part of the development, heritage, and cultural characteristics of New York City.

The Commission further finds that, among its important qualities, 417 Westervelt Avenue House, Horton's Row represents a rare housing type on Staten Island; that Horton's Row was built c. 1880-82 by Harry L. Horton and is located at the periphery of Fort Hill in northeastern Staten Island at the outskirts of the villages of New Brighton and Tompkinsville; that Horton was a prominent resident of Staten Island and had established a successful banking and brokerage firm in Manhattan; that he was involved in Staten Island's water supply and rapid transit companies and was a president of the village of New Brighton; that Horton's Row consisted of twelve identical attached row houses that were built as affordable rental houses for middle-class families; that No. 417 Westervelt Avenue is one of the only four intact houses that survive; that the houses were under common ownership until 1908 and by 1901 they had been converted to three-family flats; that the vernacular style red brick houses have neo-Grec style elements and feature full-width front porches, angled bay windows and cornices with dentils, angular or curved brackets and square consoles at the porch roof, above the entrance door transoms and bay windows at the first story, and the third story roof; that the row is built on a slope with each building rising higher than its neighbor to create a stepped pattern of architectural elements; that due to the row's length and its location on the brow of the hill, it was a notable structure in the neighborhood; that most of the dwellings built in 19th century Staten Island were free-standing single-family frame houses; and that other extant examples of attached single-family dwellings dating from this time in the North-Shore villages were constructed for working-class families, making this a rare example of attached masonry row houses in Staten Island.

Accordingly, pursuant to the provisions of Chapter 74, Section 3020 of the Charter of the City of New York and Chapter 3 of Title 25 of the Administrative Code of the City of New York, the Landmarks Preservation Commission designates as a Landmark 417 Westervelt Avenue House, Horton's Row, 417 Westervelt Avenue aka 79 Corson Avenue, Borough of Staten Island, and designates Staten Island Tax Map Block 25, Lot 1, as its Landmark site.
